BEYONDTECH X DTU CONSULTING GROUP CASE COMPETITION 2026 | RESEARCH DELIVERABLE

BeyondTech: From a DTU Habit to a Tier-1 System

A go-to-market plan to deepen BeyondTech's penetration at DTU and launch at four new Tier-1 campuses: BITS Pilani, NIT Tiruchirappalli, PEC Chandigarh and COEP Technological University, Pune

Team IdeaForge
Harsh Kawatra, Delhi Technological University
Anuj, Delhi Technological University

BeyondTech x DTU Consulting Group Case Competition 2026

Contents

Contents

0. Document control

1. Brief coverage matrix: every ask, where it is answered and on which slide

2. The answer on one page: a proof loop on every campus, not more awareness

3. BeyondTech today: 300+ students mentored on one founder's weekends

4. What the three links reveal that the brief does not

5. The demand: why non-tech roles matter more to a Tier-1 engineer in 2026

6. The student: four segments, three buying windows and the months when intent peaks

7. Competition: who else sells structure, at what price and with what promise

8. DTU in numbers: 2,608 students a year and a non-tech pool of about 1,956

9. Where the DTU engine leaks: five breaks between a student who has heard of BeyondTech and one who enrols

10. The DTU society map: 16 societies, their reach and what each is good for

11. The DTU plan: eleven channels in three layers, sequenced to the campus calendar

12. The DTU budget: ₹3.5 lakh, 21% organic, and why that split is an output

13. Defining Tier-1 and the longlist: 24 institutes plus four IITs for contrast

14. The scorecard: seven criteria, one formula, 29 colleges

15. The four picks: BITS Pilani (Pilani campus), NIT Tiruchirappalli, PEC Chandigarh and COEP Technological University, Pune

16. Pick dossiers: calendar, recruiters, societies and the entry wedge on each campus

17. Trust from zero: borrow it, seed it, earn it, then hand it over

18. The 90-day launch playbook for one campus

19. The ambassador flywheel: customers first, a ladder second, cash last

20. Economics of expansion: each campus pays back in season 1 in the base case

21. The twelve-month roadmap: two waves, five campuses, one calendar

22. Measuring it: one north star and the numbers that would prove us wrong

23. Risks and rules: twelve risks, a mitigation each, and the claims BeyondTech can and cannot make

24. Assumptions register

25. Slide blueprint

26. Anticipated judge questions

27. Method, limits and the validation we would run next

Appendix A: Bibliography

Appendix B: Model tables

T1 DTU addressable funnel

T2 DTU baseline penetration

T3 DTU channel plan (base scenario, pre-funding)

T4 DTU budget and organic/paid split (base scenario)

T5 Month-by-month calendar (base scenario, Oct 2026 to Sep 2027)

T6 DTU scenarios: bear, base, bull

T7 Sensitivity tornado on DTU contribution (base contribution ₹9,35,350)

T8 College scorecard: Fit score, screen result and rank

T9 Stability test (2000 weight draws, seed 20261009)

T10 Per-campus launch P&L (final 4 picks, seasons 1 and 2)

T11 Founder hours: today vs after the plan

T12 12-month roll-up: DTU plus four campuses

T13 KPI targets by month

T14 Kill and scale thresholds (bear scenario, first pick)

T15 Price sensitivity (base scenario, first pick)

T16 Assumptions register

Appendix C: College dataset

Appendix D: Society and competitor datasets

Appendix E: Glossary

Appendix F: Data conflicts and rulings

From the brief transcription (PLAN.md section 3.3)

New conflicts from Lane A (BeyondTech and its founder)

New conflicts from Lane B (DTU)

New conflicts and gaps from Lane C (demand for non-tech roles)

Gaps carried forward, not resolved at this gate (no fabrication, flagged for later lanes or the lead)

Gate G1, continued (10 Oct 2026, after Lanes D, F, G)

Gate G1, final pass (10 Oct 2026, after Lanes H, I, J)

Confirmed, no action needed

0. Document control

Answer. This document is the research base for a go-to-market plan for BeyondTech, a non-tech placement accelerator for Tier-1 B.Tech students, built for the BeyondTech x DTU Consulting Group (DCG) Case Competition 2026. It exists so that every number on the eventual Figma deck traces back to a cited fact, a dated source or a named assumption, and so that a judge or the founder can check any claim in under a minute. It was researched and drafted by Claude based AI agents working under the direction of Team IdeaForge (Harsh Kawatra and Anuj, both Delhi Technological University), and every section below states this plainly rather than leaving it implicit.

0.1 Purpose and reader

The deck that follows this document has one job: convince the judges and the founder, Harsh Agarwal, that BeyondTech's next twelve months should be spent distributing proof rather than buying awareness. This document is the evidence locker behind that argument. Three readers are expected. The DCG student judges will read this to check that the scorecard logic in section 14 to 16 is not decoration over an unsupported gut call. The founder, Harsh Agarwal, will read this to see his own business described back to him with numbers he has not seen assembled in one place, consistent with the organiser playbook's own rule that a winning deck teaches the founder something he did not already know [P01]. A third reader, Team IdeaForge's own future selves, will use this document as the single place to check a number before it is typed onto a slide, per the case decoded (`PLAN.md` section 2.1): a headline figure that changes once must be changed everywhere it appears, and this document is the place that change is checked against.

0.2 Tag legend

Every quantitative claim in this document carries one of the following tags immediately after it, per `PLAN.md` section 2.4. A claim with no tag is a drafting error, not a deliberate choice.

Tag	Meaning	Lives in
`[B ##]`	A fact stated in the case brief itself	`case/01-beyondtech-brief.md`
`[W ##]`	A finding from BeyondTech's public footprint (website, LinkedIn, Topmate), superseded wherever a matching `[RA ##]` exists	`case/02-beyondtech-public-footprint.md`
`[P ##]`	A rule drawn from the DCG organiser playbook	`case/03-organiser-playbook-digest.md`
`[S###]`	An external source, news, aggregator, official document or regulator page	`research/raw/sources.md`
`[D college.Cn]`	One cell of the college scorecard dataset	`research/data/college_scorecard.csv`
`[A##]`	A team assumption with a bear, base and bull value	`PLAN.md` section 5.3 and the model
`[M T#]`	A model output table	`model/model_tables.md`
`[V ##]`	A verbatim, attributed public student-voice quote	`research/raw/R-I-student-voice.md`
`[RX##]`	A raw lane fact row, the primary tag for anything drawn from a lane file, cross-referenced to an `[S###]` where useful	`research/raw/R-*.md`

A number is never written without one of these tags, and an assumption is never written without the word "assumption" or "est." appearing once in the paragraph that carries it, per the writer brief's content rules.

0.3 Source hierarchy

`PLAN.md` section 6.2 ranks eight tiers, highest first: the case brief; BeyondTech's own pages; official institute documents (NIRF data submissions, placement brochures, annual reports); regulators and statutory bodies; recruiter and competitor company pages; national press; aggregators (Collegedunia, Shiksha, Careers360, Getmyuni); and finally blogs and forums. A figure resting only on tier 7 or 8 is labelled "aggregator reported" wherever it is used and carries "est." framing on a slide. This hierarchy is why, for instance, DTU's graduated and placed cohort figures are cited to its own NIRF 2025 submission [RB07] rather than to an aggregator, even though the aggregator's figures are easier to find.

0.4 Verification status counts by lane

Nine research lanes (A through J, skipping E, which is reserved for the eight per-pick dossiers) and eight dossiers produced the fact base behind this document. Each lane file tags every row `VERIFIED` (seen directly on a fetched page), `VERIFIED (search result only)` (seen in a search snippet, the page itself not fetchable), `CORRECTED` (a seed fact was wrong and is replaced), `NOT FOUND` (searched for, not found), or `NOT FETCHED` (the page exists but blocked automated access). The table below tallies each lane's own Facts table. Rows

with a compound status (for example, one answer rendered while five did not, within a single table row) are counted once per status they carry, so lane subtotals can exceed the lane's row count by a small margin; this is noted rather than hidden.

Lane or dossier	VERIFIED	VERIFIED (search only)	CORRECTED	NOT FOUND	NOT FETCHED
A, BeyondTech and the founder	42	0	5	5	4
B, DTU	36	11	0	0	1
C, demand for non-tech roles	1	73	1	2	0
D, competitors	16	40	1	0	0
F, channel and funnel benchmarks	25	22	1	10	0
G, expansion and trust precedents	12	45	2	6	0
H, rules and claims	13	41	0	3	0
I, public student voice	0	37	0	0	0
J, map and logo assets	63	0	0	3	0
E, BITS Pilani dossier	3	29	0	8	0
E, BITS Pilani Goa dossier	4	18	0	5	0
E, NIT Tiruchirappalli dossier	19	6	4	8	0
E, NIT Warangal dossier	15	8	1	12	0
E, PEC Chandigarh dossier	7	22	0	8	1
E, COEP Pune dossier	6	15	0	6	0
E, IIT Delhi dossier	7	12	1	6	0
E, IIT Roorkee dossier	5	15	0	6	0
Total	**274**	**394**	**16**	**88**	**6**

Three honest reads of this table. First, more than half of all rows (394 of about 778) are "search result only", meaning the underlying page could not be fetched directly and the fact rests on a search engine's own snippet; this is the expected shape of desk research into institute placement pages, most of which sit behind JavaScript rendering or anti-bot walls, and every such row is still a real snippet, not a paraphrase. Second, Lane I (public student voice) is entirely search-result-only by its own method note, because Reddit and Quora both blocked direct fetches and every quote was pulled through a text-extraction proxy; this is disclosed once here and again in section 27. Third, the dossier lanes carry the highest `NOT FOUND` density (88 of the total sits mostly in dossiers and Lane F), which is unsurprising given each dossier asks about 30 specific facts per campus and not every campus publishes all of them; section 16 reports each dossier's own gap honestly rather than smoothing it over.

0.5 Model version and run date

Every modelled number in this document (`[M T#]`) comes from `BT/model/beyondtech_gtm_model.py`, run on 2026-10-10T13:22:41, which generated `model_outputs.json` and `model_tables.md` (tables T1 through T16) [M T1 to M T16]. No writer recomputes a model number independently; where a writer's own reading of a raw lane file would imply a different figure, the model's locked number wins per the writer brief's "Late corrections" note, and the raw file remains the evidentiary backup, not the citation itself.

0.6 The two Harsh note

Two people named Harsh appear throughout this project and are never allowed to collapse into a bare "Harsh" anywhere in this document. The founder of BeyondTech is **Harsh Agarwal**, referred to as "the founder" or "Harsh Agarwal". The team lead of Team IdeaForge is **Harsh Kawatra**, referred to as "Harsh Kawatra" or "Team IdeaForge". This rule exists per `PLAN.md` section 2.3 because the two names are easy to conflate in a document that discusses both the client and the authoring team, and a conflation anywhere would be the kind of proper noun error the organiser playbook flags as trust destroying [P12].

0.7 AI use disclosure

This document was researched and drafted by Claude based AI agents under the direction of Team IdeaForge. Every fact was gathered by an AI research agent through web search and page fetches, every number was computed by a Python model written and run by an AI modelling agent, and every section of prose was drafted by an AI writing agent working from the fact base and the model's output tables, not from general knowledge. A human lead (Team IdeaForge) set the research plan, ruled on every conflict the agents found

(`research/raw/conflicts.md`), locked the final numbers at each gate, and reviewed the output before submission. No primary research (interviews, surveys, letters of intent) was conducted; section 27 states this honestly and proposes a Customer Validation Plan instead of pretending such research happened.

0.8 Skill calibration note

The content and argument structure behind this deck (the contrarian recommendation pattern, the governing thought, the moneyshot, foreshadowing and symmetric treatment) were engineered using the `case-competition-deck` skill, run in generate mode before any Figma node is drawn, per `PLAN.md` section 0 and section 4.1. That skill's structural and rhetorical patterns are corpus derived from three M&A case decks from the Harvard GCCH competition. For a marketing and go-to-market case, which is what this case actually is, those frameworks are treated as plausible extrapolation rather than a proven fit: the structural and rhetorical patterns (one contrarian move per pillar, one moneyshot, foreshadowing across slides, symmetric treatment of parallel items such as the four college picks, three-scenario discipline, a closing "THEREFORE" synthesis) are used with confidence because they describe how any persuasive analytical deck is built, independent of case type. The case-type-specific framework menu (which named frameworks to reach for) is used with less confidence and is cross-checked against the marketing and strategy case-type guides specifically, rather than assumed to transfer unchanged from an M&A context. This document states that distinction once here, per the skill's own calibration honesty guidance, rather than presenting every pattern with equal certainty.

0.9 Document map

Part	Sections	Writer	What it covers
Opening	0 to 4	W-A	Document control, the brief coverage matrix, the one-page answer, BeyondTech today, the three-links insight
Demand and students	5 to 7	W-B	Why non-tech roles matter, student segments and buying windows, the competitive set
DTU plan	8 to 12	W-C	DTU's own numbers, the funnel leaks, the society map, the eleven-channel plan, the budget
College selection	13 to 16	W-D	The Tier-1 definition and longlist, the scorecard, the four picks, the per-pick dossiers
Launch and economics	17 to 20	W-E	Trust from zero, the 90-day playbook, the ambassador flywheel, expansion economics
Roadmap and method	21 to 27	W-F	The twelve-month roadmap, measurement, risks, assumptions, the slide blueprint, judge questions, method
Appendices	A to F	generated by `assemble.py`	Bibliography, model tables, college dataset, society and competitor datasets, glossary, conflicts and rulings

---

1. Brief coverage matrix: every ask, where it is answered and on which slide

Answer. Every numbered ask in the case brief (B01 through B21) is answered somewhere in this document and lands on a specific slide of the twelve-slide deck; the table below is the audit trail a judge can use to check that nothing in the brief was skipped. The five scoring criteria map cleanly onto five blocks of this document, with DTU GTM (30%) and the two college-selection and pan-India criteria (25% each) carrying the heaviest evidentiary weight, and insight and creativity (10%) running as a cross-cutting thread rather than one isolated section. The honest gap is that the evidence base thins in three specific places: `societies.csv` is filled to 16 of its 30-row target, Lane I's public-student-voice coverage is skewed almost entirely to NSUT and one other campus rather than DTU, and DTU itself has no public student-voice quote at all under this project's platform rules.

1.1 Brief ask to section and slide

B-ID	Ask or fact	Answered in section(s)	Stage 2 slide
B01	Company description: non-tech placement accelerator for Tier-1 B.Tech students	3	1 (cover), 2
B02	Task: GTM strategy for two pillars, DTU penetration and pan-India expansion	2	2

B-ID	Ask or fact	Answered in section(s)	Stage 2 slide
B03	Format: 8 to 12 slide deck, excluding title and appendix	25	n/a, a format constraint satisfied by the deck's own 12-slide structure (1 cover, 9 core, 1 appendix, 1 thank you) rather than argued on any single slide
B04	At-a-glance proof point, "40 selections across 14 organisations"	3, 4 (conflict X1)	3
B05	Results table: DTU 50+ selections, average 13 to 14 LPA, highest 47 LPA at Eternal, named firms	3	2, 3
B06	NSUT and Thapar and BIT Mesra recruiters, including the unidentified "Prism"	3	3
B07	Flagship offer: 11-week, four-phase bootcamp	3, 5	2, 5
B08	Company-specific PYQs, weekly mocks, off-campus guidance and referrals	3, 5	5
B09	Positioning, "one course for every non-tech company visiting your campus"	3	2, 7
B10	Growth engine: word-of-mouth, community, founder-led mentorship	3, 4	3
B11	Core problem: strong recall, informal and founder-tied engine	3, 9	3
B12	Bottleneck 1, TAM limitation (narrow audience, not every campus has non-tech recruiters)	3, 13, 14	3, 7, 8
B13	Bottleneck 2, channel dependency, no paid marketing or ambassador flywheel	3, 9, 11	3, 5
B14	Vertical 1 ideas: societies, departments, placement cell, paid ads, influencers, mock drives	10, 11	5
B15	Vertical 1 deliverable: DTU GTM plan with an organic and paid budget split	11, 12	5, 6
B16	Vertical 2 context: almost no recognition outside the four core campuses	13	8
B17	Vertical 2 pick method: scorecard on recruiters, societies, placement timeline	14	7
B18	Vertical 2 launch without a local founder: ambassadors, society tie-ups, ads, alumni stories	17, 18	8, 9
B19	Vertical 2 deliverable: 3 to 4 picks with a one-line reason and a launch GTM	15, 16, 18	7, 8, 9
B20	Scoring weights, 30 / 25 / 25 / 10 / 10	1.2 below	all nine core slides, weighted per 1.2
B21	The three embedded hyperlinks (website, company LinkedIn, founder LinkedIn)	3, 4	11 (appendix sources)

1.2 The five scoring criteria mapped to sections

Criterion	Weight	Primary sections	Primary slides
DTU GTM plan (channel mix, budget split, realism)	30%	8, 9, 10, 11, 12	3, 5, 6
College selection (scorecard logic and numbers)	25%	13, 14, 15, 16	7
Pan-India launch plan (entry approach, trust from scratch)	25%	17, 18, 19, 20	8, 9
Insight and creativity (understanding students, fresh ideas)	10%	2, 4, 6, 9, 17 (cross-cutting, the insight bank I1 to I10)	3, 8
Presentation quality (clarity, structure, tone)	10%	25, plus the visual execution of every slide	all

The weighting in the right-hand description is deliberately qualitative rather than a second set of invented percentages: insight and creativity do not get their own slide because the brief's own weighting table [B20] treats them as a quality of the whole deck, not a section of it. The strongest single insight carrying the 10% (insight and creativity) is the ambassador-post-against-intern-post comparison (I4, section 4) and the recruiter-overlap index used to pick colleges (I9, section 14), both of which are the kind of outside-in exhibit the organiser playbook asks for [P01].

1.3 Where the evidence is thinnest

Three places in this research base are honestly thin, and this document does not paper over any of them.

Thin spot	Scale of the gap	How this document handles it
`societies.csv` **row coverage**	16 of a 30-row target filled [Lane B, `conflicts.md` gap note]	Section 10 uses the 16 filled rows only, reports the shortfall by name, and does not stretch a handful of well-evidenced rows into a claim of comprehensive society coverage
Lane I public-student-voice campus coverage	Of 37 verified quotes, only NSUT (6) and NIT Surathkal (2) carry a named campus; DTU itself yielded zero [`conflicts.md` ruling I-R1]	Quotes are framed as general engineering-student sentiment, never as DTU-specific or longlist-specific, wherever this document draws on them
DTU-specific named student voice	One named source only, the 180DC DTU Substack interview [`conflicts.md` ruling I-R2]	Used by name, separately from the anonymous quote table, and never treated as a sample rather than a single data point

First, `research/data/societies.csv` holds 16 of its 30-row target. The eight bare-name-only DTU societies that Lane B could not flesh out beyond a name (Enactus DTU, Round Table DTU, Kalakriti DTU, AIMS-DTU, Semicon DTU, EMCEE DTU, ACM DTU and Deb Soc DTU) and a continuing shortfall in product, analytics and department-specific societies remain open per `conflicts.md`'s own gap note. Section 10 uses the 16 rows that exist, reports the gap plainly, and does not stretch six well-evidenced society rows into a claim of comprehensive coverage.

Second, Lane I's public student-voice sample of 37 verified quotes is almost entirely campus-unspecified: only NSUT (6 quotes) and NIT Surathkal (2 quotes) are tied to a named campus, and DTU itself produced zero quotes under this lane's platform and attribution rules [RII per conflicts.md ruling I-R1]. Wherever section 6 or section 10 draws on this lane, it is framed as general engineering-student sentiment gathered from Quora, never as DTU-specific or longlist-college-specific finding, because the lane's own coverage genuinely does not support that narrower claim.

Third, and following directly from the second point, there is no DTU-specific anonymous student voice at all. The one exception, used separately rather than folded into the anonymous quote table, is a named, consenting, published interview with a DTU alumnus and now Bain analyst, carried in a 180 Degrees Consulting DTU Substack post dated 6 June 2025 [conflicts.md ruling I-R2]; this single named source carries real weight precisely because it is attributable, but it is one data point, not a sample, and sections 6 and 10 treat it that way.

---

2. The answer on one page: a proof loop on every campus, not more awareness

Answer. BeyondTech's problem is not that DTU or any new campus has never heard of it; recall at DTU is already strong [B11]. The problem is that the proof of BeyondTech's results (50 plus selections, named recruiters, a specific results table) never travels past the handful of students a referral chain happens to reach. The fix argued across this entire document is a calendar-locked proof loop run identically on every campus: capture students earlier and more broadly at DTU, and enter only new campuses where BeyondTech's existing company-specific question bank already applies, borrowing a society's trust before spending a rupee on an ad.

2.1 The governing thought

> BeyondTech does not have an awareness problem at DTU or a brand problem elsewhere; it has a proof distribution problem, so it should turn each campus into a calendar-locked proof loop: capture second and third years through societies and mock drives before the referral reaches them at DTU, and enter only those new campuses where its existing recruiter question bank already applies, borrowing a society's trust first and earning its own with a founding cohort.

This sentence is the one the founder could repeat to a stranger, per the skill's own pattern for a governing thought. Every number in this document either supports it directly or is the honest exception that qualifies it.

2.2 The three contrarian moves

The brief itself invites three "obvious" answers (run ads for awareness, pick the most famous colleges, recruit ambassadors first). Each one is weaker than it looks once the research base is read closely, and each has a different, evidence-backed answer.

Pillar	The obvious answer the brief invites	Why it falls short	The answer this document argues
DTU	Spend on Instagram and LinkedIn ads to build awareness	The brief itself says recall is already strong [B11]; a roughly 2,600-student-per-year campus [RB01, model T1] is too small a pool for broad paid reach to pay for itself, and the funnel leaks after awareness anyway: eight lead magnets sit open with no form [RA21, RA24], the sales motion is a 1:1 WhatsApp chat [RA17, RA25], and admission is gated by a fit interview [RA17]	Organic-first at a 21.1% organic to 78.9% paid split that the model derives by ranking channels on cost per acquisition, not by a target ratio chosen in advance [M T3, M T4]. Paid money is spent on retargeting people who already touched an event, a PDF or a mock drive, not on cold prospecting
College selection	Pick the most famous names, the old IITs or BITS Pilani by reputation alone	Fame is not fit. BeyondTech's asset is company-specific preparation for the recruiters that actually visit a given campus [B09, B12]. That asset only transfers where the same recruiters hire, and the four contrast-set IITs tested in this project's own scorecard also run alumni-backed consulting clubs with free casebooks, narrowing the prep vacuum BeyondTech would otherwise fill [`PLAN.md` 4.3, section 14]	Rank every candidate campus by recruiter overlap, non-tech offer depth, society surface, prep vacuum, calendar fit and access, using a weighted formula applied mechanically to all 32 scored institutes, not by brand. No IIT reaches the final four picks on this formula, and the document says so plainly rather than engineering a different outcome either way
Launch	Recruit campus ambassadors first and run ads	BeyondTech's own ambassador recruitment post drew about 15 reactions [RA35, W13], a tenth of the engagement a Founder's Office internship post drew a week later [RA37, W14]. An ambassador with no local result to point to has nothing to sell, and an unknown brand's ad buys a click, not trust	Trust is built in three steps, in order: borrow it from a campus society via a co-branded case league (the exact format BeyondTech is running with DCG right now, RA38), seed it with a subsidised founding cohort, and only then earn an ambassador layer from inside that founding cohort, so every ambassador is a paying customer first

2.3 The four picks, one line each

The college scorecard (section 14) screens 32 institutes (28 longlist plus 4 contrast IITs) against a 600-student batch-size floor, a recruiter-presence floor and an evidence floor, then ranks survivors by a seven-criterion Fit score out of 5.00 [M T8]. Four picks clear every portfolio constraint (at most two within 300 kilometres of Delhi, at least one South pick, at least one West or East pick, at most one campus per multi-campus institute) and hold up under a 2,000-draw stability test [M T9].

Pick	Fit score	Stability	One-line reason
BITS Pilani (Pilani campus)	3.00	100.0%	The single best-evidenced pick in the whole set: a recruiter-overlap score built on BITS Pilani's own "University Statistics 2024-25" document independently naming Bain, Kearney, ZS Associates, Deloitte USI and EY as 2025-26 recruiters [RE Pilani RE... per dossier], and a 100.0% stability score meaning it never drops out of the final four under any plausible re-weighting
NIT Tiruchirappalli	2.65	100.0%	The highest Fit score in the whole model, and the only South-region college that is both a locked pick and a confirmed zero-incumbent-prep campus, no casebook, no competitor ambassador and no institute-run non-tech training found on campus [RE NIT Trichy dossier]
PEC Chandigarh	2.40	97.5%	The North region's fourth pick on a recruiter-overlap score anchored in PEC's own 2024-25 placement report naming ZS Associates, JP Morgan Chase and American Express, one of only three colleges in the whole longlist (besides BITS Pilani and DTU itself) where the recruiter evidence rests on the institute's own document rather than an aggregator, with 97.5% stability, the third-highest in the model [RE PEC dossier]
COEP Technological University, Pune	2.40	97.2%	The only West or East region college that clears the screen and survives the stability test, anchored by a confirmed 741 B.Tech graduates a year [NIRF, RE COEP dossier] and five of the twenty anchor recruiters (EY, Flipkart, KPMG, Deloitte, PwC) already visiting

The reserve bench, reported honestly rather than hidden: BITS Pilani Goa campus (Fit 2.80, excluded only by the one-campus-per-institute portfolio rule, not by merit), NIT Warangal (Fit 2.20), IIT Roorkee (Fit 2.20, stability 5.3%) and IIT Delhi (Fit 2.15, stability 0.0%). No IIT reaches the final four. This is reported plainly, per `PLAN.md` section 4.6's own falsification rule, because it was not engineered either way; the scorecard's own weights, applied mechanically, simply rank old-IIT recruiter overlap and prep-vacuum scores lower than the four picks above, mainly because strong alumni-run consulting clubs at the IITs already fill part of the gap BeyondTech would otherwise occupy.

2.4 The DTU budget and split

The DTU plan spends a total cash budget of ₹3,51,650 in the base case [M T4], split 21.1% organic (₹74,246) and 78.9% paid (₹2,77,405 funded across the paid-channel lines) [M T4]. This split is not a target chosen up front; it falls out of ranking all eleven channels by cost per acquisition and funding the cheapest ones first until the 165-enrolment base-case target is met [M T3, M T4]. Of the four paid channels modelled, only two are actually funded in the base case: Meta retargeting of warm audiences (₹2,67,405 for 68.8 enrolments) and campus micro-influencers (₹10,000 for 32.4 enrolments). The other two paid channels, Meta campus-geofence prospecting and LinkedIn school-targeted advertising, receive ₹0 in the base case because the two cheaper channels already cover the target; this is reported as a finding about channel economics, not a decision to abandon those two channels permanently.

2.5 The moneyshot

> "₹3.5 lakh at DTU buys 165 enrolments at a blended ₹2,131 each, and the 21% of the budget spent organically delivers 39% of them."

This single sentence is the deck's one moneyshot, per the skill's rule that a deck carries exactly one. Its supporting point: two of the four paid channels earn zero funded budget in the base case because the two cheaper channels (Meta retargeting at a ₹3,889 CAC, campus micro-influencers at a ₹309 CAC) already cover the target on their own [M T3, M T4].

2.6 Kill criteria

Each new-campus launch is governed by the same three-checkpoint rule, derived from the bear scenario so that "bear" itself becomes the stop line, not a soft worry [M T14].

Checkpoint	Stop below	Scale above
Day 30, founding-cohort applications	6	14
Day 60, founding-cohort fill	10	12
Day 90, founding-cohort offers secured	2	7

2.7 The 110-word version

BeyondTech already has proof: 50 plus DTU selections this season, named recruiters, a results table most competitors cannot match [B05]. What it lacks is distribution of that proof. At DTU, a ₹3,51,650 organic-first plan (21% organic, 79% paid, both numbers falling out of channel economics, not a target) adds up to 165 enrolments at a blended ₹2,131 each [M T4, M T6]. Outside DTU, four campuses (BITS Pilani, NIT Tiruchirappalli, PEC Chandigarh, COEP Pune) are picked by a seven-criterion recruiter-overlap scorecard, not by rank, and entered through a borrowed-trust, then-seeded, then-earned sequence, never ambassadors first. Each campus pays back inside two seasons in the base case [M T10]. No IIT makes the final four, reported honestly.

2.8 What would change our mind

Per `PLAN.md` section 4.6's falsification rules, this document commits in advance to specific signals that would change the recommendation, not just to defending it after the fact.

If the research showed	Then this document would	What actually happened
Fewer than four non-IIT colleges clearing the screen at a five-of-twenty anchor-recruiter threshold	Relax the threshold to four and log it, never relax the batch-size floor	This happened: only two non-IIT colleges passed at five or more, so the threshold relaxed to four [section 14, `PLAN.md` 4.6]
An old IIT scoring in the actual top four	Report it honestly and let the portfolio rule decide, with weights never retuned to force a different outcome	Did not happen; no IIT reached the top four, and the near-miss is still reported honestly in section 15
DTU's non-tech aspirant pool unsizeable within a factor of two	Report penetration as a range, not a point figure	T1 already reports a range: the serviceable addressable pool runs 1,304 (bear) to 2,608 (bull), base 1,956 [M T1]
Paid cost per acquisition at base case beating organic cost per acquisition	Drop the organic-first framing and let the model's own channel ranking set the slide title	Partly happened: two paid channels (micro-influencers at ₹309) already beat several organic lines on cost, so the framing used throughout is "channels ranked by cost", with the 21/79 split reported as an output, not a target met
A recommended society on any new campus found inactive (no post in six months)	Replace it with the next society in line by reach	Not triggered; section 16's dossiers name only confirmed, currently active societies as the entry door on each campus

3. BeyondTech today: 300+ students mentored on one founder's weekends

Answer. BeyondTech is a two-person-mentor-core, 2 to 10 employee company [RA32] that has turned one founder's weekends into a results table strong enough to anchor a case competition: 300+ students mentored, 250+ placed, across 20+ companies over its lifetime [RA01, W01], and 50+ selections this season at DTU alone [B05]. Its offer is a structured, phase-based bootcamp that maps cleanly onto the rounds non-tech recruiters actually run, its proof points are five named, photographed testimonials, and its funnel today is gated at the point of payment but wide open at the point of discovery, which is both its biggest asset and its biggest leak.

3.1 Company facts, from the brief and from BeyondTech's own pages

BeyondTech is a non-tech placement accelerator for Tier-1 B.Tech students [B01], founded by Harsh Agarwal after his own experience of "placement chaos", random guides and scattered tutorials with no clear path [B01 case narrative]. The company's own site confirms a lifetime base of 300+ students mentored, 250+ students placed and 20+ companies [RA01], founded 2022, headquartered in Delhi, listed as a 2 to 10 employee company with 14 people shown as associated with the company's LinkedIn page [RA32, RA33]. The company's positioning is explicit: "One course for every non-tech company visiting your campus" [B09], and its stated growth engine is word of mouth, community and founder-led mentorship, which the brief itself says is why DTU specifically is so dense with BeyondTech students [B10].

The flagship offer is the "Non-Tech Placement Mastery Program" [B07], described by the brief as an 11-week live and recorded bootcamp across four phases: consulting foundations (guesstimates, case frameworks, profitability and market entry), analytics mastery (SQL at basic, intermediate and advanced levels, plus data cases), product strategy (product cases, root-cause analysis, KPIs and design) and personalised prep (1 on 1 mock interviews, off-campus guidance and off-campus referrals) [B07, B08]. The site's own week-by-week curriculum runs Week 1 (Guesstimates) through Week 12 (a Graduation Project with no new content), which is one week longer than the brief's own 11-week figure [RA14]; this is the site-hygiene inconsistency flagged once in the conflicts table below (X3) and never used as a second duration figure anywhere in this document.

Fact	Figure	Tag
Lifetime students mentored	300+	[RA01, W01]
Lifetime students placed	250+	[RA01, W01]
Lifetime companies	20+	[RA01, W01]
This season's DTU selections	50+	[B05]
This season's DTU average package	13 to 14 LPA	[B05]
This season's DTU highest package	47 LPA at Eternal	[B05]
Company age	Founded 2022	[RA32]
Company size	2 to 10 employees, 14 associated on LinkedIn	[RA32, RA33]

Delivery capacity today is a single weekly live cohort stream: live classes every Saturday from 7 to 8 PM, doubt sessions every Sunday from 6 to 7 PM, with recorded classes released weekly and available on demand [RA19, W04]. The next batch starts 15 January 2027 [RA18, W05], a date that anchors the entire GTM calendar modelled in sections 11, 12 and 21: every DTU activation and every new-campus founding cohort is sequenced against this single fixed date.

3.2 The offer mapped to which recruiter round it prepares for

BeyondTech's four-phase curriculum is not a generic skills course; each phase maps onto a specific stage of the selection process non-tech recruiters actually run on Tier-1 campuses, which is precisely the mechanism behind its own positioning line [B09].

Curriculum phase	What it teaches	Recruiter round it prepares a candidate for
1. Consulting foundations	Guesstimates, case frameworks, profitability, market entry [B07]	The guesstimate and case-interview rounds run by consulting-type recruiters such as Bain, ZS Associates, Deloitte and L.E.K. Consulting, all named on BeyondTech's own results tables [B05, B06]
2. Analytics mastery	SQL at basic, intermediate and advanced levels, plus data cases [B07]	The SQL and data-case rounds run by analytics-type recruiters and the analytics arms of consulting firms, for example BCG GAMMA and McKinsey's analytics centre, both on the fixed 20-firm anchor-recruiter list this project uses [`PLAN.md` 7.3]

Curriculum phase	What it teaches	Recruiter round it prepares a candidate for
3. Product strategy	Product cases, root-cause analysis, KPIs, design [B07]	The product-case rounds run by associate-product-manager and product-analyst recruiters such as Flipkart and Meesho, both on the anchor-recruiter list and named in BeyondTech's own testimonial strip (Meesho, RA05, RA51)
4. Personalised prep	1 on 1 mock interviews, off-campus guidance, off-campus referrals, weekly leaderboard mocks, company-specific previous-year questions [B07, B08]	The final-round fit and HR interviews common to every recruiter type, plus the off-campus application cycle that a campus-only prep course typically ignores

This mapping is drafted directly from the brief's own phase descriptions [B07, B08] and BeyondTech's own named recruiters [B05, B06, RA51]; a fuller cross-reference against Lane C's selection-process research for each of the twenty anchor recruiters is carried in section 5, written separately once that lane's detail is available.

3.3 Proof points: five testimonials, four mentors

A live screenshot of the placement-mastery page's testimonial strip shows five named people with photos and recruiter logos, correcting both the brief's implied count and this project's own first research pass, which had recorded only three [RA51, conflicts.md ruling A-C6].

Name	Role and recruiter	What they say
Ayush Pratap Singh	Business Analyst, Meesho	Calls the sessions practical and structured, credits ongoing support and feedback for his placement [RA05]
Suhani Sharma	Analyst, Bain & Company	Says the structured approach kept her on track while interning, thanks mentors Harsh and Subham by name [RA06]
Ravi (Ravi Shakya)	Business Analyst, OYO	Thanks "Harsh Bhaiya" for concept explanations and mock interviews that helped him identify weaknesses [RA07]
Soumya Raj	ExxonMobil	A fifth testimonial surfaced only on direct screenshot review, not in the original text fetch [RA51]
Vidhi Balyan	ZS	The fifth testimonial's recruiter, ZS, is already on the fixed 20-firm anchor-recruiter list, so no scorecard change follows from this name [RA51, conflicts.md ruling A-C8]

ExxonMobil, named only in Soumya Raj's testimonial, is used in this document purely as additional DTU proof-point colour, strengthening the density of BeyondTech's own traction story on slides 3 or 4. It is explicitly not added to the fixed 20-firm anchor-recruiter list in `PLAN.md` section 7.3, and the college-scorecard's recruiter-overlap criterion (C1) is never recomputed against it, per `conflicts.md` ruling A-C8: reopening a fixed list after Lane C had already completed deep selection-process research against the locked twenty would cascade rework across the whole scorecard for one data point.

Four mentors support the programme, not two as the brief's own narrative text implies: Harsh Agarwal (Founder), Subham Mukhopadhyay (Associate, Bain & Co.), Subrat Sarangi (Business Analyst, Amazon) and Akshit Goel (Product Manager, Google) [RA15, conflicts.md ruling X4]. This is not treated as a correction of the brief so much as an under-report relative to the live site, confirmed by direct fetch; the extra two names, Amazon and Google credentials, give a stronger credibility asset to pitch an unfamiliar new campus than the brief's own two-mentor framing suggests.

3.4 The funnel as it exists today

BeyondTech's funnel today has an open front door and a human-gated back door, a shape that matters directly to the DTU plan in sections 9 and 11. At the top, eight free lead magnets (an Online Assessments Guide, a Bain Analyst Roadmap, a Meesho Business Analyst Roadmap, a Product Analyst Roadmap, a Business Analyst Roadmap, a Data Analyst Roadmap, a Management Consulting Roadmap and a Projects Guide) sit as open Google Drive links with no sign-in or form of any kind [RA21, W08]. A direct check of each link's page content, not merely its HTTP status, confirmed all eight genuinely open to the public, each returning the public-preview signature (a populated `og:title` tag) rather than Drive's access-restricted page [RA24, conflicts.md's confirmation that this is a fully verified finding, not merely plausible]. A free "Course Sampler", the Guesstimate module, is similarly ungated [W07].

Below the open top, admission is gated through four steps: submit an application form, application review, a culture and fit interview that explicitly assesses "readiness to pay the enrollment fee if selected", then final selection and enrolment, with the fee paid only after acceptance [RA17, W06]. No price is shown anywhere on the public site at any stage of this process [RA17]. Past the gated application, the sales motion is a 1 on 1 WhatsApp chat with a prefilled message, rendered here without the live page's own closing punctuation mark per this document's style rule ("Hi, I'm interested in BeyondTech services. Can you help me get started?") [RA25, superseding the differently worded seed capture per `conflicts.md`], alongside a "Request a callback" CTA that this research confirmed sits on the placement-mastery page specifically, not on the contact page as originally assumed [RA20, RA29, conflicts.md ruling A-C2].

The shape this produces is a funnel with a wide, ungated mouth and a narrow, human-staffed throat: anyone can get the company-specific prep material for free, but every single conversion past that point runs through either an interview or a direct chat with the founder's own number, which is exactly the founder-presence bottleneck the brief itself names [B11, B13].

Funnel step	Gated or open today	Evidence
Eight roadmap PDFs	Open, no form, no sign-in	[RA21, RA24]
Guesstimate sampler module	Open, free to watch	[W07]
Application form	Gated, requires a submission	[RA17]
Application review	Gated, human review	[RA17]
Culture and fit interview	Gated, tests "readiness to pay"	[RA17]
Payment and enrolment	Gated, fee paid only after acceptance, no price shown publicly	[RA17]
Post-application contact	1 on 1 WhatsApp chat with the founder's own number	[RA25, RA26]

3.5 Conflicts table X1 to X6 and their rulings

Six conflicts surfaced directly from transcribing the brief, each ruled at Gate G1 per `conflicts.md`.

#	Conflict	Ruling
X1	"40 selections across 14 organisations" [B04] against "50+ so far" [B05]	Use "50+ selections" as the headline figure throughout, since it is the brief's own later, more specific traction statement. The "40 selections across 14 organisations" figure is quoted once, as the brief's own at-a-glance framing, never as a second independent figure alongside the 50+ [conflicts.md]
X2	13 to 14 LPA average, 47 LPA highest at Eternal [B05] against ₹15 LPA average, ₹60 LPA highest on the website [W02]	Use the brief's figures on every DTU-specific slide, since B05 is this season's figure and is case canon; the website's figures are an undated, broader lifetime marketing claim, confirmed by direct fetch [RA12] with no season stated, and are not used anywhere else in this document
X3	11-week bootcamp [B07] against 12 listed weeks and an "8 Month Course / 12 Months" stat line on the site [W02, W03, confirmed RA13, RA14]	Say "11-week bootcamp" everywhere, matching the brief. The site's own internal inconsistency (12 listed weeks, one of which has no new content, against an unmatched "8 Month / 12 Months" stat line) is noted once here as a site-hygiene observation, not used as a second duration number anywhere else
X4	Two mentors named in the brief's narrative against four listed on the live site [RA15]	Use four, confirmed live by direct fetch; this is an under-report relative to the site, not a true conflict
X5	"13 to 14 LPA average, one of the highest" [B05] against DTU's own official campus-wide figures [RB07]	BeyondTech's 13 to 14 LPA figure sits close to, not above, DTU's own official 2023-24 median of ₹13,25,000 [RB07]. This document never claims BeyondTech's average beats the DTU campus average or median; the figure is credible precisely because it tracks the institute's own median rather than inflating it, a trust point, not a differentiation point
X6	"Tier-1" is undefined in the brief	Defined in this document as institutes of national importance and state flagships whose B.Tech median CTC and recruiter list overlap the four core campuses, operationalised by the screen in section 14

---

4. What the three links reveal that the brief does not

Answer. The brief's own three embedded hyperlinks (website, company LinkedIn, founder LinkedIn) [B21] surface seventeen findings the case document itself never states, and together they change the shape of the recommended plan more than any single number in the brief does. The single most consequential pattern across all seventeen is that BeyondTech already has an open, generous top of funnel and a working trust-borrowing mechanism running right now in the form of this very case competition; the job is to repeat both deliberately rather than invent either from scratch.

4.1 W01 to W17, one by one, with the implication for the GTM plan

ID	Finding	Implication for the plan
W01	Site stats: 300+ students mentored, 250+ placed, 20+ companies [RA01]	Gives a lifetime base against which current DTU penetration (section 8) can be sense-checked; it also means the deck's claim of growth is against a real, if small, existing base, not a cold start

ID	Finding	Implication for the plan
W02	Placement-mastery page: average ₹15 LPA, highest ₹60 LPA; "8 Month Course / 12 Months" stat line [RA12, RA13]	Conflicts with the brief's own figures (B05, B07); resolved by conflicts X2 and X3 above, never blended into one sentence
W03	Week-by-week curriculum runs Week 1 to Week 12 [RA14]	Confirms the brief's 11-week figure undercounts by one week of no-new-content graduation project; the plan treats this as a minor site-hygiene note, not a substantive change to the offer
W04	Live class every Saturday 7 to 8 PM, doubt session every Sunday 6 to 7 PM, recorded classes weekly [RA19]	Delivery capacity is one cohort stream; this is directly relevant to the founder-hours model (T11, section 9) and to how many new campuses can realistically be onboarded in one year without hiring
W05	Next batch starts 15 January 2027 [RA18]	Anchors the whole GTM calendar: every DTU activation and every new-campus founding cohort in sections 11, 12, 18 and 21 is sequenced against this date
W06	Admission is gated: application, review, fit interview that tests "readiness to pay", then payment; no price shown [RA17]	The funnel has a human step per applicant, and price opacity is itself a conversion variable (insight I10); both feed the founder-hours model and the funnel-leak analysis in section 9
W07	Free "Course Sampler": the Guesstimate module is free to watch	An existing, already-built lead magnet the DTU plan can route both paid and organic traffic toward before the gated application, at zero new production cost
W08	Resources page: 8 free PDFs served as open Google Drive links [RA21, confirmed genuinely open at RA24]	The strongest single structural insight in this lane (I2): company-specific roadmaps, BeyondTech's actual differentiator, are given away with zero lead capture. The top of the funnel leaks by design, and gating even a fraction of this content behind an email or WhatsApp capture is close to a free improvement
W09	Mentors listed: Harsh Agarwal, Subham Mukhopadhyay (Bain & Co.), Subrat Sarangi (Amazon), Akshit Goel (Google) [RA15]	Four mentors, not two, gives a stronger credibility asset for pitching an unfamiliar new campus than the brief's own narrative implies (conflict X4)
W10	Testimonials, originally recorded as three, corrected to five by direct screenshot [RA51]	A richer proof-point set than first logged; see section 3.3
W11	Contact is a WhatsApp number with a prefilled message; a "Request a callback" CTA	Confirms the sales motion past the gated application is 1 on 1 chat, not a scalable form-to-calendar flow; feeds the founder-hours model directly
W12	Company LinkedIn: approximately 3,000 followers, founded 2022, Delhi, 2 to 10 employees, 14 people associated [RA31, RA32, RA33]	Sizes BeyondTech's owned digital audience, which is the realistic ceiling on free organic reach before any paid spend is needed
W13	LinkedIn post, about one month old: recruiting campus ambassadors from DTU, NSUT, Thapar and BITS Pilani, about 15 reactions [RA35]	An ambassador attempt already exists and pulled weak engagement; also confirms BITS Pilani was already on the founder's own radar before this project's scorecard independently selected it
W14	LinkedIn post, about one week old: Founder's Office intern hiring, about 269 reactions, 26 comments [RA37]	Job-type posts pulled about 18 times the ambassador post's engagement (insight I4, detailed below): students respond to career upside for themselves, not to a brand-service role
W15	LinkedIn post, about one week old: the DCG case competition, prize pool ₹40,000+, about 49 reactions, 19 comments [RA38]	This competition is itself a BeyondTech acquisition play (insight I5, detailed below): a society lends reach and trust, and a prize pool buys a high-intent audience
W16	Founder's Topmate: 312 bookings, 4.9 of 5 from 14 ratings, low-ticket items at ₹49 to ₹50, a free cold-email template, "4M+ impressions", DTU class of 2023 [RA41, RA43, RA44]	A second owned funnel and a working price-ladder precedent (free item, then a ₹10 to ₹50 paid item, then the full cohort) that the new-campus launch plan reuses in section 18
W17	Founder's personal LinkedIn returned HTTP 999 to automated fetch on two separate attempts [RA40]	Marked NOT FETCHED rather than guessed; no browser-automation channel was available in this research pass, so this remains a genuine gap, not a fabricated workaround

4.2 Insight I4: the ambassador post against the intern post

BeyondTech's own LinkedIn history contains a controlled natural experiment in what makes students act. A campus-ambassador recruitment post, naming DTU, NSUT, Thapar and BITS Pilani, drew about 15 reactions and 2 comments [RA35, W13]; a second, separate ambassador post around the same time drew about 9 reactions [RA36]. One week later, a Founder's Office internship post, remote, paid, in growth, strategy and operations, drew about 269 reactions and 26 comments [RA37, W14]. That is roughly eighteen times the reaction count of the stronger ambassador post.

Post type	Age at capture	Reactions	Comments	Tag
Campus ambassador recruitment (post 1)	About 1 month	15	2	[RA35, W13]
Campus ambassador recruitment (post 2)	About 1 month	9	not shown	[RA36]

Post type	Age at capture	Reactions	Comments	Tag
Founder's Office intern hiring	About 1 week	269	26	[RA37, W14]
DCG case competition announcement	About 1 week	49	19	[RA38, W15]

The implication for the launch plan (section 17 to 19) is direct: an ambassador role framed as brand service for BeyondTech underperforms badly against a role framed as a career opportunity for the student, which is exactly why this document's ambassador design in section 19 recruits from inside a paying founding cohort and frames the role around the ambassador's own resume and network value, not around loyalty to the brand.

4.3 Insight I2: the eight ungated lead magnets

BeyondTech's resources page gives away eight company-specific roadmaps (Bain, Meesho, and five others) with no email, no WhatsApp number and no sign-in required [RA21, confirmed genuinely open at RA24]. This is a confirmed finding, not a plausible one: a direct content check of each Drive link's page, not merely its HTTP status, found the public-preview signature on all eight, with no "Request access" wall anywhere [RA24].

Resource	What it covers	Gate status
Online Assessments Guide	Question types, evaluation methods, skills tested for on-campus assessments	Open [RA21, RA22]
Bain Analyst Roadmap	Test formats, case expectations, interview structure	Open [RA21, RA22]
Meesho Business Analyst Roadmap	Online assessment, assignment and interview stages	Open [RA21, RA22]
Product Analyst Roadmap	Skills, tools, analytics fundamentals, product thinking, project ideas	Open [RA21, RA22]
Business Analyst Roadmap	Skills, tools, problem-solving frameworks, real-world projects	Open [RA21, RA22]
Data Analyst Roadmap	SQL, Excel, Python, dashboards, case studies, portfolio projects	Open [RA21, RA22]
Management Consulting Roadmap	Guesstimates, case cracking, problem structuring, communication frameworks	Open [RA21, RA22]
Projects Guide for Non-Tech Profiles	Curated project list for a role-relevant portfolio	Open [RA21, RA22]

The implication is close to a free lever: BeyondTech is already producing the exact content (company-specific, differentiated, free) that a gated lead magnet strategy depends on; it is simply not capturing a single lead from any of it today. Section 11's DTU plan treats a first pass at light-touch gating (email or WhatsApp capture, not a hard paywall) on a subset of these resources as one of its eleven channels [M T3, channel C-ORG-4].

4.4 Insight I5: the DCG competition as the launch mechanism in miniature

The case competition this document is written for is, itself, the clearest working example of the exact mechanism this document recommends for new-campus launches. A society (DCG) lends its own reach and credibility to BeyondTech; a prize pool of ₹40,000 or more buys a high-intent audience of students who would not otherwise engage with an unknown placement-prep brand [RA38, W15]. This single post drew about 49 reactions and 19 comments, more than three times the stronger ambassador post's engagement [RA35, RA38], despite the ambassador post asking for less commitment from a reader. Section 17's "borrow it, seed it, earn it" ladder is not a theoretical construct; it is a description of what BeyondTech is already doing with DCG, generalised into a repeatable, costed playbook for four more campuses.

Step in the mechanism, as DCG already demonstrates it	What BeyondTech contributes	What the society contributes
Borrow	A costed case competition, a question bank and mentor time	Its own name, its own channel reach, its own member base
Seed	A prize pool of ₹40,000 or more [RA38, W15]	A ready, high-intent audience that would not engage with a cold ad
Earn	A results story (selections, named recruiters) generated from this one campus	Local credibility for a second, repeatable activation next season

5. The demand: why non-tech roles matter more to a Tier-1 engineer in 2026

Answer. The non-tech recruiter base that visits Tier-1 engineering campuses runs eight distinct role families, each tested on a recognisable mix of aptitude, SQL, guesstimate, case and fit rounds, and BeyondTech's own four-phase curriculum (consulting foundations, analytics mastery, product strategy, personalized prep, B07) maps cleanly onto that mix. The pull toward these roles is not only pull, it is also push: fresher hiring at the big IT services firms has been cut sharply and repeatedly between 2022 and mid-2026, and branch-wise placement data shows non-circuital branches losing out on seats even at the strongest institutes. One brief-named NSUT recruiter, "Prism", remains unidentified after six total search attempts across two research lanes and is quoted exactly as the brief states it, with no expansion. The clearest single survey anchor for graduate employability is the 2025 India Skills Report (Wheebox), used alone per the ruling that retires its 2024 and 2026 editions as internally inconsistent.

5.1 The non-tech role map

Eight role families recur across the recruiters that visit Tier-1 engineering campuses for non-tech hiring. The table below gives each role's typical recruiters, the closest confirmed CTC band, and the rounds a candidate is actually tested on, all sourced to Lane C's recruiter-by-recruiter research (national in scope, not DTU-specific, per the lane's own instruction).

Role	Typical recruiters (confirmed)	CTC band	What is actually tested	Source
Business analyst	Meesho [RC30, RC31, RC32], OYO [RC33, RC34], Blinkit [RC17], Zomato/Eternal (Autogram portal drive) [RC18, RC19]	Rs 3.5 to 8 lakh, BTech-specific toward the Rs 5 to 8 lakh end [RC01, RC02]	SQL (2 to 7 questions per drive), aptitude MCQs, a guesstimate, a root-cause-analysis case, a behavioural round [RC30 to RC34]	RC01, RC02, RC17 to RC19, RC30 to RC34
Consulting analyst	Bain and Company [RC03 to RC05], BCG [RC53, RC54], McKinsey [RC51, RC52], Kearney [RC49, RC50], Everest Group [RC20 to RC22], L.E.K. Consulting [RC25 to RC27], Accenture Strategy [RC45, RC46]	Not found as a single BTech-entry figure in Lane C's research; the closest adjacent band is the decision analytics associate figure below, used only as a proxy, not as consulting's own confirmed number	A guesstimate round (cost estimation, market size), one to two case rounds (market entry, profitability, location choice), a digital assessment (BCG's Potential Test and Case Simulation, L.E.K.'s pattern-recognition games), and a fit or partner round	RC03 to RC05, RC20 to RC22, RC25 to RC27, RC45, RC46, RC49 to RC54
Decision analytics associate	ZS Associates [RC06, RC07]	Rs 7 to 10 lakh, a Prosple estimate on an expired listing [RC08]	A virtual aptitude plus communication test on the Superset platform (Phase 1), then an on-campus case study and HR interview in groups of seven (Phase 2) [RC06, RC07]	RC06 to RC08
Data analyst	No single named campus recruiter confirmed under this exact title in Lane C's research; the SQL-and-guesstimate round structure under "business analyst" above is the closest process match	Rs 3.5 to 6 lakh nationally [RC55]; by city, Bengaluru Rs 5 to 8 lakh, Mumbai Rs 5 to 7 lakh, Hyderabad Rs 4.5 to 7 lakh, Delhi NCR Rs 4 to 6.5 lakh, Pune Rs 4 to 6 lakh [RC56]	SQL and statistics screens, consistent with the business analyst process above where the titles blur in practice	RC55, RC56
Associate product manager	Flipkart [RC11, RC12], PayU [RC10], upGrad [RC13], general campus APM processes [RC09]	Not found as a confirmed BTech-entry figure in Lane C's research; flagged as a genuine gap, not estimated	Root-cause analysis, design thinking, a product-design question (for example, "design a vehicle renting app for tourists" [RC13]), a guesstimate ("total number of footballs across all BTech colleges in India" [RC11]), and a one-on-one round [RC09, RC11 to RC13]	RC09 to RC13
Operations and strategy analyst	No reliable BTech-specific recruiter or round structure confirmed; the only proxy found is a KPMG Bengaluru "Operation Analyst" listing, a 6-month contractual role restricted to BCom graduates with no PG, which does not match BeyondTech's BTech audience	Rs 3.65 lakh fixed on that one non-matching proxy listing [RC57]; not usable as a BTech band	Not found for a matching role; logged as a gap in Lane C (item 2 of its Gaps section)	RC57
Risk and markets analyst	JP Morgan Chase [RC14 to RC16]	Rs 11 to 13 lakh on a Mumbai risk-management listing, now expired [RC14]	General JPMorgan hiring-stage guide only (Explore, Apply, Interview, Decision; possible HireVue screens, phone interviews, skills tests, a "Superday," technical interviews) [RC16]; no role-title-specific round breakdown confirmed	RC14 to RC16

Two of the eight rows above (consulting analyst's own CTC, associate product manager's CTC, and operations and strategy analyst's round structure) are genuine gaps in the public record, not estimates dressed as facts. Lane C tried three distinct search queries against each and logged them as NOT FOUND (its Gaps items 1 and 2); this document repeats that honesty rather than inventing a number to fill the cell.

5.2 Anchor-recruiter rounds against BeyondTech's four phases

BeyondTech's flagship runs four phases: consulting foundations, analytics mastery, product strategy, and personalized prep [B07]. Each phase has a direct, name-checkable counterpart in the actual round structure of the firms that hire from Tier-1 campuses, which is the mechanism behind the brief's own positioning line, "one course for every non-tech company visiting your campus" [B09].

BeyondTech phase	What it should drill	Anchor-recruiter rounds it maps to	Source
Consulting foundations	Guesstimates, market-entry cases, profitability cases, structured business reasoning	Bain's guesstimate-opening manager round and market-entry case for a luxury water company in Agra [RC04, RC05]; Everest Group's telephonic VP round built on two guesstimates and its location-choice and profitability case rounds [RC21, RC22]; Accenture's aptitude-plus-guesstimate case round (counting schools in Mumbai) [RC45]; Accenture Strategy's manager-and-partner case rounds [RC46]; Kearney's four-case, five-interview structure [RC49, RC50]; McKinsey's Solve assessment and two rounds of case and fit interviews [RC51]; BCG's buddy interviews, two case rounds, and its Potential Test plus Case Simulation [RC53, RC54]; L.E.K.'s mixed fit-and-case first round and written-case final round [RC25, RC26]	RC04, RC05, RC21, RC22, RC25, RC26, RC45, RC46, RC49 to RC54
Analytics mastery	SQL (joins, aggregates, schema design), aptitude, statistics, data-driven guesstimates	Meesho's 7-SQL-question and 4-SQL-plus-24-MCQ online assessments [RC30, RC31] and its guesstimate-plus-SQL-schema second technical round [RC32]; Fractal's 4-SQL-plus-4-coding technical round and its guesstimate-and-probability "Business Understanding Round" [RC38, RC39]; OYO's SQL join-and-aggregate questions paired with a root-cause-analysis case and a guesstimate [RC33]; PwC's 15-SQL-question online test segment [RC23]; American Express's older RDBMS/SQL-heavy MCQ test [RC47]	RC23, RC30 to RC34, RC38, RC39, RC47
Product strategy	Product thinking, root-cause analysis, design thinking, metrics-first guesstimates	Flipkart APM's root-cause-analysis-then-design-thinking-then-one-on-one structure and its guesstimate example [RC11, RC12]; PayU's assignment round covering product thinking, guesstimates and metrics [RC10]; upGrad's product-design question with a metrics focus [RC13]	RC10 to RC13
Personalized prep	Fit, "why this firm," HR, and partner or manager rounds where coaching cannot be generic	ZS's group-of-seven on-campus case plus HR round [RC07]; Everest's partner fit round with case and CV questions [RC22]; Accenture Strategy's "why Accenture, why consulting" discussion [RC46]; BCG's non-evaluative buddy interviews and typical HR questions [RC53]; Zomato/Eternal's business-or-project discussion and hiring-manager round specific to the firm [RC19]; Deloitte USI's combined technical-plus-HR interview [RC35]	RC07, RC19, RC22, RC35, RC46, RC53

Read across the table, the structural logic of BeyondTech's own four phases is not a marketing taxonomy invented after the fact. Each phase corresponds to a round type that a named, confirmed recruiter actually runs, which is the real asset behind the brief's claim that the course covers "every non-tech company visiting your campus" [B09] rather than a generic aptitude or case-prep product.

5.3 "Prism": quoted, not expanded

The case brief names "Prism" as a recruiter at NSUT, alongside Eternal, ZS, Bain and L.E.K. Consulting [B06]. No source, across six total search attempts spanning two lanes, confirms a specific company behind that name. Lane C's own three attempts (logged as RC28, NOT FOUND) searched "Prism recruiter campus placement interview process India analyst," "'Prism' NSUT placement company business analyst," and checked each plausible candidate company (PrismHR, Prism Johnson, Prism Consulting Group Singapore, a Prism hospitality listing in Gurugram) against NSUT's own placement notices, confirming none. A fourth candidate, PrismHR, did turn up a 2022 virtual campus drive for a Delivery Analyst (Fresher) role in Noida, night shift, CTC Rs 4.74 to 5 lakh, open to BTech, MTech, BE, BCA and MCA graduates [RC29], but this is explicitly not confirmed as the brief's Prism and is not treated as such anywhere in this document. Per the ruling on this gap, "Prism" is quoted exactly as the brief states it wherever NSUT's recruiter list is discussed, with no inferred company identity, no expansion, and no role in the scorecard's recruiter-overlap criterion or in any other ranking claim.

5.4 The structural push: a tightening IT fresher market, 2022 to 2026

Non-tech roles are not only an upside students chase. They have become a hedge against a fresher market in Indian IT services that has visibly tightened across the exact years this plan covers.

Year	What happened	Source
Mid-2024	More than 10,000 freshers were still waiting for joining dates across Wipro, Infosys, TCS, Zensar and LTIMindtree, per the IT employee union NITES	RC59
FY24	Infosys's fresher hiring fell to 11,900 graduates from about 50,000 the year before, a 76% drop	RC60
2024	Wipro's CHRO stated the company had not yet honoured campus offers made two years earlier and would complete those before any new fresher hiring, giving no number given the uncertain macro environment	RC61
By September 2025	IT services firms reportedly cut their July to December hiring projections to 1 to 3% from an earlier 3 to 5%; Naukri JobSpeak showed IT services hiring down 4.8% year on year and 3.2% month on month in May 2025	RC62
First nine months of FY26	The top five IT firms together added just 17 net employees, versus 17,764 a year earlier, with most headcount growth coming from acquisitions rather than fresh hiring	RC63
Reported, date unconfirmed	Cognizant reportedly pushed onboarding further out, giving tentative joining dates between February and May 2027 to graduates who had received letters of intent in January or February of the same year, linked in the report to concerns about AI's effect on entry-level hiring	RC64

This trend line is well evidenced for 2022 to mid-2025 and thins out noticeably for 2026 itself; Lane C's own gap note flags that the most recent dated item (RC64) could not even have its publication date confirmed, and three distinct 2026-specific queries returned nothing stronger. The honest reading is that the freeze is well established through 2025 and its 2026 continuation is plausible but thinly evidenced, not that 2026 data confirms an unbroken trend. Either way, a Tier-1 engineer weighing a core software-development-engineer path against a prepared run at a non-tech role is weighing a shrinking door against one that several confirmed recruiters (section 5.1) are still actively opening every season.

5.5 Branch lock-out: who gets left out even inside the IITs and NITs

Branch, not just institute tier, decides how much of the placement season a student actually gets to compete in. A 2025 to 2026 secondary aggregator's IIT branch-wise summary puts Computer Science placement at 95 to 100%, circuital branches (EE, ECE) at 85 to 92%, and Mechanical, Civil and Chemical at 75 to 85%, implying unplaced shares of roughly 0 to 5%, 8 to 15% and 15 to 25% respectively [RC65]. NIT Hamirpur's own 2024-25 figures show the same pattern at one named institute: CSE placed 98.33% (about 1.7% unplaced), ECE 92.73% (about 7.3% unplaced), Mechanical 90.48% (about 9.5% unplaced), against an overall rate of 91.92% [RC66]. A 2024 national report on engineering placements concluded that no institute surveyed reached 100% placement in any single branch, and that Civil, Mechanical and Chemical branches lagged the core computing branches consistently [RC67]. None of these three rows is DTU-specific; they describe the IIT and NIT system generally, and this document does not stretch them into a DTU branch-wise claim that Lane B's own DTU-specific research did not separately confirm.

5.6 What the published surveys say about readiness, not just placement

The Unstop Talent Report 2025, drawing on a base of more than 30,000 Gen Z professionals and 700 HR leaders, found that 83% of engineering graduates and 46% of business school graduates remained without a job or internship offer [RC68], that 60% of students from premier (Tier-1 type) engineering schools specifically had no offer in hand [RC69], that one in four undergraduates took an unpaid internship in 2024, up from one in eight in 2023 [RC70], and that E-Schools and Arts and Science institutions saw 60% and 71% of students respectively receive fewer than 50 company visits, against 86% of B-School students seeing up to 150 company visits [RC71]. Read together, these four figures describe exactly the gap BeyondTech sells into: engineering students, including those at premier institutes, see far fewer company visits and far lower offer rates than the business-school peers they are effectively competing against for the same non-tech roles.

For graduate employability specifically, this document uses only the India Skills Report's 2025 edition (Wheebox and ETS), which reported national employability of 54.81%, based on data from over 6.5 lakh candidates through the Global Employability Test, alongside input from more than 1,000 corporations across 15 industries [RC73]. The 2024 edition ("88 lakh youths") and the 2026 edition (which states "over 100,000" in one summary and "more than 700,000" in another, an internal inconsistency within the same edition) are not cited anywhere in this document, per the ruling that treats the 2025 edition as the one internally consistent, single-sourced claim among the three (C-C3). Separately, India's published test-preparation market-size estimates disagree by roughly 47 times depending on scope, Ken Research's USD 11.6 billion 2025 figure against IMARC Group's USD 244.10 million 2024 figure [RC74, RC75, RC76]; neither figure is cited as a sizing input anywhere in this document, which sizes its own targets bottom-up from named campuses (sections 8 and 14), consistent with the project's deliberate choice not to anchor to a top-down market number.

Survey	Base	Headline figure used in this document	Source
Unstop Talent Report 2025	Over 30,000 Gen Z professionals, 700 HR leaders	83% of engineering graduates without a job or internship offer; 60% of premier-engineering-school students without an offer; one in four undergraduates took an unpaid internship in 2024, against one in eight in 2023	RC68 to RC70

Survey	Base	Headline figure used in this document	Source
Unstop Talent Report 2025, company-visit split	Same base	86% of B-School students saw up to 150 company visits, against 60% of E-School and 71% of Arts and Science students seeing fewer than 50	RC71
India Skills Report, 2025 edition only (Wheebox and ETS)	Over 6.5 lakh candidates, 1,000+ corporations, 15 industries	National employability of 54.81%	RC73 (used alone per ruling C-C3)
India test-preparation market size, context only, never a sizing input	Two national estimates	USD 11.6 billion (2025, Ken Research) against USD 244.10 million (2024, IMARC Group), a roughly 47x disagreement, logged as unresolved	RC74, RC75, RC76

5.7 What this lane genuinely could not find

Three gaps recur across sections 5.1 and 5.2 and are stated here plainly rather than filled with an estimate dressed as a fact.

Gap	What was searched	Result
Consulting analyst's own confirmed BTech-entry CTC band	Role-and-CTC-matched search against Bain, BCG, McKinsey, Kearney and Everest's own campus pages	NOT FOUND as a single confirmed figure; no proxy substituted
Associate product manager's confirmed BTech-entry CTC band	"Associate product manager fresher salary India BTech campus," plus the Flipkart, PayU and upGrad listings already captured	NOT FOUND; round structure is confirmed (section 5.2), pay is not
Operations and strategy analyst's round structure and a matching CTC	"Operations and strategy analyst fresher India CTC campus recruiter," three distinct queries	NOT FOUND; the only proxy found (a KPMG Bengaluru contractual role restricted to BCom graduates) does not match BeyondTech's BTech audience and is flagged as a weak, non-matching proxy, not used as the role's actual band

6. The student: four segments, three buying windows and the months when intent peaks

Answer. BeyondTech is not selling to one undifferentiated DTU student; it is selling to at least four behavioural segments whose urgency peaks in different months of the academic year, which is exactly why a single always-on referral channel under-serves three of the four. An intent heat map built from the limited confirmed DTU calendar evidence, mostly estimated and marked as such, shows a clear second-year window the current engine never reaches and a late-fourth-year spike the engine reaches too late to matter. Public student voice adds honest, if thin, texture: of 37 verified quotes gathered across Quora (Reddit, LinkedIn posts and YouTube comments returned nothing usable), only NSUT (6 quotes) and NIT Surathkal (2 quotes) carry a named campus, and every other quote is framed as general engineering-student sentiment, never as DTU-specific evidence. One named, consenting, dated account from a 180 Degrees Consulting DTU Substack post supplies the DTU-specific colour the anonymous table cannot.

6.1 Four behavioural segments, not four demographic buckets

Segment	What defines them (not age or branch alone)	Job to be done	Trigger that makes them act
The branch-locked third year	A non-circuital-branch student (section 5.5's evidence that Mechanical, Civil and Chemical branches see materially fewer, later company visits than CSE and ECE) who realises their own branch's recruiter list is thinner than their circuital-branch classmates'	"Give me a credible shot at the recruiters who do visit, even though my branch isn't their first stop"	Seeing a circuital-branch friend's offer land, or a placement-cell notice that excludes their branch's eligibility
The late-starting fourth year	Has not begun structured prep as placement season opens (around August on the commonly cited, estimated calendar, see 6.2)	"Compress months of guesstimate, case and SQL practice into the few weeks before my first on-campus interview"	The first visiting-company notice landing on the placement-cell board or WhatsApp group
The early-planning second year	Ambitious, often influenced by a senior's result, wants a head start years before placement season	"Build the muscle now, at a lower price, before the fourth-year rush bids up a mentor's or senior's time"	A senior's LinkedIn post about an offer, or exposure to a society event in first or second year

Segment	What defines them (not age or branch alone)	Job to be done	Trigger that makes them act
The off-campus re-applicant	Did not convert during the on-campus cycle, or is targeting a company that never visits their campus at all	"Replicate the structure and company-specific prep that an on-campus drive would have given me, entirely on my own"	The on-campus placement season closing, or a public Quora/Reddit thread confirming "off-campus is harder" (see 6.4, theme T8)

Each segment has a different urgency clock and a different price sensitivity: the second year has the most time and the least cash-in-hand urgency, the fourth year has the least time and the most urgency, and the off-campus re-applicant has already absorbed the cost of a missed cycle and is the hardest to reach through an on-campus channel by definition.

6.2 An intent heat map, mostly estimated and marked as such

DTU's own official calendar for internship season, placement season, exam windows, and society fest dates for Oct 2026 to Sep 2027 was not found despite three distinct search attempts in Lane B (the lead's own note on this gap: "DTU's official T&P Cell structure, internship/placement calendar for Oct 2026 to Sep 2027... remain unconfirmed"). What exists is one dated anecdote, ECE department mid-term exams scheduled 21 to 26 September 2026 [RB44, est. as a general calendar anchor, not a placement-season date], student-review descriptions (undated, not official) that internship hiring begins around the last week of July with most major companies finished by August [RB45], and the commonly cited, estimated 1 August placement-season start carried from this project's own planning assumptions. Engifest, DTU's flagship cultural festival, typically runs in February and has run since 1974 [RB30, RB31], giving one more fixed calendar anchor even though it is cultural rather than placement-related. The heat map below is built from these few confirmed anchors plus reasonable inference about exam windows and semester breaks; every cell is an estimate, not a measured figure.

Month	Second year	Third year	Fourth year	Off-campus re-applicant
October to December	Low, est.	Medium, rising toward internship-season awareness, est.	High, mid-placement-season, est.	Medium, picks up once on-campus offers are known, est.
January to March	Medium, Engifest-season visibility of senior results, est. [anchored to RB30, RB31]	High, internship-drive preparation window opening, est.	Medium, tapering as most offers land, est.	High, a common "I was not selected, what now" search window on the evidence in 6.4's theme T8 quotes, est.
April to June	Low, exam and summer window, est.	Medium, pre-internship final preparation, est.	Low, largely resolved, est.	Medium, est.
July to September	Low, est.	High, internship season opens around the "last week of July" [RB45, est.] and runs into placement-season anxiety by September	High, final placement push around the commonly cited 1 August season start [est.] and the confirmed late-September exam window [RB44]	High, the segment most likely to be actively searching once the on-campus cycle has visibly started without them, est.

The honest reading of this table is less about any single cell and more about its shape: BeyondTech's referral-driven engine is strongest exactly where fourth-year intent is already highest (July to December), and weakest exactly where second-year intent is building (January to June), which is the gap sections 9 and 11 return to as a structural, not incidental, channel problem.

6.3 Three buying windows, one engine currently reaches well

Window	What is actually happening on campus	Who is in it	How well BeyondTech's current referral engine reaches it
Internship season	Companies begin intern hiring around the last week of July, with most major recruiters finished by August [RB45, est.]	Mostly third years	Reached moderately; this is when word-of-mouth from placed seniors is loudest
Placement season	Opens around the commonly cited, estimated 1 August start and runs through the academic year	Mostly fourth years	Reached well; this is the segment the brief's own "50+ so far" traction (B05) was built in
Off-campus cycle	Runs year-round, picks up visibly once the on-campus cycle has closed for a given student	Fourth years who were not selected on campus, plus students from campuses BeyondTech has never worked with	Reached poorly; a 1:1 WhatsApp sales motion [W11] and a gated fit interview [W06] do not scale to students who never heard of BeyondTech through a placed senior in the first place

6.4 Student voice by theme, counted honestly

Lane I searched Reddit, Quora, LinkedIn posts and YouTube comment sections for first-person, platform-native student accounts of non-tech placement preparation. Reddit, LinkedIn and YouTube comments returned nothing usable: Reddit's search index did not surface an actual indexed thread for any of eight tried query combinations, LinkedIn surfaced only institutional placement-cell announcements rather than individual students' own accounts, and YouTube's search tool returned video titles and channel pages, never actual comment text with a visible author and date. Every one of the 37 verified rows that survived therefore comes from Quora, re-read through a text-extraction proxy where the direct fetch failed, and is marked "VERIFIED (search result only)" rather than a plain "VERIFIED," since a proxy-read page is not the same as a directly rendered one.

Platform scoped	Queries tried	Usable rows produced	Why
Quora	Multiple topic-specific queries across guesstimates, branch lock-out, off-campus difficulty and paid-course reviews	37 of 37	Direct fetch returned HTTP 403; a text-extraction proxy successfully pulled quotable text, so every usable row is marked "VERIFIED (search result only)," never plain "VERIFIED"
Reddit	8 combinations across r/Btechtards, r/developersIndia, r/Indian_Academia, r/BITSPilani, r/EngineeringStudents	0	No indexed thread surfaced; only third-party mirror sites returned, which then blocked direct fetch with HTTP 403
LinkedIn posts	Queries combining "non tech placement," "case prep," "guesstimate" with named campuses	0	Only institutional placement-cell accounts surfaced, out of scope for individual student voice
YouTube comments	Queries combining guesstimate and case-interview video topics with "no idea" and "started late" phrasing	0	Search tool returned video titles and channel pages only, never visible comment text with an author and date

Theme	Count (of 37)	What it captures
T1, no structure	1	Practising a skill without any guidance is hard (shares a quote with T8)
T2, started late	1	Resume and prep work left until companies are already visiting
T3, branch lock-out	3	Whether non-circuital branches get IT or analyst-adjacent roles at all
T4, cost or trust of paid courses	14	Mixed, genuinely split sentiment on Internshala's paid placement-guarantee courses, some calling it a scam, others saying it recovered its fee within six weeks
T5, seniors as the main source	5	How much a student leans on seniors for placement guidance, and whether that reliance is necessary
T6, society as the main source	0	No usable first-person row found; every search surfaced only clubs' own casebooks and marketing pages, never a student crediting a society in their own words
T7, company-specific question hunting	5	Where to find real guesstimate and case examples for a named firm (ZS Associates specifically)
T8, off-campus difficulty	9 (one shared with T1)	Whether off-campus placement is harder than on-campus, and what to do when ineligible for every company on campus

Of these 37 quotes, only two campuses are named in the source text itself: NSUT, with 6 quotes, all concerning seniors as an information source and resume timing [VI01 to VI06], and NIT Surathkal, with 2 quotes, both on whether non-circuital-branch students get IT-adjacent roles [VI19, VI20]. DTU itself produced zero quotes under this lane's platform rules. The remaining 29 quotes carry no stated campus. Per the ruling on this finding, this document never implies broader or more even student-voice coverage than the lane actually produced: where a DTU-specific claim is needed, this document and the deck draw on BeyondTech's own named, consenting DTU testimonials (Lane A) rather than this lane's anonymous quotes, and where Lane I's quotes are used at all, they are framed explicitly as general engineering-student sentiment gathered from Quora, not as DTU-specific or longlist-college-specific findings, since the lane's own coverage does not support that narrower claim.

A representative sample, verbatim and attributed exactly as the source file states:

Quote	Platform, date	Theme
"What should I do to get placed at McKinsey at NSIT (now NSUT)? I am a complete noob and have negligible interaction with seniors who get placed at big 4."	Quora, 10 Sep 2025, NSUT	T5
"There is zero percent doubt that off-campus is much more difficult when compared to on-campus hirings."	Quora, approx. 2023, campus not stated	T8
"YES, IT companies do offer roles and various positions with them to non circuit branches"	Quora, approx. 2016, campus not stated	T3

Quote	Platform, date	Theme
"I personally know more than 50 people from M.Tech & B.Tech from core branches"	Quora, approx. 2022, NIT Surathkal	T3
"rather than prep for case studies do prep for guesstimates"	Quora, approx. 2018, campus not stated	T7
"At first I thought the placement guarantee course will not give guarantee and 30000 rs was a lot... once I did the course and got an internship 30000 was recovered in one and a half month only."	Quora, approx. 2024, campus not stated	T4

6.5 The one named DTU voice this document can actually attribute

Separately from Lane I's anonymous table, a named, consenting, published interview exists: a DTU alumnus, now a Bain analyst, spoke to 180 Degrees Consulting DTU for a Substack post dated 6 Jun 2025, describing starting non-tech placement preparation late and leaning heavily on a senior to catch up. This source falls outside Lane I's four scoped platforms (it is a club's own newsletter, and the subject is named and consenting rather than an anonymous platform poster), so it was correctly excluded from the quote table above. Per the ruling on this finding, it is used here, separately, by name and date, as the strongest single piece of DTU-specific student-experience colour this document has, precisely because it is named and consenting rather than anonymous, a stronger evidence class than the Quora table, not a weaker one.

6.6 What this means for the DTU plan

The four segments and three windows argue against treating "the DTU student" as one audience reached at one moment. The branch-locked third year and the early-planning second year are both effectively invisible to a referral engine that fires loudest in July to December around fourth-year placement urgency (section 6.2). The off-campus re-applicant is structurally unreachable by a 1:1 WhatsApp motion that depends on already knowing someone who knows BeyondTech. This is the evidentiary basis for section 11's channel plan deliberately front-loading second-year and non-circuital-branch capture rather than simply running more of the same referral mechanism harder.

---

7. Competition: who else sells structure, at what price and with what promise

Answer. Twenty-nine competitors and substitutes were catalogued across seven categories, direct non-tech placement prep, consulting prep, product prep, analytics and SQL prep, mentor marketplaces, free content, and on-campus substitutes, and BeyondTech's closest direct rival, CrackNonTech, cannot be priced at all on its live site today, so this document never cites a CrackNonTech or NextLeap price, only their confirmed duration, guarantee framing and scale claims. A claims audit against the 2024 CCPA coaching-advertisement guidelines and ASCI's 2023 education-sector clauses shows BeyondTech's own practice (consented, post-selection, named testimonials, no "100%" or "guaranteed" language) already sits on the cautious side of rules that at least one direct competitor's "100% Placement Guarantee or Full Refund" claim tests more aggressively. A strategy canvas built on the Eliminate, Reduce, Raise, Create logic argues BeyondTech should eliminate opaque pricing and blanket guarantees, reduce single-skill dependency, raise consented named proof, and create the one thing no competitor in this set does, recruiter-specific prep tied to the actual company roster visiting a given campus. Free substitutes, YouTube channels and club casebooks chief among them, win on cost and lose on exactly that specificity.

7.1 The competitive field, by category

Direct non-tech placement prep and consulting prep

Competitor	Offer	Confirmed duration	Confirmed guarantee or claim framing	Scale claim	Source
CrackNonTech	Non-tech placement fellowship: an 8-week/60-day Flagship Fellowship and a 21-day Accelerated Sprint, both with 16 live sessions, plus a free 15-minute 1:1 mentorship call	8 weeks (Flagship) or 21 days (Sprint) [RD01]	"100% Placement Guarantee or Full Refund," conditional on attendance, assignment, mock and application criteria; support duration is internally inconsistent on the site itself, "18 Months Placement Support" against an FAQ saying "up to one year" [RD03, RD04, RD05, RD11]	1,500+ students placed in non-tech roles; 50,000+ community members and aspirants; 4.7 of 5.0 average rating; 50+ non-tech companies plus 500+ more organizations; 300+ internships added weekly; 500+ full-time opportunities [RD06 to RD10]	RD01 to RD14

Competitor	Offer	Confirmed duration	Confirmed guarantee or claim framing	Scale claim	Source
Case Interviews Cracked (book)	A 297-page book of 32 solved consulting case interviews by two named authors	Not applicable, a book	No guarantee claim found	Cited as a reference by an SRCC student group alongside IIM-A casebooks	RD22
180 Degrees Consulting and IIM club free casebooks	Free annual consulting casebooks published by individual campus 180DC chapters and IIM consulting clubs	Annual edition	No guarantee claim; resale explicitly barred by the issuing chapter's own copyright notice	Campus-specific reach only, not engineering-campus specific and not aimed at non-tech-role aspirants from Tier-1 BTech colleges specifically	RD23 to RD28
CaseCoach	Self-study case interview video curriculum with ex-MBB instructors; 1:1 coaching sold separately	Ongoing platform access	No guarantee claim found	About 70 video lessons, per a rival site's description, not CaseCoach's own page	RD33
PrepLounge	Case interview prep platform: practice cases, video tutorials, peer mock interviews, paid coaching add-ons	Ongoing membership, not a fixed course length	No guarantee claim found	200+ practice cases, 30 video tutorials, 220 case exercises; 495,000+ to 551,000+ registered members across different capture dates	RD29 to RD32
Management Consulted	Consulting case interview course and 1:1 coaching, plus separate one-off live workshops	Ongoing, plus 2-hour live sessions	Self-claimed 80% of its paid "Black Belt" cohort lands at least one offer, against a self-cited industry-wide rate below 3%, a company claim, not independently verified	No independent member count found	RD34 to RD36

Product and analytics prep

Competitor	Offer	Confirmed duration	Confirmed guarantee or claim framing	Scale claim	Source
NextLeap (Product Management Fellowship)	Product Management Fellowship; acquired the previously separate "PM School" brand in February 2025	Reported as 16 weeks on one aggregator page and 12 weeks on another page of the same aggregator, neither matching NextLeap's own site, which states no duration at all	No placement-guarantee language found on NextLeap's own pages; career support is gated to students scoring above 70% on the final project	Company-wide claim of over 15,000 learners moved into technology careers since 2021	RD15 to RD19
The Product Folks	Cohort-based product-skills training: a paid, capacity-capped 6-week cohort and a free 4-week certificate cohort	6 weeks (paid) or 4 weeks (free)	No guarantee claim found	No independent scale figure found	RD38, RD39
Scaler (Data Analytics / Scaler Academy)	Data science and analytics bootcamp track	Not found	No guarantee claim found	No independent scale figure found	RD40
Newton School (Data Science and AI)	Online programme with unlimited mock interviews and 10,000+ coding questions	14 months	"100% Placement Assistance (Lifetime)"	10,000+ coding questions, unlimited mock interviews, company claims	RD42
Coding Ninjas (Data Analytics track)	Data analytics career-camp and job-bootcamp track with live projects, 1:1 mentorship and mock interviews	6 to 9 months	No guarantee claim found	Self-reported 95% placement rate, unverified	RD43
Internshala Trainings (placement guarantee courses)	Six placement-guarantee courses within 80+ trainings on the platform, two offering guaranteed jobs, the rest assured internships	Not found	"Career ki Guarantee" brand positioning; one unverified, third-party Scribd upload separately claims a 100% refund if not hired plus a Rs 30,000 stipend, not found on Internshala's own page	No independent scale figure found	RD45, RD46

Mentor marketplaces, free content and on-campus substitutes

Competitor	Offer	Confirmed duration	Confirmed guarantee or claim framing	Scale claim	Source
Topmate	Marketplace for 1:1 mentor sessions, mock interviews and resume reviews; each expert sets their own price	Per-session	No guarantee claim; the platform takes a 10% commission via an expert's own link or 20% via its marketplace listing	No independent scale figure found	RD50
Preplaced	One-on-one, long-term mentor-led coaching until the candidate reaches their stated goal	Ongoing, open-ended	No guarantee claim found	No independent scale figure found	RD51
LearnWidGiggs (YouTube)	Free channel on scenario-based interview questions, guesstimates and mock interviews, run by a named creator	Free, ongoing	No guarantee claim; free content	About 60,000 subscribers, a low-confidence figure per the lane's own gap note	RD53
PrepInsta Prime (YouTube)	Free, general Indian placement-prep channel covering named IT recruiters, not guesstimate or SQL specific	Free, ongoing	No guarantee claim; free content	521,000 subscribers as of a June 2025 capture	RD54
On-campus T&P cell substitutes (three named colleges)	Institutional mock interviews, aptitude tests and personality-development sessions, sometimes co-run with a student technical society	Free, in-person, per institution's own calendar	No guarantee claim; institutional service	Open to all undergraduate and postgraduate students at the named institution	RD55 to RD57

Twenty-nine rows in total sit behind the three tables above, matching `research/data/competitors.csv` in full. Two rows, "Product Space" and "HelloPM," returned nothing after three distinct search attempts each and are logged in the dataset as not found rather than silently dropped.

7.2 Price-ladder context: what is confirmed, and what is never cited

CrackNonTech's exact fee, Rs 8,999 struck from Rs 35,000, was a seed figure that could not be reconfirmed anywhere. The live site shows a dynamic countdown ("Price up in...") and a "No payment required to start" sign-up box with no fee visible at all [RD02]. NextLeap's PM Fellowship EMI, about Rs 1,322 a month, was a second seed figure that also could not be reconfirmed; NextLeap's own pages show no price or EMI at all, and the only proxy is a non-PM-specific aggregator figure of about Rs 27,499 [RD16, RD21]. Per the rulings on both (D-C1 and D-C3), neither price is cited anywhere in this document or should be cited anywhere in the deck. Every other element of both seed facts, duration, guarantee framing and scale claims, is independently reconfirmed on the live sites and is used freely above.

Where a price is confirmed, even in a different currency or only on a third-party page, this document can use it with its source attached: PrepLounge's Premium-plus-coaching package at USD 199 a year, discounted from USD 249 [RD29]; Management Consulted's core course at USD 195 [RD34]; a one-off live workshop at USD 69 [RD36]; a third-party, non-Scaler-affiliated listing reporting Scaler's full programme at approximately Rs 3,49,000 and its Data Science programme at approximately Rs 2,99,000, dated March 2026 [RD40]; Newton School's EMI starting at Rs 7,950 a month over 14 months [RD42]; StrataScratch's own pricing page, USD 32 a month, USD 139 a year, or USD 289 lifetime [RD49]; a benchmark one-hour mock-interview price of Rs 2,950 from a company other than Topmate, Preplaced or Unstop, used only to calibrate a typical market rate for that kind of session [RD52]. BeyondTech's own program fee is not published anywhere the research found, which the model treats as an assumption with three price points (A01, bear Rs 8,000, base Rs 12,000, bull Rs 18,000) rather than a confirmed figure, bracketed by this price-ladder context rather than by CrackNonTech's or NextLeap's now-unconfirmable numbers.

Confirmed or never cited	Figure	Source
CrackNonTech fee	Never cited anywhere in this document or the deck; live site shows a countdown, no fee	RD02, ruling D-C1
NextLeap PM Fellowship EMI	Never cited anywhere in this document or the deck; own pages show no price	RD16, RD21, ruling D-C3
PrepLounge Premium plus coaching	USD 199 a year, discounted from USD 249	RD29
Management Consulted core course	USD 195, plus a USD 69 one-off live workshop	RD34, RD36
Scaler full programme, third-party listing	Approximately Rs 3,49,000 (Data Science track approximately Rs 2,99,000), dated March 2026	RD40
Newton School Data Science and AI	EMI from Rs 7,950 a month over 14 months	RD42

Confirmed or never cited	Figure	Source
StrataScratch	USD 32 a month, USD 139 a year, or USD 289 lifetime	RD49
Benchmark one-hour mock interview, a company other than Topmate, Preplaced or Unstop	Rs 2,950 including taxes, used only to calibrate a typical market rate	RD52
BeyondTech's own fee	Not published anywhere; held as assumption A01 (bear Rs 8,000, base Rs 12,000, bull Rs 18,000), never a confirmed figure	A01

One naming correction matters for any competitor count or logo wall: "PM School," listed in the research plan as if it were a standalone fifth product-prep competitor alongside NextLeap, was acquired by NextLeap in February 2025 [RD20] and is not an independent, currently operating competitor. Per the ruling on this (D-C5), PM School and NextLeap are treated as one competitor, not two, in every count and comparison in this document; where PM School is mentioned at all, it is described as "now part of NextLeap (acquired February 2025)."

7.3 Claims audit against the 2024 coaching-advertisement guidelines

The Central Consumer Protection Authority's "Guidelines for Prevention of Misleading Advertisement in Coaching Sector, 2024" took effect 13 Nov 2024 [RH01]. Every clause below is sourced to a law-firm or news secondary summary, not the primary notified text, which could not be fetched as readable content from any official source tried [RH01 to RH12]; this document states each finding as "reported by" a named secondary source rather than as settled legal fact, consistent with the ruling that treats this as a conservative working guide, not a legal opinion.

#	Area	Claim BeyondTech can make	Claim BeyondTech cannot make or must qualify	Basis
1	Guaranteed outcomes	State that it does not and should not advertise a "guaranteed selection," "guaranteed job," "100% placement" or "assured rank/marks" claim, consistent with the direction of both the CCPA 2024 guidelines and ASCI's education-sector Clauses 3 and 4	Cannot assert as settled law that such a claim would be found in violation, since the primary CCPA and ASCI text was not read directly	RH08, RH09, RH23, RH24
2	Testimonials and named outcomes	State that any named outcome used in an ad should carry that student's written consent given after the result, not at enrolment, matching the direction both regulators point in	Cannot state a single, confirmed universal rule number, since both sources are secondary paraphrase	RH13, RH14
3	Scope, does this even apply to BeyondTech	Can say BeyondTech's status as a "coaching centre" under the 2024 guidelines is plausible given the broad, secondary-sourced definition of "coaching" as academic support, instruction and tuition, and that treating itself as covered is the conservative, defensible posture	Cannot claim a confirmed finding that a college-level, non-tech-placement bootcamp for BTech students is explicitly in scope, as opposed to school or competitive-exam coaching; searched three times, not found	RH03, RH04, RH06, RH07
4	Ambassador or influencer disclosure	Can recommend that any paid, stipended, free-seat or commission-linked student ambassador post about BeyondTech carries an upfront "Ad" or "Partnership" label, not a bio-only disclosure	Cannot claim this is a settled, BeyondTech-specific legal requirement rather than an application of a general ASCI self-regulatory guideline	RH26 to RH35
5	Student data collection	Can recommend affirmative, itemised consent notices, age-gating for under-18 contacts, and a stated retention and deletion rule tied to purpose, as good DPDP-aligned practice	Cannot claim BeyondTech or a campus event organiser qualifies for the DPDP "educational institution" exemption from parental consent; sources disagree on how far that exemption reaches even for schools themselves	RH36 to RH41
6	WhatsApp outreach	Can recommend keeping an explicit, business-named opt-in record and using pre-approved templates for any proactive or bulk message, switching to free-form replies only inside the 24-hour window after a reply	Cannot state with confidence whether an opt-in must literally name "WhatsApp" to be valid, since two tiers of secondary sources disagree	RH51 to RH56
7	Campus commercial activity	Can note that AICTE's own posture, MoUs with Monster India, apna.co and others, shows the regulator treats outside placement-support partners as something to formalise, not categorically bar	Cannot cite any DTU-specific, AICTE-specific or UGC-specific rule governing a private firm's campus-ambassador programme or a society co-branded case competition; searched three ways, not found	RH57 to RH59

Against this table, CrackNonTech's unqualified "100% Placement Guarantee or Full Refund" claim [RD03] sits closer to the line this audit describes than BeyondTech's own current practice does; BeyondTech's testimonials (five named, consented students, A-C6) already follow the consent-after-selection direction row 2 describes, without this document asserting that CrackNonTech's claim has been found unlawful by any named enforcement action.

7.4 Strategy canvas: Eliminate, Reduce, Raise, Create

Move	What it means for BeyondTech	Why, against the field above
Eliminate	Any unqualified "100%" or "guaranteed" placement language; any opaque, countdown-gated pricing page	CrackNonTech's own guarantee claim and price-hidden-behind-a-countdown pattern [RD03, RD02] is exactly what the claims audit (7.3) flags as the riskier posture; BeyondTech's price opacity (its own site shows no price anywhere, W06) is a separate, self-inflicted version of the same problem, worth fixing on its own terms (see section 9)
Reduce	Single-skill dependency: being "the SQL company" or "the case-prep company" the way DataLemur, StrataScratch, CaseCoach and PrepLounge each are	A student preparing for Meesho's SQL-and-guesstimate combined round (RC32) or Fractal's SQL-plus-guesstimate round (RC38, RC39) needs both skills in one place, which none of the single-skill platforms in the dataset offer together
Raise	Named, dated, consented testimonials, already five strong (A-C6: Ayush Pratap Singh at Meesho, Suhani Sharma at Bain and Company, Ravi at OYO, Soumya Raj at ExxonMobil, Vidhi Balyan at ZS)	Almost none of the 29 competitors in the dataset show a named, consented, post-selection testimonial; most either show no outcome evidence at all or a self-reported, unverified aggregate rate (Coding Ninjas' "95% placement rate, unverified" [RD43], Management Consulted's self-cited "80%... versus industry-wide below 3%" [RD35])
Create	Recruiter-specific, campus-visiting-company-specific prep tied to the actual roster of firms visiting a given campus, which is the mechanism behind "one course for every non-tech company visiting your campus" [B09]	No competitor in the 29-row dataset organises its curriculum around a named campus's actual visiting-recruiter list; every one is organised by skill (SQL, cases) or by role family (product, consulting) instead, which is the gap sections 5.2 and 11 build the product and channel argument on

7.5 Where free substitutes win, and where they do not

Free content wins on cost and loses on specificity. 180 Degrees Consulting and IIM club casebooks are free and genuinely useful for consulting-style cases, but every chapter's own copyright notice bars resale, none is aimed at non-tech-role aspirants from Tier-1 BTech colleges specifically, and the content is not matched to any particular campus's visiting-recruiter roster [RD23 to RD28]. LearnWidGiggs, a free YouTube channel on scenario-based interview questions and guesstimates, has roughly 60,000 subscribers on a low-confidence figure [RD53]; PrepInsta Prime, a much larger free channel at 521,000 subscribers, covers general IT placement preparation (named recruiters like TCS, Infosys and AMCAT) rather than the guesstimate-and-SQL mix non-tech roles actually test [RD54]. On-campus T&P cell sessions are free and institutionally backed but generic: open to all students regardless of which companies are actually visiting that student's branch, and run on the institution's own calendar rather than a structured, phase-based curriculum [RD55 to RD57]. None of these free substitutes offers what section 7.4's "Create" move argues BeyondTech alone can: a curriculum organised around the specific recruiters a specific campus's students will actually face.

8. DTU in numbers: 2,608 students a year and a non-tech pool of about 1,956

Answer. DTU admits 2,608 B.Tech students a year [M T1, derived from RB01's sanctioned intake of 2,529 plus a modelled growth margin], and the model treats between 1,304 and 2,608 of the three upper years as a serviceable, non-tech-open pool depending on scenario, with 1,956 as the base case [M T1]. BeyondTech's 110 current DTU enrolments sit at about 5.6% of that base-case pool, inside a 5.37% to 6.14% range across bear, base and bull [M T2]. DTU's own placement data is strong and well documented at the university level (2,412 graduated, 1,759 placed, median ₹13,25,000 for the 2023-24 cohort, per the institute's own NIRF submission) [RB07], but a branch-level breakdown of who is actually open to a non-tech role was not found anywhere in this research, which is the single biggest evidentiary gap in this section. The three-year placement run, the recruiter list and the DTU calendar are reported below exactly as the lane found them, including what is simply not knowable from outside the institute.

8.1 Intake: a university-wide number, no confirmed branch split

DTU's B.Tech sanctioned intake has been flat at 2,529 seats a year across the four admission years 2020-21 through 2023-24 [RB01]. The model's working cohort figure of 2,608 a year [M T1] applies a small modelled growth margin on top of RB01's confirmed 2,529, since the 2023-24 figure is two admission cycles old by the time BeyondTech would be selling into the 2026-27 season; this margin is the model's own adjustment, not an additional source, and the doc flags it as such rather than presenting 2,608 as a second independently sourced figure.

What was searched for and not found: a circuital versus non-circuital branch split of that intake (circuital meaning CSE, IT, Software Engineering, Mechatronics and Computer Engineering, Electrical and Electronics; non-circuital meaning Mechanical, Civil, Environmental, Biotechnology, Production and Industrial, Electronics and Power, Chemical and the rest) for the 2023 to 2026 admission years, split by main campus and east campus [RB gap 1]. Three distinct query families were run against DTU's own site, the NIRF submission PDF and JAC Delhi counselling bulletins; the NIRF submission itself turns out to carry only a university-wide UG/PG total, never a branch matrix, and no admission brochure or counselling bulletin was reachable in this research session [RB gap 1]. This means the doc cannot state, with a source, what share of each year's 2,529 seats sits in a circuital branch. Every branch-level statement

elsewhere in this section rests on placement-season output data (who actually placed, by branch), not on intake data (who was admitted, by branch), and the two are not interchangeable: a branch could have a small intake but a high placement rate, or vice versa, and this research cannot distinguish the two possibilities. The only university-wide population figures confirmed are total UG strength across all years and programmes, 10,431 students (8,979 male, 1,452 female), and total PG strength, 507 students (404 male, 103 female), both as submitted for NIRF 2025 [RB03, RB04].

8.2 Three years of placement data: the official triplet and the aggregator detail, never blended

Per the ruling in conflicts.md (B-C1), DTU's placement data comes from two sources that answer different questions and are never blended into one sentence. The institute's own NIRF 2025 data submission gives the graduated, placed and median-salary triplet, cohort by cohort:

Cohort (graduating year)	Graduated	Placed	Placement rate	Median salary
2021-22	2,131	1,880	about 88%	₹13,00,000 [RB05]
2022-23	2,220	1,965	about 89%	₹14,10,000 [RB06]
2023-24	2,412	1,759	about 73%	₹13,25,000 [RB07]

This is official, tier-3 data, explicitly dated to each named cohort [RB05, RB06, RB07]. It shows the 2023-24 cohort's placement rate dropping noticeably from the two prior years (89% to 73%), a real signal that is worth more to a judge than any single-year headline, and one the aggregator-reported figures below cannot see because they describe a different season.

Average package, highest package, branch-wise detail and total company count are not carried in the NIRF submission at all; for these, the doc cites Getmyuni, labelled explicitly as aggregator-reported for the 2025 placement season: registered 2,487 (B.Tech 1,958; M.Tech 250; MBA 279), placed 1,766 to 1,831 depending on which figure is read off the same page (the page's own course-wise rows sum to 1,766 against a stated headline of 1,831), placement rate 60.8% overall, B.Tech-specific rate 75.9%, average package ₹15.75 LPA overall (B.Tech average ₹18.46 LPA), 360 offers above ₹20 LPA, 350-plus companies visiting, and a highest package of ₹85 LPA domestic (B.Tech Software Engineering, offered by Atlassian; a separate ₹1.8 crore international offer went to a Software Engineering graduate from Palantir London) [RB13, RB14, RB15]. A five-year trend from the same aggregator shows average package moving from ₹12.24 LPA (2020) to ₹12.21 LPA (2021) to ₹15.16 LPA (2022) to ₹12.61 LPA (2023) to ₹16.71 LPA (2024) to ₹15.75 LPA (2025), with the highest package spiking to ₹180 LPA in 2022 (recruiter unnamed) before settling near ₹85 LPA in 2024 and 2025 [RB16].

Branch-wise, the aggregator's 2025 figures show a consistent circuital-versus-non-circuital gap on both average and highest package:

Branch	Average package	Highest package	Branch group
Software Engineering	₹18.46 LPA	₹85 LPA	Circuital
Computer Engineering	₹19.85 LPA	₹64 LPA	Circuital
IT	₹16.62 LPA	₹56 LPA	Circuital
ECE	₹15.82 LPA	₹48 LPA	Circuital
Electrical	₹12.89 LPA	₹45 LPA	Non-circuital
Biotechnology	₹11.00 LPA	₹31 LPA	Non-circuital
Mechanical	₹9.58 LPA	₹31 LPA	Non-circuital
Civil	₹9.20 LPA	₹20.31 LPA	Non-circuital

[RB17, aggregator-reported]. Every circuital branch sits above every non-circuital branch on both measures, with no overlap in this table. This branch gap, confirmed at the placement-outcome level even without a confirmed intake-level split (section 8.1), is the evidentiary backbone for insight I1 in section 9 below.

Internship data for 2025 shows 202 offers from 49 companies, a highest stipend of ₹1.87 lakh a month, 45 offers above ₹1 lakh a month, and an average stipend band of ₹50,000 to ₹80,000 a month [RB19]. This matters for the DTU calendar (section 8.4): internship hiring and placement-season hiring are two separate buying windows for BeyondTech, not one.

Where BeyondTech's own results fit against this backdrop: the brief states an average package of 13 to 14 LPA (described as "one of the highest") and a highest of ₹47 LPA at Eternal for its own placed students this season [B05]. Per the X5/B-C1 joint ruling in conflicts.md, this figure is never claimed to beat DTU's own average or median; it sits close to, not above, the institute's own 2023-24 median of ₹13,25,000 [RB07], which the doc treats as a trust point (BeyondTech's self-reported average tracks the institute's own real median rather than inflating past it) rather than a differentiation claim. The brief's separate highest-package figure of ₹47 LPA at Eternal [B05] is used only when discussing BeyondTech's own placed students specifically, never as a claim about DTU's campus-wide highest package, which per the B-C2 ruling is a different statistic entirely (₹85 LPA, Atlassian, aggregator-reported) [RB15].

8.3 The non-tech recruiter table: three partial lists, never presented as one

No single source lists 25-plus DTU recruiters with role, CTC, eligible branch, CGPA cut-off, visit month and offer count per firm; this detail table, specified in the plan as a research target, was not found after dedicated search [RB gap 2]. What exists instead is recruiter names, split across three aggregators that disagree with each other on who actually visits, plus the brief's own two named lists. Per the B-C3 ruling, these are never merged into a single eight-or-more-firm "confirmed" set; each name is attributed to the specific source that names it.

Recruiter	Named by	Category
Bain and Company	Getmyuni (RB18); also brief B05	Consulting
Deloitte	Getmyuni (RB18); also CollegeSearch.in (RB27)	Consulting
Accenture	Getmyuni (RB18)	Consulting/tech
JP Morgan Chase	Getmyuni (RB18); also CollegeSearch.in (RB27); also brief B05	Finance
Samsung, SanDisk, Texas Instruments, Uber	Careers360 (RB20)	Tech/core
Bank of America, Deutsche Bank	Careers360 (RB20)	Finance
Hindustan Unilever, Fractal, SmartCube	Careers360 (RB20)	FMCG/analytics
Visa, PwC, Bajaj, Google	Careers360 FAQ addendum (RB20)	Mixed
Goldman Sachs, Boston Consulting Group, McKinsey	CollegeSearch.in (RB27), "BFSI and Consulting" category	Finance/consulting
Google, Microsoft, Adobe, Atlassian, Amazon, Flipkart, Salesforce, Apple	Getmyuni (RB18)	Tech/product

Careers360's own page explicitly states that it does not name BCG, McKinsey, Bain or Deloitte anywhere on its DTU placement page [RB21], which is itself useful evidence: it confirms that no single aggregator's list is complete, and that the 8-firm composite the lead's seed fact F03 had assembled before verification does not independently reconcile to any one fetched page [B-C3]. Eternal, ZS Associates, Everest Group, PwC and L.E.K. Consulting (all named in the brief itself, B05 and B06) were not independently found on any DTU-specific recruiter list fetched in this research; only Bain, Deloitte and JP Morgan Chase are confirmed outside the brief by at least one aggregator [RB gap 2]. This does not mean the brief's firms do not visit DTU; it means no external source besides the brief itself confirms them doing so. Prism, the recruiter the brief names at NSUT (B06), could not be identified as a specific company after six total search attempts across two research lanes, and per ruling C-C1 it is quoted exactly as the brief states it, with no expansion and no role in the DTU recruiter table above, since it was never claimed as a DTU recruiter in the first place.

8.4 The DTU calendar: what is confirmed, what is estimated

The DTU calendar that drives both the criterion-C6 scoring in section 14 and the channel sequencing in section 11 rests on a mix of confirmed and estimated dates, and the doc states the difference plainly rather than letting one number borrow the other's confidence.

Calendar item	Status	Detail
Internship hiring window	Est.	Student reviews (non-official, undated) describe internship recruiting beginning around the last week of July, with most major companies finished hiring by August [RB45]
Placement season start	Est.	Commonly cited elsewhere as 1 August; not independently reconfirmed for the 2026-27 season in this research [conflicts.md, gaps carried forward]
ECE department mid-term exams	Est.	A third-party exam-notice aggregator reports 21 to 26 September 2026 [RB44]; this is one department's exam window, not a university-wide calendar
Engifest	Est. (pattern only)	DTU's annual three-day cultural festival, run since 1974, historically held in February (2023 edition ran 17 to 19 February); no confirmed 2026-27 date was found [RB30, RB31]
Invictus	NOT FOUND	Three distinct search queries returned no DTU-connected event under this name; do not assume it exists at DTU
Yuvaan	NOT FOUND	Three distinct search queries returned nothing connected to DTU under this name
DCG case competition with BeyondTech	Confirmed	Already running, per the brief's own hyperlink evidence (W15); this is the one calendar anchor in this table that needs no "est." flag
15 January 2027 batch start	Confirmed	BeyondTech's own site states this directly [W05, RA18]

The honest reading of this table is that the DTU-specific academic and fest calendar for Oct 2026 to Sep 2027 could not be confirmed from outside the institute within this research's time budget [RB gaps 4, 5]. Section 11's month-by-month plan uses the one dated anecdote found (the ECE mid-term window) plus the commonly cited 1 August placement-season start, both marked "est.", rather than a confirmed official calendar; neither the T&P cell's structure, student coordinators nor any rule on outside training partners was found either [RB gap 3].

8.5 T1 in full: the DTU addressable funnel

Scenario	Per-year cohort	TAM (years 2-4)	SAM	SOM	Non-tech share
Bear	2,608	7,823	1,304	120	20%
Base	2,608	7,823	1,956	220	30%
Bull	2,608	7,823	2,608	392	40%

[M T1]. TAM is every B.Tech student across years 2 to 4 (7,823, roughly three cohorts of 2,608); SAM applies the non-tech-open share (A03) to years 3 and 4 in full and to year 2 at half weight, on the reasoning that second years are less settled on a track than third and fourth years; SOM is SAM multiplied by a target penetration figure for the coming season. The non-tech-open share itself (20% bear, 30% base, 40% bull A03) is an assumption, not a measured figure, because no public data source states how many DTU students specifically consider a non-tech role; branch-level placement outcomes (section 8.2) are used as the directional evidence that a meaningful non-circuital share exists, but the exact percentage is modelled, not counted. Both SAM and SOM are always reported as a bear-to-bull range in this document, never as a lone point estimate, consistent with the three-scenario discipline in the writer brief.

8.6 T2 in full: penetration today, never a point estimate

Scenario	Enrolments today	SAM	Penetration	Referral share	Implied selection rate	Implied selections	50+ reachable
Bear	80	1,304	6.14%	90%	35%	28	False
Base	110	1,956	5.62%	80%	45%	50	True
Bull	140	2,608	5.37%	70%	60%	84	True

[M T2]. Current penetration of the serviceable pool sits in a 5.37% to 6.14% range, with 5.62% as the base-case figure [M T2]; note that penetration falls slightly from bear to bull even as the enrolment count rises, because the denominator (SAM) grows faster than the numerator across scenarios, a pattern the model surfaces honestly rather than smoothing over. Current enrolments of 80 to 140 (base 110) A04 are an assumption derived by dividing the brief's "50+ selections" figure (B05) by an assumed 35% to 60% selection rate (A29); the model checks this assumption against its own output, and confirms that only the base and bull scenarios reach a "50+ selections reachable" result (implied selections of 50 and 84 respectively), while the bear scenario implies only 28 selections, short of the brief's own stated floor [M T2]. Current channel mix is dominated by referral: about 80% of enrolments arrive this way in the base case, ranging from 70% in bull (where other channels have scaled) to 90% in bear (where referral is nearly the only channel working) A05. This single number, that four out of five of today's enrolments arrive through word of mouth rather than any owned or paid channel, is the empirical anchor for the entire funnel-leaks argument in section 9.

---

9. Where the DTU engine leaks: five breaks between a student who has heard of BeyondTech and one who enrols

Answer. Recall of BeyondTech at DTU is genuinely strong (B11), so the problem is never awareness; it is five distinct breaks between hearing about the programme and paying for it, each with its own mechanism, and each avoidable without spending on ads. Three of the five have a hard number behind them (founder-hours load, an open-link funnel with no capture, and a near-zero second-year share); two are structural claims that this research can describe but cannot size from outside the company, and the doc says so rather than inventing a figure. Together they explain why 80% of today's enrolments still arrive through one channel (referral, A05) eight years into the product's life, and why organic-first, earlier-entry fixes outperform a paid-awareness campaign for this specific funnel.

9.1 The issue tree (MECE)

```
Student has heard of BeyondTech, has not enrolled
├── 1. Referral reaches the wrong students
│     Only circuital-branch fourth years sit inside the word-of-mouth chain (I1)
```

```
├── 2. The top of the funnel has no net
│     8 free PDFs and the course sampler are open links with no capture (I2, W07, W08)
├── 3. The sales motion is one person, one chat, every time
│     1:1 WhatsApp is the only contact channel; it does not scale with demand (W11)
├── 4. The admission gate adds friction and founder time
│     Application, review, fit interview, then payment; no price shown anywhere (W06)
└── 5. There is no mechanism built for second or third years at all
      Today's acquisition skews almost entirely to students already close to placement season (A28 baseline)
```

These five exhaust the funnel from first contact to payment (MECE: every stage between "has heard of" and "has paid" is covered exactly once) and each is evidenced below.

#	Leak	Mechanism	Number or finding
1	Referral reaches the wrong students	Word of mouth travels through placed seniors, concentrating in circuital branches	Not measurable from outside: branch-wise intake split not found [RB gap 1]; branch-wise placement gap confirmed (section 8.2)
2	Top of the funnel has no net	8 PDFs and the sampler are open, ungated links	8 of 8 links confirmed genuinely open [RA21, W08]; A26 models a 20% to 50% capture rate if gated (base 35%)
3	Sales motion is 1:1 and does not scale	WhatsApp chat, one phone number, founder as sole operator	220 founder-hours a year at 110 enrolments today (2.0 hours each, A22) [M T11]
4	Admission gate adds friction and founder time	Application, review, fit interview, payment; no price shown	Not measurable from outside: no applicant-level drop-off data exists; hypothesis I10 only
5	No second- or third-year capture mechanism	Acquisition concentrates on students already near a placement decision	Second-year share at baseline: 0.0% [M T13]; target after the plan: 20% (A28 base)

9.2 Leak 1: referral reaches circuital-branch fourth years and skips the rest

Branch-wise placement outcomes confirm a real circuital-versus-non-circuital gap at DTU: Computer Engineering, Software Engineering, IT and ECE all post average packages from ₹15.82 to ₹19.85 LPA against ₹9.20 to ₹12.89 LPA for Civil, Mechanical and Electrical [RB17, RB22, RB23]. A referral chain that runs through placed seniors naturally concentrates inside the branches where seniors are being placed into non-tech roles most visibly and most often discussed, which the placement data suggests skews circuital. This is the one leak where this research cannot supply a confirmed percentage: DTU's branch-wise intake split was not found [RB gap 1], so the exact share of BeyondTech's current base that is circuital versus non-circuital is not measurable from outside the company; what is measurable is the referral-share figure itself (80% of enrolments today, A05) and the branch-level placement gap that referral would plausibly inherit. The doc states this as a well-evidenced mechanism with an unconfirmed exact share, not as a precise statistic.

9.3 Leak 2: ungated lead magnets lose the lead at the top, now confirmed genuinely open

BeyondTech's resources page carries exactly 8 free PDFs (Online Assessments Guide, Bain Analyst Roadmap, Meesho Business Analyst Roadmap, Product Analyst Roadmap, Business Analyst Roadmap, Data Analyst Roadmap, Management Consulting Roadmap, and a Projects Guide for Non-Tech Profiles), each served as an open Google Drive link [RA21, confirming W08]. A direct check of each link's page content, not just its HTTP status, found a populated public-preview meta tag on all 8 with no "request access" wall, confirming genuinely open access, not merely unconfirmed access [conflicts.md, "Confirmed, no action needed"]. The Guesstimate module of the course sampler is free to watch with the same no-capture pattern [W07]. Every one of these touchpoints is a moment where a visitor who is interested enough to click a PDF link leaves no trace: no email, no WhatsApp number, no name. Assumption A26 models what a gating change would recover, a 20% to 50% capture rate on this traffic (bear to bull, base 35%) A26, but this assumption is flagged explicitly in the assumptions register as low confidence, since no comparable bootcamp-specific or India-specific benchmark survives verification [conflicts.md, F-C5]. Monthly organic visitor volume to the resources page (A27, 300 to 1,200 a month, base 600) carries the same low-confidence flag A27, conflicts.md F-C5. These two numbers size the opportunity honestly as a range with an explicit confidence caveat, not as a precise forecast.

Assumption	Bear	Base	Bull	Confidence
A26, gated-content capture rate after the fix	20%	35%	50%	Low; no comparable bootcamp-specific or India-specific benchmark found [conflicts.md F-C5]
A27, monthly organic visitors to the resources page	300	600	1,200	Low; same flag [conflicts.md F-C5]

9.4 Leak 3: the 1:1 WhatsApp sales motion does not scale

Every contact path on BeyondTech's own site resolves to the same mechanism: a WhatsApp chat with a prefilled message ("Hi, I'm interested in BeyondTech services. Can you help me get started?") routed to a single phone number [RA25, confirming W11]. The

"Request a callback" CTA, which a corrected reading places on the placement-mastery page rather than the contact page (A-C2), leads to the same personal channel. This is a sales motion with exactly one operator: the founder himself. The model's founder-hours figures make the scaling limit explicit: at today's volume, each enrolment costs 2.0 founder-hours on average (bear 3.0, bull 1.5) A22, for a total of 220 founder-hours a year at 110 enrolments [M T11]. Every additional enrolment through this same motion, with no change to the process, adds hours linearly; the model's 24-hour net saving after the plan (section 9.6 below) comes specifically from replacing part of this 1:1 load with group formats, not from the motion scaling on its own.

9.5 Leak 4: the gated fit-interview application adds friction and founder time

Admission runs through four steps: submit an application, application review, a "culture and fit" interview that explicitly tests "readiness to pay the enrollment fee if selected," and only then payment and enrolment, with no price shown anywhere on the site [RA17, confirming W06]. Two separate costs sit inside this single leak. First, a human-judged step (the fit interview) sits between every interested student and every enrolled one, which is a founder-hours cost by construction, the same cost quantified in section 9.4. Second, price opacity combined with a gate that explicitly screens for "readiness to pay" may be suppressing applications from students who assume the programme costs more than it does, or who are unwilling to commit time to an interview before knowing the number; this is stated in the plan as insight I10, a hypothesis with no primary data behind it, never as a confirmed finding, because this research is desk-only and no applicant survey exists to test it.

9.6 Leak 5: no second- or third-year capture mechanism exists at all

The model's KPI-target table shows a second-year share of DTU acquisitions at 0.0% at baseline [M T13], and assumption A28 sets a post-plan target of 20% second-year share in the base case (10% bear, 30% bull) A28. A target this far above a measured zero implies, rather than directly proves, that today's acquisition is concentrated in third and fourth years close to a placement decision; no society workshop, mock drive or structured outreach aimed specifically at second years exists in any touchpoint this research found on BeyondTech's own site or its public channels. This is the structural mirror of leak 1: referral both skips non-circuital branches and skips earlier years, for the same underlying reason (word of mouth travels fastest among peers who are already deep in the same placement conversation).

9.7 Founder hours: the cost of running the funnel as it stands, and what the plan changes

Metric	Hours a year
Today (110 enrolments x 2.0 hours each, A22 base)	220
After the plan, DTU alone (target enrolments x 0.8 hours each, A23 base)	132
Added by the four new campuses combined	64
After the plan, total across 5 campuses	196
Hours freed at DTU specifically	88
Founder's annual capacity (A31, 20 hours a week base x 52)	1,040

[M T11]. The plan reduces total founder hours by 24 a year (220 to 196) despite expanding from one campus to five, because the hours-per-enrolment rate at DTU falls from 2.0 to 0.8 (A22 to A23), driven by replacing part of the 1:1 WhatsApp-and-interview motion with group information sessions, alumni-run interviews and a published price band A23 basis. At 196 hours against a 1,040-hour annual capacity, the plan fits comfortably inside one founder's available time even before counting any delegation [M T11, "fits in founder's week": True]. This is the single clearest answer this research can give to playbook rule P11 (state the founder's time cost, never overpromise it away).

Scenario	Hours per enrolment today (A22)	Hours per enrolment after the plan (A23)
Bear	3.0	1.2
Base	2.0	0.8
Bull	1.5	0.5

A22, A23. The hours-per-enrolment rate falls in every scenario, not only the base case, which is why the founder-hours saving in section 12.6 holds across the bear-to-bull range, not as a base-case artefact alone. The bear scenario, where each enrolment costs 3.0 founder-hours today against 1.2 hours after the plan, is the scenario with the largest proportional saving (60%), precisely because the bear case is also the scenario where the fit interview and the WhatsApp back-and-forth take longest per student, since a less-converting funnel means more unresolved conversations sitting in the founder's queue at any one time. This is a second, independent reading of why leak 3 and leak 4 compound each other: a slower-converting top of funnel does not just produce fewer enrolments, it

produces more founder-hours spent per enrolment that does land, which is exactly the relationship the model's A22 bear/base/bull bracket (3.0/2.0/1.5) encodes.

10. The DTU society map: 16 societies, their reach and what each is good for

Answer. DTU's society map gives BeyondTech at least four genuinely usable partners for a borrow-trust-first launch move (DTU Consulting Group, 180 Degrees Consulting DTU, E-Cell DTU and TEDxDTU), each with a confirmed activity record, but the research fell short of its own 30-row target for `societies.csv`, filling 16 of 30 rows, and this document reports that shortfall honestly rather than padding it with invented names. No DTU-specific precedent of an external brand tying up with a DTU society was found anywhere except the BeyondTech x DCG competition itself, which is the subject of this research, not a comparable case to learn from. The partner shortlist below works with the six best-evidenced rows rather than stretching thin data across all sixteen.

10.1 societies.csv in full

Society	Type	What it does	Flagship events	Instagram followers	Past external partners	Confidence
DTU Consulting Group (DCG)	Consulting	Student consulting society; its own self-description is that "consulting is a hobby that is yet to firmly set foot in DTU," and DCG exists to build that culture and develop business sense among students [RB41]	Case competition co-hosted with BeyondTech, 2026, prize pool ₹40,000-plus [W15]	NOT FOUND	BeyondTech (this case competition, 2026)	L
180 Degrees Consulting DTU	Consulting	Pro-bono consulting branch of the global 180DC network; delivers live consulting projects to NGOs, social enterprises and startups; has published three editions of its own DTU CaseBook [RB37]	DTU CaseBook (3 editions); international client projects (12-plus of 20-plus total) [RB37]	1,981 [RB34]	Airth (Shark Tank India Season 4, ₹96 lakh funding); Namakwali (Shark Tank India Season 3, ₹75 lakh funding); Planet Protector Packaging (Best Consulting Project Award, due-diligence category) [RB37, RB38]	H
Enactus DTU	Social-consulting	NOT FOUND	NOT FOUND	NOT FOUND	NOT FOUND	L
E-Cell DTU (Entrepreneurship Cell)	Entrepreneurship	Entrepreneurship cell running startup-facing events and recruitment drives	Elevate, annual flagship event; Elevate 2026 dated 8 September 2026 per the account's own bio [RB33]	14,600 [RB33]	NOT FOUND	H
Round Table DTU	Social-consulting	NOT FOUND	NOT FOUND	NOT FOUND	NOT FOUND	L
Kalakriti DTU	Cultural	NOT FOUND	NOT FOUND	NOT FOUND	NOT FOUND	L
AIMS-DTU	Finance	NOT FOUND (name suggests an investment or analytics-management society; no DTU-specific description confirmed)	NOT FOUND	NOT FOUND	NOT FOUND	L
Society of Robotics DTU (SRDTU)	Tech	Builds robotic applications for societal problems such as security and event automation; developed an Arduino-based product, S-RDUINO, with a patent application filed [RB39]	Robotics workshops, including one guided by IIT Bombay faculty; a winter training programme [RB39]	NOT FOUND	NOT FOUND	M
Semicon DTU	Tech	NOT FOUND	NOT FOUND	NOT FOUND	NOT FOUND	L

Society	Type	What it does	Flagship events	Instagram followers	Past external partners	Confidence
EMCEE DTU	Media	NOT FOUND	NOT FOUND	NOT FOUND	NOT FOUND	L
IEEE DTU (Student Branch)	Tech	One of the oldest IEEE student branches in the IEEE Delhi Section, with 35-plus years of history [RB40]	TECHWEEK; VIHAAN; IEEE XTREME; TROIKA, the annual technical festival [RB40]	NOT FOUND	NOT FOUND	M
ACM DTU	Tech	NOT FOUND	NOT FOUND	NOT FOUND	NOT FOUND	L
Deb Soc DTU (Debating Society)	Cultural	NOT FOUND	NOT FOUND	NOT FOUND	NOT FOUND	L
TEDxDTU	Media	Independently organised TEDx event; self-described as the largest university-organised TEDx event in India; recruits an organising team by application [RB35]	Annual TEDx event (editions dated 17 March 2025 and 23 March 2026 per a ted.com event-listing snippet)	2,083 [RB35]	NOT FOUND	H
DTU Times	Media	Official student newspaper and media platform of DTU; founded January 2009 by Anand Meena and Abhishek Bindal, both 2K11-batch alumni, per a third-party aggregator, not the outlet's own page [RB46]	NOT FOUND	19,000 [RB36]	NOT FOUND	H
ASSETS DTU (Finance and Investment Society)	Finance	Finance and investment society of DTU; the name is an acronym for Accounting Skills and Stock Exchange Training Society; aims to build an investing culture among students [RB42]	NOT FOUND	NOT FOUND	NOT FOUND	L

[RB33 to RB42, `research/data/societies.csv`]. The eight rows marked NOT FOUND beyond a bare name (Enactus, Round Table, Kalakriti, AIMS, Semicon, EMCEE, ACM, Deb Soc) had at least three distinct search queries each run against them and returned no verifiable DTU-specific account, follower count or activity description [RB gap 6]. Product, analytics and data-science clubs, and most individual department societies, did not surface a confirmable account either, which is the concentration of the shortfall against the 30-row target [RB gap 11]. The gap is logged, not papered over: per conflicts.md's own instruction, the lead reserves one more targeted pass (ideally with Instagram-native search, not available in this research session) before the final society-partner slide is built, since that slide needs six well-evidenced rows, not thirty thin ones [conflicts.md, "gaps carried forward"].

A row-count summary against the plan's own 30-row target makes the shortfall explicit by category:

Category	Target per PLAN.md 6.3	Rows with any confirmed detail	Rows bare-name only
Consulting and social-consulting	4 named (DCG, 180DC, Enactus, Round Table)	2 (DCG, 180DC)	2 (Enactus, Round Table)
Entrepreneurship	1 named (E-Cell)	1 (E-Cell)	0
Tech	4 named (SRDTU, IEEE, ACM, Semicon)	2 (SRDTU, IEEE)	2 (ACM, Semicon)
Media and cultural	4 named (EMCEE, TEDxDTU, DTU Times, Deb Soc)	2 (TEDxDTU, DTU Times)	2 (EMCEE, Deb Soc)
Finance	1 named (AIMS, folded with ASSETS as the confirmed finance row)	1 (ASSETS)	1 (AIMS)
Product, analytics, data science, department societies	14 rows targeted by the 30-row goal	0	Not reached: no confirmable account surfaced in general web search [RB gap 11]

[research/data/societies.csv, RB gap 6, RB gap 11]. Ten of the sixteen rows carry at least one confirmed data point; six are bare names with nothing else confirmed. The product, analytics, data-science and most department-level societies are the entire unmet remainder of the 30-row target, not a scattering across every category.

10.2 Reach-by-relevance grid

This grid places each society with a confirmed data point on two axes: reach (combined Instagram and LinkedIn followers, where known) and relevance (how directly the society's own activity maps to BeyondTech's non-tech placement thesis: consulting and analytics societies score highest, pure cultural or tech societies lowest).

Society	Reach band	Relevance band	Why
DTU Times	High (19,000 followers)	Low to medium	Largest reach of any confirmed society account, but a media outlet, not a non-tech career society; useful for distribution of a story, not for co-hosting a workshop
E-Cell DTU	High (14,600 followers)	Medium	Entrepreneurship-adjacent, not consulting or analytics specifically, but the largest audience among the career-adjacent societies
180 Degrees Consulting DTU	Low (1,981 followers)	High	Small account but the single most relevant partner: a live consulting society with its own published casebook and a direct line to the exact student segment BeyondTech sells to
TEDxDTU	Low (2,083 followers)	Medium	Recruits an organising team and runs a flagship annual event; relevant as a high-visibility co-branding moment, not a recurring workshop partner
DTU Consulting Group	Unknown (NOT FOUND)	High	Already BeyondTech's own partner on this exact competition; relevance is confirmed by the existing relationship even though reach could not be independently verified
IEEE DTU, Society of Robotics DTU, ASSETS DTU	Unknown (NOT FOUND)	Low to medium	Confirmed activity descriptions but no follower data; IEEE and Robotics skew technical, ASSETS skews finance-adjacent and is the closest of the three to BeyondTech's thesis

The honest reading of this grid is that DTU's single largest confirmed audience (DTU Times, 19,000 followers) is the least thematically relevant, while the most relevant partner for the actual workshop-and-casebook mechanic (180 Degrees Consulting DTU) has the smallest confirmed reach of the four well-evidenced societies. This is exactly the trade the launch plan in section 11 has to make: borrow 180DC's trust and relevance first, then use E-Cell's or DTU Times' larger reach to amplify the result, rather than picking one society and expecting it to deliver both.

10.3 Partner shortlist

Society	What it lends	The activation	Month	Expected registrations
DTU Consulting Group	An existing, live relationship and a consulting-specific audience already engaged by the current case competition	A second, BeyondTech-branded case workshop immediately following the DCG competition's own prize announcement, while interest is highest	Dec 2026 (est., following the current competition's close)	150 (A06 base, event-registrant benchmark)
180 Degrees Consulting DTU	A published casebook and a pro-bono consulting track record students already respect; the most relevant confirmed society for this thesis	Co-branded mini-casebook session, BeyondTech supplying company-specific question content, 180DC supplying the room and the audience	Feb 2027 (est., ahead of the March internship cycle)	150 (A06 base)
E-Cell DTU	The largest confirmed reach among career-adjacent societies (14,600 followers), useful for amplifying a result once one exists	A joint Instagram post and story series carrying a founding-cohort testimonial after the first workshop lands, timed to Elevate's own September pull	Sep 2027 (tied to Elevate 2026's confirmed 8 September date as the comparable annual anchor)	Not sized; an amplification activation, not a lead-generation one
TEDxDTU	A high-visibility, once-a-year stage and an organising team that is itself drawn from ambitious students	A short BeyondTech-branded segment or booth at the annual TEDx event, positioned as career inspiration rather than a sales pitch	Mar 2027 (matching the confirmed 23 March 2026 prior-edition date)	250 (A06 bull, given TEDx's larger one-off audience)
Placement cell	Institutional credibility and a captive final-year audience already thinking about non-tech options	A placement-cell-hosted information session, the lowest-reach but highest-intent channel in the plan (C-ORG-7, T3)	Jan 2027 (ahead of the 15 Jan batch start, W05)	200 (A10 base, mock-drive-equivalent benchmark)
ASSETS DTU	A finance-and-investing-literate audience adjacent to, though not identical to, BeyondTech's consulting and analytics thesis	A joint "numbers behind the offer" session pairing BeyondTech's case-prep content with ASSETS' own investing-literacy framing	Apr 2027 (est., placed after the core launch window to avoid competing with higher-priority activations)	80 (A06 bear, smaller and untested relationship)

This table follows the objective-partner-rationale device used across the deck's diagram grammar [PLAN.md 14.3, G13]: each row names what the society specifically lends (not a generic "awareness"), the activation format, a month tied to a confirmed or clearly flagged estimated date, and an expected registration count drawn from the model's own event-registrant assumption (A06) rather than an invented figure.

10.4 Past brand tie-up examples: none found DTU-specific

Eight DTU-specific examples of an external brand partnering with a DTU society, each with a format and a public registration count, were targeted by this research and zero were found after dedicated search [RB gap 8]. The only confirmed example of an external brand running an activation with a DTU society is the BeyondTech x DTU Consulting Group case competition itself [W15], and this document treats it as exactly what it is: the subject of this research, not a precedent to learn a pattern from. This gap is real and the doc does not paper over it with a national-level substitute dressed up as DTU-specific; where a comparable mechanism is needed, section 17 draws on Lane G's national precedents (case competitions as acquisition channels generally, campus ambassador programmes, and named third-party quotes on trust-before-paid-acquisition), explicitly scoped as general precedent, not DTU evidence.

Research target	Result	What stands in its place
8 DTU-specific brand-tie-up examples with format and registration count	0 found after dedicated search [RB gap 8]	The BeyondTech x DCG competition itself, cited as the research subject, not a precedent
National-level case-competition-as-acquisition precedents (Lane G item 3)	Multiple found (HUL LIME, EY's recurring case challenges)	Used in section 17, explicitly scoped as national, not DTU-specific, evidence
National-level campus ambassador precedents (Lane G item 1)	Multiple found (Coding Ninjas, Internshala ISP, GeeksforGeeks Campus Mantri)	Used in sections 17 and 19, same explicit national scoping

11. The DTU plan: eleven channels in three layers, sequenced to the campus calendar

Answer. The DTU plan is eleven channels organised into three layers: capture (fixing the leaks from section 9 before spending a rupee on reach), organic distribution (seven channels, all society-, department- or referral-driven) and paid amplification (four channels, of which only two earn a funded rupee in the base case). Society co-hosted workshops, department representatives and the mock placement drive do the heavy lifting on enrolments per rupee; the two funded paid channels exist specifically to retarget people who have already touched something organic, not to buy cold awareness. The month-by-month calendar below sequences all eleven against the one confirmed hard date on BeyondTech's own calendar, the 15 January 2027 batch start, and the two estimated DTU-calendar anchors from section 8.4.

11.1 Layer 1: capture, fixed before any channel spends a rupee

The funnel leaks identified in section 9 are structural, not channel-specific; fixing them multiplies the return on every channel below rather than competing with any one of them for budget.

Fix	What it addresses	Mechanism	Cost treatment
Gate the library	Leak 2: 8 open PDFs with no capture (RA21, W08)	A short form (name, year, branch, WhatsApp number) ahead of each Drive link; the sampler gated the same way	Zero cash cost; a one-time site change. Feeds channel C-ORG-4 below, whose modelled CAC of ₹126 (the cheapest channel in the whole plan, M T3) assumes exactly this gate is in place
Publish a price band on the site	Leak 4: price opacity paired with a "readiness to pay" fit-interview screen (RA17, W06)	Replace "no price shown anywhere" with an indicative band (for example, "₹8,000 to ₹18,000 depending on cohort and founding-campus discount," matching A01's own bear-to-bull bracket); this does not fix the fit-interview step itself, only the information asymmetry around it	Zero cash cost
Group information sessions	Leaks 3 and 4 together: the 1:1 WhatsApp motion and the founder-hours cost of the fit interview	Replace a share of individual WhatsApp conversations and one-on-one fit interviews with a scheduled group session (placement-cell information session, C-ORG-7) and alumni-run interview panels, which is exactly the mechanism behind the 0.8 founder-hours-per-enrolment figure after the plan (A23) against today's 2.0 (A22)	Already costed inside C-ORG-7 (₹8,000, M T3)

These three fixes are the precondition for every number in the channel table below; the model's organic-channel CAC figures already assume the gated library is in place (C-ORG-4's ₹126 CAC specifically depends on A26's capture-rate assumption, section 9.3).

11.2 Layer 2: organic distribution, the seven channels that do most of the work

Channel	What it is	Reach	Enrolments	Cash cost	Founder hours	CAC
C-ORG-1	Society co-hosted case workshops	300	8.1	₹16,000	12	₹1,975
C-ORG-2	Department and branch representatives	480	10.4	₹8,000	16	₹772
C-ORG-3	Mock placement drive	400	10.8	₹16,000	16	₹1,481
C-ORG-4	Gated resource library and sampler	1,200	15.9	₹2,000	13.2	₹126
C-ORG-5	Structured referral with reward	330	9.6	₹19,246	2.9	₹2,000
C-ORG-6	Alumni story series on LinkedIn	5,400	5.8	₹5,000	12	₹857
C-ORG-7	Placement cell information session	200	3.2	₹8,000	6	₹2,469

[M T3, base scenario, pre-funding]. C-ORG-4, the gated resource library, is the cheapest channel in the entire eleven-channel plan at ₹126 per enrolment, cheaper than every other organic channel and an order of magnitude cheaper than any paid channel; this is the single clearest argument for fixing leak 2 before spending on reach elsewhere. C-ORG-2, department and branch representatives, is the second-cheapest at ₹772 and is also the channel most directly aimed at leak 1 (referral skipping non-circuital branches), since a representative in each department reaches students a circuital-branch referral chain would never touch. Each channel's creative idea:

- **C-ORG-1, society co-hosted case workshops.** A 90-minute "crack the guesstimate" session run jointly with DTU Consulting Group or 180 Degrees Consulting DTU (section 10.3), using one real company-specific question from BeyondTech's own question bank as the hook, with founding-cohort testimonials shown at the close.
- **C-ORG-2, department and branch representatives.** One paid or incentivised student representative per non-circuital department (Mechanical, Civil, Electrical, Biotechnology), tasked specifically with carrying the message past the circuital-branch referral chain that leak 1 describes, each given a short script and the gated resource library link as a lead magnet.
- **C-ORG-3, mock placement drive.** A full mock interview day, structured like a real recruiter's rounds (aptitude, guesstimate, case, SQL where relevant) and run against BeyondTech's own question bank, with participants scored and the top performers offered a founding-cohort discount on the spot.
- **C-ORG-4, gated resource library and sampler.** The existing 8 PDFs and the Guesstimate sampler, now behind a short capture form, promoted through every other channel below as the lead magnet rather than left as a silent page on the site.
- **C-ORG-5, structured referral with reward.** A named referral programme (replacing today's informal word of mouth) with a ₹1,000 base-case reward split between the giver and the joiner (A16), explicitly designed to formalise, not replace, the 80% of today's volume that already arrives this way (A05).
- **C-ORG-6, alumni story series on LinkedIn.** A weekly post featuring one of the five confirmed testimonials (Ayush Pratap Singh at Meesho, Suhani Sharma at Bain, Ravi at OYO, Soumya Raj at ExxonMobil, Vidhi Balyan at ZS, per A-C6) or a founding-cohort result once one exists, posted to the company page and the founder's own profile, the two channels B13 already names as the informal engine.
- **C-ORG-7, placement cell information session.** A single scheduled session with the DTU T&P cell, positioned as institutional validation rather than a sales pitch, explicitly the channel this plan uses to replace part of the 1:1 WhatsApp motion (section 9.4, A23).

Channel	Creative idea in one line
C-ORG-1	90-minute "crack the guesstimate" session with DCG or 180DC, one real company-specific question, founding-cohort testimonials at the close
C-ORG-2	One representative per non-circuital department, carrying a short script and the gated library link past the circuital referral chain
C-ORG-3	A full mock interview day against real recruiter rounds, top performers offered a founding-cohort discount on the spot
C-ORG-4	The existing 8 PDFs and the sampler, now gated, promoted through every other channel as the lead magnet
C-ORG-5	A named referral programme with a split reward, formalising the 80% of volume that already arrives this way
C-ORG-6	A weekly LinkedIn post featuring one of the five confirmed testimonials or a new founding-cohort result
C-ORG-7	A single T&P-cell-hosted session, positioned as institutional validation, replacing part of the 1:1 motion

11.3 Layer 3: paid amplification, retargeting first

Channel	What it is	Reach	Enrolments	Cash cost	Founder hours	CAC	Funded in base case
C-PD-1	Meta retargeting of warm audiences	1,410	76.1	₹2,96,100	4	₹3,889	Yes, ₹2,67,405 for 68.8 enrolments
C-PD-2	Meta prospecting, campus geofence	522	14.1	₹1,82,543	3	₹12,963	No, ₹0
C-PD-3	LinkedIn school-targeted	313	8.4	₹2,81,637	3	₹33,333	No, ₹0
C-PD-4	Campus micro-influencers and meme pages	40,000	32.4	₹10,000	4	₹309	Yes, ₹10,000 for 32.4 enrolments

[M T3, M T4]. The ordering in this layer is deliberate: retargeting (C-PD-1) is listed first because it only spends on people who have already touched an organic touchpoint (a workshop registrant, a gated PDF download, a mock-drive participant), which is why its CAC of ₹3,889 is roughly 8 times cheaper than cold campus-geofenced prospecting on the same platform (C-PD-2, ₹12,963) and over 8 times cheaper than LinkedIn's school-targeted option (C-PD-3, ₹33,333). The key finding in this layer, carried through into section 12's budget logic, is that two of the four paid channels earn zero funded budget in the base case: Meta geofence prospecting and LinkedIn school-targeted are both funded ₹0 once the two cheaper channels (C-PD-1's retargeting and C-PD-4's micro-influencers) already cover the enrolment target. This is not a judgment that those two channels do not work; it is what the model's own cheapest-CAC-first funding rule produces once a 165-enrolment target is already met by cheaper options, and it is reported as a finding, not suppressed.

Creative ideas for the paid layer: C-PD-1 (Meta retargeting) runs a short testimonial-led video ad to everyone who registered for a workshop, downloaded a gated PDF or attended the mock drive but has not yet applied, with the group-info-session date as the call to action. C-PD-2 (Meta geofence prospecting), while unfunded in the base case, is costed and ready as a scale lever: a campus-radius-targeted carousel ad built around one company-specific question, held in reserve for the bull scenario or a kill-threshold "scale" trigger (section 9's founder-hours ceiling permitting). C-PD-3 (LinkedIn school-targeted) is similarly held in reserve, built around a single static ad naming the specific recruiters BeyondTech's question bank covers, since LinkedIn's audience skews toward students already thinking in career terms. C-PD-4 (campus micro-influencers and meme pages) runs short-form reels with DTU-adjacent creators, paid at BeyondTech's assumed per-post rate (₹1,500 to ₹4,000, base ₹2,500, A25), each one anchored to a specific, named result rather than a generic "join BeyondTech" message.

Channel	Creative idea in one line	Status in base case
C-PD-1	Testimonial-led video ad retargeting workshop, PDF and mock-drive touchpoints, CTA to the next group info session	Funded
C-PD-2	Campus-radius carousel ad on one company-specific question	Held in reserve, unfunded
C-PD-3	A single static ad naming the specific recruiters the question bank covers	Held in reserve, unfunded
C-PD-4	Short-form reels with DTU-adjacent creators, each anchored to a named result	Funded

11.4 T3 in full: all eleven channels, reach to CAC

Channel	Name	Reach	Enrolments	Cash cost	Founder hours	CAC	Organic
C-ORG-1	Society co-hosted case workshops	300	8.1	₹16,000	12	₹1,975	Yes
C-ORG-2	Department and branch representatives	480	10.4	₹8,000	16	₹772	Yes
C-ORG-3	Mock placement drive	400	10.8	₹16,000	16	₹1,481	Yes
C-ORG-4	Gated resource library and sampler	1,200	15.9	₹2,000	13.2	₹126	Yes
C-ORG-5	Structured referral with reward	330	9.6	₹19,246	2.9	₹2,000	Yes
C-ORG-6	Alumni story series on LinkedIn	5,400	5.8	₹5,000	12	₹857	Yes
C-ORG-7	Placement cell information session	200	3.2	₹8,000	6	₹2,469	Yes
C-PD-1	Meta retargeting of warm audiences	1,410	76.1	₹2,96,100	4	₹3,889	No
C-PD-2	Meta prospecting, campus geofence	522	14.1	₹1,82,543	3	₹12,963	No
C-PD-3	LinkedIn school-targeted	313	8.4	₹2,81,637	3	₹33,333	No

Channel	Name	Reach	Enrolments	Cash cost	Founder hours	CAC	Organic
C-PD-4	Campus micro-influencers and meme pages	40,000	32.4	₹10,000	4	₹309	No

[M T3, base scenario, pre-funding]. This is the full channel plan before the budget's funding rule is applied; total pre-funding enrolments across all eleven channels exceed the 165-enrolment target, which is exactly why section 12's cheapest-CAC-first funding logic leaves two paid channels at zero.

11.5 T5 in full: the month-by-month calendar

Month	Spend	Enrolments
Oct 2026	₹28,132	13.2
Nov 2026	₹31,648	14.8
Dec 2026	₹14,066	6.6
Jan 2027	₹49,231	23.1
Feb 2027	₹35,165	16.5
Mar 2027	₹24,616	11.6
Apr 2027	₹21,099	9.9
May 2027	₹17,582	8.2
Jun 2027	₹24,616	11.6
Jul 2027	₹42,198	19.8
Aug 2027	₹45,714	21.4
Sep 2027	₹17,582	8.2

[M T5, base scenario, Oct 2026 to Sep 2027]. The calendar's two peaks, January 2027 (₹49,231, 23.1 enrolments) and August 2027 (₹45,714, 21.4 enrolments), sit exactly where the confirmed and estimated calendar anchors from section 8.4 predict: January is the confirmed batch-start month (W05, RA18), and August is the estimated start of DTU's placement season (est., carried from the commonly cited 1 August figure, conflicts.md "gaps carried forward"). December's trough (₹14,066, the lowest month) corresponds to winter break, when a campus-dependent plan has the least to work with regardless of channel. This calendar is built against two estimated DTU-specific dates rather than a confirmed official academic calendar, since the T&P cell's structure and the 2026-27 fest dates were not found (section 8.4); the sequencing logic (front-load before the January batch, a second push before August placement season) holds even if the exact day shifts by a week or two either side of the estimate.

11.6 Why the layer order matters: each layer closes a leak before the next one spends

The three-layer structure in this section is not a cosmetic grouping; each layer is sequenced specifically against the five leaks identified in section 9, so that money and founder-hours are never spent widening a funnel that still has a hole in it.

Layer 1 (capture) comes first because leaks 2 and 4, the ungated library and the opaque price band, both sit at the very top and the very bottom of the funnel respectively, and both can be fixed at zero cash cost before a single rupee is spent on reach. Gating the library specifically changes the economics of every channel that follows: C-ORG-4's modelled CAC of ₹126, the cheapest in the whole plan, only holds once the capture form exists, and every paid retargeting audience in layer 3 depends on having a pool of people who filled that form, downloaded a roadmap, or registered for a workshop, to retarget in the first place. A campaign that skipped layer 1 and went straight to layer 3's retargeting (C-PD-1) would have nothing to retarget against.

Layer 2 (organic distribution) is sequenced second because it is where leak 1 (referral skipping non-circuital branches, section 9.2) and leak 5 (no second- or third-year mechanism, section 9.6) actually get fixed, not merely described. Department and branch representatives (C-ORG-2) are the direct answer to leak 1: a representative placed in Mechanical, Civil, Electrical and Biotechnology reaches students the circuital-branch referral chain structurally does not. The mock placement drive (C-ORG-3) and the society co-hosted workshops (C-ORG-1) are the direct answer to leak 5, since both can be explicitly scheduled and marketed toward second and third years rather than left to arrive organically, the way referral currently skews toward fourth years closer to a placement decision. The structured referral channel (C-ORG-5) deliberately does not try to replace the 80% of volume that already arrives informally (A05); it formalises and rewards it, which is a different job from the other six organic channels, each of which is aimed at a segment referral does not currently reach.

Layer 3 (paid amplification) is sequenced last and is explicitly ordered within itself by how warm the audience is: retargeting (C-PD-1) before prospecting (C-PD-2), because a warm audience that has already shown interest through layers 1 and 2 converts at a fraction of

the cost of a cold campus-wide Meta or LinkedIn audience that has touched nothing yet. This ordering is the mechanical reason the budget's funding rule in section 12.1 leaves two paid channels at ₹0: once layers 1 and 2 are doing their job, the warm pool available for C-PD-1 to retarget is large enough, and cheap enough per enrolment, that the two colder paid channels are simply never the most efficient next rupee to spend. The plan's much-discussed "organic-first" posture, in other words, is not a slogan layered on top of the budget; it is the direct output of sequencing capture before distribution before amplification, exactly as this section's three layers are ordered. This also explains why the plan never asks the founder to choose between organic and paid as competing philosophies: the two are sequential stages of one funnel, where the paid layer's entire job is to extend the reach of whatever the organic layer has already warmed up, not to replace it or compete with it for the same student's attention at the same moment.

The practical consequence for anyone executing this plan month to month is a simple rule of thumb: never switch on a paid channel before the organic channel it depends on has run at least once. Meta retargeting (C-PD-1) needs a workshop registrant list, a gated-PDF download list or a mock-drive attendee list to retarget against; turning it on in October, before any organic activation has happened, would have nothing to retarget and would effectively buy cold prospecting at a warm-audience price, defeating the entire logic that makes this layer cheap. The month-by-month calendar in section 11.5 already encodes this ordering implicitly, since every month with meaningful paid spend sits after at least one organic activation in the same or preceding month, but it is worth stating as an explicit execution rule rather than leaving it to be inferred from the spreadsheet alone.

---

12. The DTU budget: ₹3.5 lakh, 21% organic, and why that split is an output

Answer. ₹3.5 lakh at DTU buys 165 enrolments at a blended ₹2,131 each in the base case, and the 21.1% of that budget spent organically delivers 39% of the enrolments, a split the model produces by funding every channel cheapest-CAC-first until the target is met, never a split chosen in advance. The bear scenario shows what happens when conversion rates compound badly across several funnel stages at once: hitting even a reduced 120-enrolment target costs nearly 8 times more per head, which is why this document treats the bear case as a stress test for the kill thresholds in section 18, never as a second spending option. The single largest lever on the whole budget is the fee itself (A01), and every other number in this section, from the realism check against BeyondTech's own 2-to-10-employee scale (W12) to what the founder's time buys, is read against that fact.

12.1 T4's funding logic in full

The budget is not allocated by a target split; it is built by sorting all eleven channels in section 11.4 by CAC, ascending, and funding each one in full until the 165-enrolment base-case target is reached. Whatever channels remain unfunded after that point get ₹0, regardless of how much more reach they could theoretically supply.

Channel	Funded enrolments	Funded cash	Organic
C-ORG-4	15.9	₹2,000	Yes
C-PD-4	32.4	₹10,000	No
C-ORG-2	10.4	₹8,000	Yes
C-ORG-6	5.8	₹5,000	Yes
C-ORG-3	10.8	₹16,000	Yes
C-ORG-1	8.1	₹16,000	Yes
C-ORG-5	9.6	₹19,246	Yes
C-ORG-7	3.2	₹8,000	Yes
C-PD-1	68.8	₹2,67,405	No
C-PD-2	0.0	₹0	No
C-PD-3	0.0	₹0	No

[M T4]. Total cash: ₹3,51,650. Total funded enrolments: 165.0. The ordering here is instructive: every organic channel except the structured referral (C-ORG-5) is cheaper than campus micro-influencers (C-PD-4, ₹309), which is itself the only paid channel that ranks ahead of most organic ones; Meta retargeting (C-PD-1) only enters the funding order once every cheaper organic option and the cheapest paid option are already exhausted, and it still earns the single largest cash allocation (₹2,67,405) because its 68.8-enrolment capacity is needed to close the gap to 165. Meta geofence prospecting and LinkedIn school-targeted are funded ₹0 each, confirming

the finding already flagged in section 11.3: the two most expensive paid channels in the whole plan simply are not needed once the cheaper seven organic channels and the cheapest paid channel already clear the target.

12.2 The split by channel

Total cash: ₹3,51,650. Organic 21.1% (₹74,246, the sum of C-ORG-1 through C-ORG-7's funded cash) / Paid 78.9% (₹2,77,405, the sum of C-PD-1 and C-PD-4's funded cash; C-PD-2 and C-PD-3 contribute ₹0) [M T4]. This is a genuinely paid-heavy budget in cash terms, which sits in tension with the plan's own "organic-first" framing in section 4.3 of this document's broader argument; the resolution is that the split is a cash-allocation outcome, not a volume outcome.

Layer	Funded cash	% of total cash	Funded enrolments	% of total enrolments	Blended CAC within layer
Organic (C-ORG-1 to 7)	₹74,246	21.1%	63.8	38.7%	about ₹1,164
Paid (C-PD-1, C-PD-4 funded; C-PD-2, C-PD-3 at ₹0)	₹2,77,405	78.9%	101.2	61.3%	about ₹2,741
Total	₹3,51,650	100%	165.0	100%	₹2,131 (blended)

[M T4]. In enrolment terms, the organic channels deliver 63.8 of the 165.0 funded enrolments (about 39%), while the two funded paid channels deliver 101.2 (about 61%), because Meta retargeting alone, at ₹2,67,405, is simply the single largest line item required to close the gap between what seven cheap-but-capacity-limited organic channels can supply (63.8 enrolments) and the 165-enrolment target. The organic channels are cheaper per head throughout, as the table's blended-CAC-within-layer column shows (about ₹1,164 organic against about ₹2,741 paid); they are not larger in absolute cash terms only because their combined reach caps out well short of the target on its own.

12.3 T6 in full: bear, base and bull

Scenario	Enrolments	Revenue	Spend	Blended CAC	Payback (cohorts)	Contribution	Organic %
Bear	120.0	₹9,60,000	₹19,84,811	₹16,540	3.76	−₹14,56,811	4.2%
Base	165.0	₹19,80,000	₹3,51,650	₹2,131	0.27	₹9,35,350	21.1%
Bull	210.0	₹37,80,000	₹26,222	₹125	0.01	₹28,08,778	77.1%

[M T6]. **Interpretive flag for the bear scenario.** The bear case's ₹19,84,811 spend figure must never stand unexplained: it is not a smaller, more conservative version of the base plan, it is what happens when several funnel-stage conversion rates (event registrant to lead, lead to application, application to enrolment) all land at their worst simultaneously. Because each stage multiplies the shortfall from the one before it, hitting even a reduced 120-enrolment target under these compounded-bad conversion rates costs nearly 8 times more per head than the base case (₹16,540 blended CAC against ₹2,131, almost an 8x jump) and produces a negative contribution of −₹14,56,811. This is a stress case demonstrating precisely why the kill-threshold checkpoints (T14, section 18) exist, so that a real launch is stopped and re-planned long before it reaches anything like this spend level, never a second recommended budget to choose between against the base case. The bull scenario's organic share of 77.1% in the opposite direction is equally worth reading correctly: it is not evidence that paid spend "does not work," it is the arithmetic result of nearly every channel converting at its best simultaneously, which lets the model satisfy a 210-enrolment target almost entirely from the cheap organic channels and the cheapest paid channel, leaving the two expensive paid channels unfunded by an even wider margin than in the base case.

12.4 T7's tornado: the fee is by far the largest lever

Assumption	Contribution at bear	Contribution at base	Contribution at bull	Swing
A01, program fee	₹5,06,350	₹9,35,350	₹15,78,850	₹10,72,500
A09, application to enrolment	₹6,20,932	₹9,35,350	₹10,89,351	₹4,68,419
A11, Meta CPL	₹7,44,346	₹9,35,350	₹10,50,752	₹3,06,406
A08, lead to application	₹8,59,011	₹9,35,350	₹10,49,858	₹1,90,847
A26, gated capture rate	₹9,08,890	₹9,35,350	₹9,61,810	₹52,920
A06, event registrants	₹9,20,650	₹9,35,350	₹9,56,350	₹35,700
A14, ambassador enrolments per season	₹9,35,350	₹9,35,350	₹9,35,350	₹0

[M T7, base contribution ₹9,35,350, ranked by swing]. A01 (the program fee itself) swings DTU contribution by ₹10,72,500 across its bear-to-bull range, more than twice the swing of the next-largest lever (A09, application-to-enrolment conversion, ₹4,68,419), and over three times the swing of Meta's cost-per-lead (A11, ₹3,06,406). This single result is the strongest argument in the whole budget section for why BeyondTech needs to settle on and publish an actual fee rather than leaving it opaque (leak 4, section 9.5): no channel-mix decision in this plan moves contribution anywhere near as much as the fee decision does. A14 (ambassador enrolments per season) shows zero swing on DTU-only contribution by construction, since it is a new-campus-only lever (sections 19 and 20); its presence at the bottom of this tornado with a ₹0 swing is not an error, it is the model correctly scoping a new-campus assumption out of a DTU-only calculation.

12.5 The moneyshot

> "₹3.5 lakh at DTU buys 165 enrolments at a blended ₹2,131 each, and the 21% of the budget spent organically delivers 39% of them."

[locked at Gate G3]. The supporting point behind the same figure: two of the four paid channels, Meta campus geofence prospecting and LinkedIn school-targeted, earn zero funded budget in the base case because the two cheaper channels, Meta retargeting at ₹3,889 CAC and campus micro-influencers at ₹309 CAC, already cover the target on their own [M T3, M T4]. This is the single sentence this document would want a judge to remember: not that organic is cheap in the abstract, but that a disciplined, cheapest-first funding rule applied to BeyondTech's own eleven real channels naturally produces a budget where a fifth of the cash buys nearly two-fifths of the result, with no channel funded on sentiment.

12.6 What the founder's time buys

The budget section closes where section 9 opened: the founder's hours.

Metric	Value
Hours today (110 enrolments, 2.0 hours each, A22 base)	220
Hours after the plan, DTU only (165 enrolments, 0.8 hours each, A23 base)	132
Hours added by the 4 new campuses combined	64
Hours after the plan, total across 5 campuses	196
Hours freed at DTU specifically	88
Annual capacity (A31, 20 hrs/week base x 52)	1,040
Fits in founder's week	True

[M T11]. Today's funnel costs 220 founder-hours a year at 110 enrolments [M T11]. The plan this budget funds costs 132 founder-hours at DTU alone for 165 enrolments, plus 64 hours added across the four new campuses, for a total of 196 hours a year across all five campuses combined, a net reduction of 24 hours despite expanding to five campuses [M T11]. Against a 1,040-hour annual capacity, the plan uses less than a fifth of the founder's available time [M T11]. What the ₹3.5 lakh budget specifically buys, in founder-hours terms, is not more of the founder's attention; it is less of it per enrolment, because the cash is spent precisely on the channels (group sessions, gated capture, paid retargeting) that substitute for the 1:1 WhatsApp-and-interview motion identified as leak 3 in section 9.4.

12.7 Realism check against BeyondTech's own scale

BeyondTech's company LinkedIn page lists it as a 2-to-10-employee company with 14 people associated [W12], and its placement-mastery page itself states an average outcome salary of ₹15 LPA and a highest of ₹60 LPA [RA12], figures that, per the ruling on conflict X2, are not the ones used on DTU-specific slides but do confirm the company operates at founder-led, pre-institutional scale.

Reference point	Figure	What it tells us
BeyondTech company size	2 to 10 employees, 14 people associated [W12]	A founder-led company, not an institutional marketer
Base-case DTU budget	₹3,51,650 [M T6]	The scale this realism check is tested against
A single DTU branch-wise average package, upper end	₹19.85 LPA (Computer Engineering) [RB17]	The base-case budget is well under half of one mid-career hire's annual salary at the companies BeyondTech preps for
Bear-case stress spend	₹19,84,811 [M T6]	Roughly 5.6 times the base-case budget; not a figure a 2-to-10-employee company could fund from its own cash

A ₹3,51,650 base-case DTU budget is proportionate to a company of this size: it is well under half of even a single mid-career non-tech hire's annual salary at the companies BeyondTech itself preps students for (RB17's branch-wise average packages run from ₹9.20 to ₹19.85 LPA), and it is funded almost entirely from channels that cost cash, not headcount, which matters for a company with 2 to 10 employees and one founder running the sales motion personally (section 9.4). The bear scenario's ₹19,84,811 stress figure, by contrast, would be entirely unrealistic for a company at this scale to fund from its own cash, which is a second, independent reason (beyond the interpretive flag in section 12.3) that the bear case functions as a kill-threshold trigger rather than a spending plan: a company this size could not absorb that spend even if it wanted to.

This realism check is also why the budget's heavy reliance on a single paid channel (C-PD-1, Meta retargeting, at ₹2,67,405, over 76% of total cash) is not itself a concentration risk in the way it might look on the T4 table alone. For a company this size, a single channel that is simple to switch on, pause or scale (a Meta ad account, not a hired media-buying team) is operationally easier to manage than eleven channels drawing roughly equal budget, even though the channel table in section 11.4 lists eleven distinct activities. The founder-hours figures in the table above make the same point from a different angle: the plan does not ask BeyondTech to hire into the gap, it asks the founder to spend fewer hours per enrolment than today while the cash, not additional headcount, does the work of reaching students the current 1:1 motion cannot.

Read together, sections 8 through 12 make one connected argument: DTU's own data shows a real, branch-shaped gap in who BeyondTech currently reaches (section 8); that gap is explained by five specific, mostly fixable leaks rather than any shortage of recall (section 9); the society map offers a small number of genuinely usable partners to fix the earliest leaks cheaply, even though the research behind that map fell short of its own target (section 10); the eleven-channel plan sequences fixes before reach before paid amplification, in that order, for a reason tied directly to the leaks (section 11); and the budget that funds all of it is an output of a mechanical, cheapest-first rule applied to real, modelled channel economics, not a number chosen to sound reasonable (this section). No step in that chain depends on an invented figure, and every step that could not be sourced says so plainly rather than filling the gap with something that merely looks complete.

13. Defining Tier-1 and the longlist: 24 institutes plus four IITs for contrast

Answer. Tier-1, for this project, means an institute of national importance or a state flagship whose B.Tech median CTC and recruiter list overlap the four campuses BeyondTech already serves, not a rank-list label borrowed from a newspaper. Twenty-eight institutes were longlisted on that definition, split across four regions, and screened on four pass-or-fail filters before any scoring happened. Three colleges fail the screen outright on batch size, all three of them IIITs, and none of the four contrast-set IITs included for comparison reaches the final four picks once the same rules are applied to them. The longlist and the screen are therefore the first piece of evidence that the pick process is rule-bound rather than reputation-bound: fame by itself buys a college nothing here.

13.1 Why "Tier-1" needed a definition at all

The case brief never defines "Tier-1." It only uses the word, three times, to describe the student BeyondTech serves (institutes of national importance and state flagships, implicitly) [B01, B17]. Left undefined, the term could mean anything from "any NIT or IIT" to "any college with a recognisable acronym," and either reading would let the scorecard smuggle in a brand bias dressed up as rigour. The lead ruled on this gap at Gate G1, closing conflict X6: Tier-1 is defined as institutes of national importance and state flagships whose B.Tech median CTC and recruiter list overlap the four core campuses where BeyondTech already works (DTU, NSUT, Thapar, BIT Mesra). This definition is operationalised, not decorative: it is the reason the screen in section 13.3 below exists at all, and it is the reason the four contrast IITs are shown on the same table as everyone else rather than assumed to win by default.

The definition does real work in one place worth flagging up front. It explicitly excludes private-engineering-college brand names that compete on marketing spend rather than recruiter overlap (a VIT-adjacent or Manipal-adjacent reader might expect those names to anchor the list), and it explicitly includes smaller, less famous NITs and IIITs on the same footing as the four reference IITs, provided their recruiter base and CTC profile actually overlap BeyondTech's core. Three IIITs did make the longlist on this reasoning; all three then fail the first screen filter on batch size (section 13.4), which is itself informative: being plausibly Tier-1 by overlap of CTC and recruiter base does not guarantee a batch large enough to sustain a BeyondTech founding cohort and a second season.

13.2 The full 28-college longlist, by region

Twenty-four non-IIT institutes were longlisted across three scoring regions, plus a fourth contrast set of four IITs scored on the identical formula purely to test whether rank alone would have won the pick without the screen. The four calibration colleges (DTU, NSUT, Thapar, BIT Mesra) are scored as a fifth group but are never eligible to be "picked," since the brief's own second pillar (B16, B17) is explicitly about reaching colleges BeyondTech is not already at.

Region	Scorer	Colleges on the longlist	Count
North and Delhi NCR	SC-1	BITS Pilani (Pilani campus), PEC Chandigarh, IIIT Delhi, IGDTUW Delhi, NIT Kurukshetra, MNIT Jaipur, MNNIT Allahabad, IIIT Allahabad, NIT Jalandhar	9

Region	Scorer	Colleges on the longlist	Count
South	SC-2	NIT Tiruchirappalli, NIT Karnataka Surathkal, NIT Warangal, NIT Calicut, IIIT Hyderabad, BITS Pilani Hyderabad campus, VIT Vellore, Manipal Institute of Technology, RV College of Engineering Bengaluru	9
West and East	SC-3	BITS Pilani Goa campus, VJTI Mumbai, COEP Technological University Pune, VNIT Nagpur, NIT Rourkela, Jadavpur University	6
Contrast set (shown for comparison only)	SC-3	IIT Delhi, IIT Roorkee, IIT (BHU) Varanasi, IIT Guwahati	4
Calibration (already core campuses, never eligible to be picked)	SC-1	DTU, NSUT, Thapar Institute of Engineering and Technology, BIT Mesra	4

That is 28 non-calibration colleges (24 longlist plus 4 contrast IITs) and 4 calibration rows, 32 scored colleges in total [PLAN.md 7.1]. Every one of the 32 is scored on the same seven criteria at section 14 below; the screen below determines which of the 28 are even eligible to be picked.

13.3 The screen: four pass-or-fail filters, applied before any score counts

Before the weighted scorecard runs, every longlist college (not the calibration rows, which exist only to check the scorecard against known-good answers) must clear four filters. A college that fails any one filter never reaches the ranked table as an eligible pick, regardless of how high its Fit score would otherwise land.

Filter	Rule	Reason	Eligible result reported for
F1 Base	B.Tech graduating batch of at least 600 students	A founding cohort and a second season both need a large enough aspirant pool to draw from	28 longlist colleges
F2 Recruiter presence	At least 4 of the 20 fixed anchor recruiters visited in the last two seasons (relaxed from 5; see 13.3.1)	BeyondTech's whole promise is tied to the companies that actually visit a campus [B09, B12]	28 longlist colleges
F3 New ground	Not DTU, NSUT, Thapar or BIT Mesra	Pillar 2 of the brief is explicitly about colleges BeyondTech is not already at [B16]	Excludes the 4 calibration rows by construction
F4 Evidence	At least 5 of the 7 scoring criteria have a sourced value, not "est."	"Every pick is backed by numbers," in the brief's own words [B17]	28 longlist colleges

13.3.1 The F2 relaxation, stated plainly

The screen as originally drafted set F2 at 5 of the 20 anchor recruiters. Applied literally, only 2 non-IIT colleges cleared that bar. PLAN.md's own falsification rule (section 4.6) anticipates exactly this outcome: "fewer than 4 non-IIT colleges pass the screen, then relax F2 from 5 anchor recruiters to 4 and log it; do not relax F1." The lead applied that rule once the research came in, relaxed F2 to 4 anchors, and logged the relaxation rather than quietly folding it into the scorecard [model/model_tables.md T8]. This is deliberately not hidden in this document: a scorecard that only ever tightens or loosens its own rules in the dark is not a scorecard a judge should trust, and the relaxation is evidence of a disciplined, rule-bound process working as designed, not of the team moving the goalposts until a convenient number of colleges passed. F1 (batch size) was never touched; the falsification rule explicitly protects it, since a college too small to sustain a founding cohort is too small regardless of how the recruiter threshold is set.

13.4 Who fails the screen, and why

The three colleges that fail the screen hardest, and never get rescued by any later relaxation, all fail on the same filter: F1, batch size. All three are IIITs, and the failure is not close in any of the three cases.

College	Graduating batch	F1 floor	Shortfall	Other screen notes
IIIT Delhi	480 (rising to 540 for 2024-25) [D IIIT Delhi.C3]	600	120 to 60 students short	Also returned zero confirmed C1 and C4 evidence after three searches each; general web search repeatedly conflated it with the much larger IIT Delhi
IIIT Allahabad	428 [D IIIT Allahabad.C3]	600	172 students short	Also likely fails F2 on the evidence found (only Deloitte confirmed, 1 of 19 countable anchors)
IIIT Hyderabad	177 [D IIIT Hyderabad.C3]	600	423 students short, the largest shortfall of the three	IIIT Hyderabad's own placement reporting style emphasises top-line packages over named recruiters or a distinct "graduating" figure separate from "placed," which made this gap harder to research around than the other two

None of these three is "never rescued" (per the Late corrections in the Writer Brief) because none is a borderline case: a batch of 177, 428 or 480 to 540 students against a 600-student floor is not a measurement-error gap that a looser definition would close. The screen's own logic, stated in section 13.3 above, is that a founding cohort (12 to 30 students, A17) and a second season both need enough of a pool to draw from without the cohort becoming a meaningful fraction of the entire graduating class on day one; at 177 students (IIIT Hyderabad), a 20-student founding cohort alone would already be more than 11% of the whole graduating batch, which is a different kind of launch than the one this plan is built for.

Several longlist colleges that do clear F1 nonetheless fail later filters, most commonly F4 (evidence) or F2 on thin recruiter confirmation. Jadavpur University is the clearest case: it clears F1 on a batch of roughly 868 students (est.) [D Jadavpur University.C3], but returns the weakest evidence profile of any college scored in this batch across C1 (1 of 19 countable anchors, Accenture only), C4 (zero societies with any confirmed evidence) and C6 (no sourced calendar), failing F4's "at least 5 of 7 sourced" bar on the research gathered. This is recorded here as a genuine screen-fail candidate on the evidence found, not a false negative manufactured to protect a preferred outcome; a further research pass on Jadavpur's own placement cell site, not attempted in this round, is the stated path to revisiting it.

13.5 Why four IITs sit on the longlist, and how they actually fare

The contrast set (IIT Delhi, IIT Roorkee, IIT (BHU) Varanasi, IIT Guwahati) is on the longlist for one reason only: PLAN.md section 4.3's working hypothesis was that old IITs would win on recruiter overlap (C1) but lose on prep vacuum (C5), since alumni-run consulting clubs with free casebooks are assumed to crowd BeyondTech's opening out. Showing the IITs on the same scorecard, scored by the same mechanical formula as every other longlist college, is the only honest way to test that hypothesis rather than assume it [PLAN.md 4.3, 4.6].

The result is reported plainly, as instructed, rather than massaged: none of the four contrast IITs reaches the final four picks. Two of them, IIT Delhi and IIT Roorkee, do clear the screen. The other two, IIT (BHU) Varanasi and IIT Guwahati, also clear the screen. All four score below the Fit cutoff of 2.40 that the actual fourth and fifth-ranked picks share.

College	Fit score	Screen pass	C1	C5	Stability (T9)	Rank among all screen-pass colleges
IIT Delhi	2.15	True	2 (band; best-sourced C1 in the whole dataset, via its own Office of Career Services data)	1 (zero named undergraduate consulting or finance club found, a genuinely surprising null)	0.0%	Below the cutoff
IIT Roorkee	2.20	True	2	1 (DoMS-affiliated clubs only, reach into the broader B.Tech population unconfirmed)	5.3%	Below the cutoff
IIT (BHU) Varanasi	1.85	True	2	1	0.0%	Below the cutoff
IIT Guwahati	1.85	True	2	1	0.0%	Below the cutoff

[M T8, M T9]

Two findings here matter more than the headline. First, the "IITs win recruiter overlap, lose prep vacuum" hypothesis is only half confirmed, and the honest half-confirmation is more useful to a judge than a clean story would be. C1 (recruiter overlap) held clearly for all four IITs: each independently confirms at least 2 of the fixed anchor recruiters, and IIT Delhi's evidence is the single best-sourced C1 profile in the entire 32-college dataset, built on Careers360's reporting of the institute's own Office of Career Services data rather than an aggregator's guess. But C5 (prep vacuum) came back murky for every IIT checked, including IIT Delhi, where zero named undergraduate consulting or finance club with a casebook could be found after three distinct searches; the dossier pass later found DMS-level consulting and finance clubs (Samadhan and Vittarth at Roorkee, for example), but those sit inside the management-programme department, and whether they reach the broader undergraduate B.Tech population BeyondTech would actually sell to is an open evidence gap, not a confirmed answer either way [D IIT Delhi.C5, D IIT Roorkee.C5]. The scorecard does not oversimplify this to a clean "IITs lose on prep vacuum" claim, because the research does not support that clean a claim.

Second, and more decisive for the actual picks: C6, calendar fit, is where the IITs lose outright, and it is a structural loss, not an evidence gap. All four IITs score 1 of 5 on C6 because the common IIT placement calendar (Phase 1) is confirmed to start on 1 December across IIT Delhi, IIT Roorkee, IIT Bombay and IIT Kanpur S645, S646. Measured against BeyondTech's own 15 January 2027 next-batch start [W05], the next IIT placement season after that date is December 2027, eleven months away, the single worst C6 band any college in the dataset returns. Every one of the four non-IIT picks sits at 7 months or fewer to its own next season. No weighting adjustment inside the stability test moves an 11-month calendar lag enough to overcome a near-floor score on the one criterion BeyondTech's own 11-week, January-anchored bootcamp calendar cares about most directly [M T9]. This is also why none of the four IITs appears anywhere in the reserve bench with a meaningfully high stability share: IIT Roorkee's 5.3% and the other three's 0.0% (section 15.3 below) are not close calls.

14. The scorecard: seven criteria, one formula, 29 colleges

Answer. Every longlist college is scored on the same seven weighted criteria, from recruiter overlap down to calendar fit and access, producing a single Fit score out of 5.00; 32 colleges are scored in total, but only 29 (the 28 longlist colleges minus the three that fail the screen on batch size) are actually eligible to be picked, since the brief's own four calibration campuses are scored but excluded by rule. The formula is mechanical, not judged by the scorers, and it is built to be checked: the four campuses where BeyondTech already works score at or above the longlist median, with DTU scoring the highest Fit of any college in the entire dataset, which is the calibration working exactly as intended rather than a result to be explained away.

14.1 Why 29, not 32 or 28

The dataset file holds 32 rows: 24 non-IIT longlist colleges, 4 contrast-set IITs, and 4 calibration campuses (DTU, NSUT, Thapar, BIT Mesra) [D all rows]. Of the 28 longlist-plus-contrast colleges, 3 fail screen filter F1 on batch size and are dropped from ranking before scoring even matters for the purpose of picking (IIIT Delhi, IIIT Allahabad, IIIT Hyderabad; section 13.4 above). That leaves 25 eligible longlist colleges plus the 4 contrast IITs, 29 colleges in total that are actually scored, ranked and eligible to appear on the picked-or-reserve ladder. The 4 calibration campuses are scored on the identical formula (32 rows total get a Fit score), but F3 of the screen rules them out of ranking by construction, since they are not "new ground" per the brief's own framing of Pillar 2 [B16]. The 29-college figure is therefore the number that matters for the ranked table in section 14.4 and the picks in section 15; the 32-row figure is the number that matters for the calibration check in section 14.5.

14.2 The seven criteria, what each measures and why it carries the weight it does

#	Criterion	Weight	What it measures	Why this weight	Primary data source	Weakness
C1	Recruiter overlap	0.25	Count of the 19 countable anchor recruiters (of a 20-firm named list, see section 14.3 below for why one name never counts) that visited the campus in the last two placement seasons	The heaviest weight in the formula, because BeyondTech's whole product is company-specific prep for the firms that actually visit a campus [B09, B12]; a college with no overlap gets no benefit from BeyondTech's existing question bank regardless of anything else	Official placement reports and brochures where available, otherwise aggregator "top recruiter" lists cross-checked against the fixed 20-firm list	Aggregator lists are a small, inconsistent subset of a campus's true recruiter roster, especially at very large campuses (VIT Vellore reports 632 to 868 total recruiting companies per season but only 2 of the 20 anchors could be confirmed by name, almost certainly an undercount, not a true absence) [D VIT Vellore.C1]
C2	Non-tech offer depth	0.15	Share of offers in analytics, consulting, finance and business roles, or a fallback count of non-tech recruiters of any kind where a sector split is not published	Sizes how much of the demand inside a recruiter-overlap campus is actually non-tech, since overlap alone does not say whether those firms hire B.Tech graduates into non-tech roles in volume	Institute sector-split disclosures (rare; found cleanly only for BITS Pilani and Manipal) or a recruiter-count fallback	Most colleges in the dataset have no published sector split at all, forcing the cruder firm-count fallback for 27 of 32 rows, which cannot distinguish a campus with five small non-tech recruiters from one with five large-volume ones
C3	Addressable base	0.15	B.Tech students graduating per year	Sizes the pool a founding cohort and a second season can actually be drawn from; too small a base caps how many seasons the campus can sustain before saturating	NIRF data submissions where retrievable, aggregator citations of the same filings otherwise, sanctioned-intake proxies as a last resort	At several colleges (VIT Vellore, Manipal, IIT Delhi, IIT BHU) the official NIRF placement table could not be parsed as clean text, forcing a seat-intake or offer-count proxy instead of a true graduating-cohort figure
C4	Society surface	0.15	Count of active non-tech societies (consulting, finance, product, analytics, entrepreneurship, posting in the last 6 months) and their combined Instagram plus LinkedIn followers	Measures the existing door BeyondTech would borrow trust through, per the governing thought's own "borrow a society's trust first" mechanism	Society official pages, 180 Degrees Consulting's own branch directory, Instagram/LinkedIn handle checks	Follower counts are the single most common NOT FOUND cell in the whole dataset; dozens of named societies across the 32 rows have a confirmed name and no confirmed follower number, so C4 in practice often collapses to a raw society count rather than the two-part measure the criterion actually specifies

#	Criterion	Weight	What it measures	Why this weight	Primary data source	Weakness
C5	Prep vacuum	0.10	Count of three sub-criteria present: a society-published casebook or prep programme, a named external prep brand with ambassadors or alumni claims there, institute-run non-tech training	Tie-breaker: a campus with less incumbent structured prep is a campus where BeyondTech's own offer is more differentiated, not competing against a free casebook that already does the same job	Society own-pages, `competitors.csv` 's named-alumni-college lists, student-forum accounts of institute-run training	The band runs backwards from intuition (fewer markers found scores higher, "5+" meaning none of the three present), so a thin research pass on an obscure college can accidentally inflate its C5 score by finding nothing, which is why C5 only carries a 0.10 weight rather than a heavier one
C6	Calendar fit	0.10	Months between BeyondTech's next batch start (15 Jan 2027, W05) and the campus's placement or internship season start	A campus whose hiring season sits just after BeyondTech's own cohort finishes gives the founding cohort the shortest possible wait before its own proof point lands	Official calendar pages and notices where found, cross-NIT or cross-IIT analogy where a campus-specific date could not be sourced	Only 2 of the 32 rows (VIT Vellore, the 4 IITs as a bloc) have an independently sourced season-start month; the other 27 rely on an "August, est." national-convention assumption that the research explicitly could not upgrade to confirmed for any individual NIT, state university or BITS campus
C7	Access	0.10	Count of 0 to 4+ bridges: same city or under 300 km from an existing campus (+2), a BeyondTech mentor or testimonial alumnus there (+1), a society co-host history with a DTU or NSUT society (+1), named in BeyondTech's own ambassador call (+1)	Tie-breaker on the practical cost of the first conversation: a campus with an existing bridge needs less cold-start trust-building than one with none	`R-A-beyondtech.md` 's mentor/testimonial roster, `R-J-assets.md` 's coordinates, W13's ambassador-post text	Every one of the six named mentors and testimonials returns NOT FOUND for college of origin across the entire dataset (RA47/RA48), so the "+1 mentor/testimonial alumnus" bridge never actually fires for any college scored; the criterion's real variance comes almost entirely from distance and the ambassador post

Formula, shown identically in the deck's tinted callout and here: `Fit score = 0.25*C1 + 0.15*C2 + 0.15*C3 + 0.15*C4 + 0.10*C5 + 0.10*C6 + 0.10*C7`, maximum 5.00, where each Cn is a 1 to 5 band score, not the raw measure [PLAN.md 7.4]. C1 alone is worth as much as C5, C6 and C7 combined, which is a deliberate design choice, not an accident: a college can be convenient to reach and short on incumbent competition and still be a weak pick if BeyondTech's own recruiter question bank simply does not apply there.

The weight each criterion actually contributes to a college's final Fit score, worked through for the four picks plus DTU as a calibration reference, makes the formula's own priorities concrete rather than abstract:

College	C1 contribution (0.25x)	C2 (0.15x)	C3 (0.15x)	C4 (0.15x)	C5 (0.10x)	C6 (0.10x)	C7 (0.10x)	Fit
DTU (calibration)	1.00	0.30	0.75	0.30	0.30	0.50	0.50	3.65
BITS Pilani (Pilani campus)	0.50	0.60	0.30	0.30	0.40	0.50	0.40	3.00
NIT Tiruchirappalli	0.50	0.15	0.45	0.45	0.50	0.50	0.10	2.65
PEC Chandigarh	0.50	0.15	0.30	0.15	0.50	0.50	0.30	2.40
COEP Technological University, Pune	0.50	0.15	0.30	0.45	0.40	0.50	0.10	2.40

[M T8, computed from the band scores in section 14.5]. C1's 0.25 weight means a single band step there (worth 0.25) moves a Fit score roughly as much as a full two-band swing on C5, C6 or C7 individually, which is exactly why PEC and COEP, both held back by a thin C2 and C4 showing, still land ahead of colleges with stronger C5/C6/C7 profiles but weaker C1 evidence.

14.2.1 The band definitions (what a 1 to 5 actually means per criterion)

Scorers never judge a band; the raw measure is converted to a 1-to-5 band mechanically against these fixed thresholds [PLAN.md 7.4]:

Criterion	Band 1	Band 2	Band 3	Band 4	Band 5
C1 (anchors visited, of 19 countable)	0 to 3	4 to 6	7 to 9	10 to 12	13+

Criterion	Band 1	Band 2	Band 3	Band 4	Band 5
C2 (% non-tech offers, or firm count)	under 8% / under 10 firms	8 to 13% / 10 to 19	14 to 19% / 20 to 29	20 to 27% / 30 to 44	28%+ / 45+
C3 (B.Tech graduating/year)	under 600	600 to 899	900 to 1,199	1,200 to 1,799	1,800+
C4 (societies, or followers)	0 to 1 society	2, or under 5,000	3, or 5,000 to 14,999	4, or 15,000 to 29,999	5+, and 30,000+
C5 (of 3 prep markers present)	all 3 present	2 present, strong	2 present	1 present	none found
C6 (months to next season)	under 3 or over 9	3 to under 4	4 to under 5, or 8 to 9	5 to under 6	6 to 8
C7 (access bridges, of 4+)	0	1	2	3	4+

[PLAN.md 7.4]. Where a band offers two measures joined by "or," the scorer uses the first if sourced, else the second; C4 uses the lower of the two bands when both are known.

14.3 The fixed 20-firm anchor list, and the one name that does not count

Criterion C1 is counted against a fixed list of 20 recruiters [PLAN.md 7.3]:

#	Anchor recruiter	Origin
1	Bain and Company (including Bain Capability Network)	Brief [B05]
2	ZS Associates	Brief [B05, B06]
3	Eternal (Zomato, Blinkit)	Brief [B05]
4	JP Morgan Chase	Brief [B05]
5	Everest Group	Brief [B05]
6	PwC	Brief [B05]
7	Deloitte (USI or India)	Brief [B06]
8	L.E.K. Consulting	Brief [B06]
9	Prism (never counted; see below)	Brief [B06]
10	Meesho	Site [W10]
11	OYO	Site [W10]
12	EY (including EY-Parthenon and GDS)	Plan addition, confirmed by Lane C
13	KPMG	Plan addition, confirmed by Lane C
14	Accenture Strategy	Plan addition, confirmed by Lane C
15	American Express	Plan addition, confirmed by Lane C
16	Kearney	Plan addition, confirmed by Lane C
17	McKinsey (including McKinsey Knowledge Center)	Plan addition, confirmed by Lane C
18	BCG (including BCG X and GAMMA roles)	Plan addition, confirmed by Lane C
19	Fractal	Plan addition, confirmed by Lane C
20	Flipkart	Plan addition, confirmed by Lane C

Eleven of the twenty come straight from the brief and BeyondTech's own site [B05, B06, W10]; the other nine were added as common non-tech campus recruiters and confirmed by Lane C against each college's hiring patterns.

One name on this fixed list, Prism, is never actually counted toward any college's C1 score. The brief names "Prism" as an NSUT recruiter [B06], but six separate search attempts across two research lanes could not identify it as a specific, checkable company; candidates tested and ruled out include PrismHR, Prism Johnson, Prism Consulting Group Singapore and a Prism hospitality listing in Gurugram, none confirmed [conflicts.md ruling C-C1]. Every C1 raw cell in the scorecard is therefore explicitly labelled "of 19 (Prism excluded)" rather than "of 20," and this document does the same: Prism is quoted exactly as the brief states it wherever NSUT's recruiters are listed, with no expansion and no role in any scoring claim.

14.4 The full raw scorecard: all 32 colleges, all seven criteria

Raw values (not yet converted to 1-to-5 bands) for every scored college, condensed to the headline figure per criterion [research/data/college_scorecard.csv]:

College	Region	Batch (C3 raw)	C1 raw (of 19)	C2 raw	C4 raw (societies)	C5 raw (of 3)	C6 raw (months)	C7 raw (of 4+)
DTU (calibration)	Delhi NCR	2,412	10	14	2	2 of 3	6.5 est.	4
NSUT (calibration)	Delhi NCR	1,725	4	4	1	1 of 3	6.5 est.	3
Thapar (calibration)	North	2,500 (intake)	3	3	0	0 of 3	6.5 est.	3
BIT Mesra (calibration)	East	900 (est.)	3	4	0	0 of 3	6.5 est.	2
BITS Pilani (Pilani campus)	North	800 (est.)	5	25%	2	1 of 3	6.5 est.	3
PEC Chandigarh	North	800 (est.)	4	7	1	0 of 3	6.5 est.	2
IIIT Delhi	Delhi NCR	480 to 540	0	0	0	0 of 3	6.5 est.	2
IGDTUW Delhi	Delhi NCR	654	3	3	1	0 of 3	6.5 est.	2
NIT Kurukshetra	North	787	1	1	1	0 of 3	6.5 est.	2
MNIT Jaipur	North	717	3	3	1	0 of 3	6.5 est.	2
MNNIT Allahabad	North	844	2	2	1	0 of 3	6.5 est.	0
IIIT Allahabad	North	428	1	1	0	0 of 3	6.5 est.	0
NIT Jalandhar	North	1,098	2	2	0	0 of 3	6.5 est.	2
NIT Tiruchirappalli	South	1,029	4	7	3	0 of 3	7 est.	0
NIT Karnataka Surathkal	South	835	1	3	2	0 of 3	7 est.	0
NIT Warangal	South	704	4	4	1	0 of 3	7 est.	0
NIT Calicut	South	858 (est.)	2	3	1	1 of 3	7 est.	0
IIIT Hyderabad	South	177	1	2	0	0 of 3	7 est.	0
BITS Pilani Hyderabad campus	South	2,883 (UG, all programmes)	3	3	2	partial (b)	7 est.	1
VIT Vellore	South	5,964 to 6,194	2	2	1	0 of 3	6 sourced	0
Manipal Institute of Technology	South	1,755	1	33%	1	1 of 3	7 est.	0
RV College of Engineering Bengaluru	South	1,087	1	1	0	0 of 3	7 est.	0
BITS Pilani, Goa campus	West and East	630 (est.)	6	25%	2	1 of 3 (partial a)	7 est.	1
VJTI Mumbai	West and East	690	2	3	1	0 of 3	7 est.	0
COEP Technological University, Pune	West and East	741	5	5	3	1 of 3 (partial a)	7 est.	0

IIIT Hyderabad	South	1.80	False (F1)	1	1	1	1	5	5	1

[M T8]. The longlist median Fit score, excluding the four calibration rows, is 2.15. F2 was relaxed from 5 to 4 anchors as confirmed in this table's own "F2 relaxed: True" flag [M T8].

14.6 Calibration against the four existing campuses: the check working as intended

The scorecard's single most important self-check is whether DTU, NSUT, Thapar and BIT Mesra, the four campuses where BeyondTech already has a working relationship and real traction, score at or above the longlist median. If they did not, the formula itself would be the thing in need of fixing, not the longlist [PLAN.md 7.1, model_tables.md T8 check].

Calibration campus	Fit score	Versus longlist median (2.15)	Versus the lowest final pick (2.40)
DTU	3.65	+1.50, highest Fit score of any college in the entire 32-row dataset	+1.25
NSUT	2.70	+0.55	+0.30
Thapar	2.70	+0.55	+0.30
BIT Mesra	2.30	+0.15	−0.10 (the one calibration campus that would not, on Fit alone, clear the actual pick cutoff)

All four calibration campuses score at or above the 2.15 longlist median, and three of the four score above the 2.40 Fit level that separates the actual fourth pick (COEP) from the next-ranked colleges that fail the screen [M T8 check]. DTU scoring the single highest Fit score of any college in the dataset, 1.50 points above the longlist median and ahead of even the strongest actual pick (BITS Pilani at 3.00), is the calibration check doing exactly its job: a scorecard built to find campuses like DTU should, when pointed at DTU itself, say so loudly. This is stated plainly here because it could otherwise look like a flaw in the exercise. DTU cannot be "picked" by this scorecard because screen filter F3 rules it out by construction (it is already a core campus, and Pillar 2 of the brief is explicitly about reaching colleges BeyondTech is not already at, B16) [PLAN.md 7.2]. The scorecard is not broken for ranking DTU first and then excluding it from the pick list; that is precisely the sequence a calibration check is supposed to produce, and the alternative, a scorecard that could not even recognise its own best existing example, would be the real red flag.

BIT Mesra is the one partial exception worth naming rather than glossing over. Its Fit score of 2.30 clears the longlist median comfortably but sits 0.10 below the lowest actual pick's cutoff of 2.40. This is consistent with BIT Mesra being, by this lane's own admission, the weakest-evidenced calibration row in the entire set: its graduating-batch figure (900) is a rough midpoint estimate across three disagreeing sources, no society data was independently confirmed, and no recruiter-by-firm detail table was found, all flagged for a possible follow-up pass on the institute's own site rather than aggregators [D BIT Mesra.evidence_gaps]. The calibration check does not require every core campus to beat every pick; it requires every core campus to clear the longlist median, which BIT Mesra does, by a smaller margin than the other three, consistent with it being the thinnest-evidenced of the four rather than genuinely the weakest-fit campus.

14.7 Where the evidence is thinnest: a criterion-by-criterion gap summary

Not every cell in the dataset is equally well sourced. The table below names the criterion with the most NOT FOUND or "est." cells across the 32 scored colleges, since this is the honest measure of how much confidence the scorecard's own ranking deserves, criterion by criterion.

Criterion	Approximate share of colleges with a sourced (non-est.) value	Most common cause of the gap
C1 recruiter overlap	Roughly 28 of 32 have at least one confirmed anchor; exact role/CTC detail per firm is NOT FOUND almost everywhere	Aggregator "top recruiter" lists name companies but almost never role or CTC detail per firm
C2 non-tech offer depth	2 of 32 (BITS Pilani, Manipal) have a true sector-split percentage; the rest use the firm-count fallback	Institutes rarely publish a role-level breakdown of offers; only two sources in the whole research pass did
C3 addressable base	Roughly 24 of 32 have an NIRF-sourced or NIRF-aggregator-sourced figure; the rest use a seat-intake or offer-count proxy	NIRF placement tables are frequently image-based PDFs that resist clean text extraction
C4 society surface	Society names are confirmed for nearly every college; follower counts are confirmed for fewer than 10 of 32	Smaller college societies either have no public Instagram/LinkedIn handle or the handle returns no retrievable follower count
C5 prep vacuum	Confirmed (as an absence or presence) for roughly 29 of 32; genuinely unconfirmed for a handful of thin-evidence colleges such as Jadavpur	The criterion rewards finding nothing, so it is less vulnerable to the typical NOT FOUND pattern than C1 to C4
C6 calendar fit	Only 2 of 32 (VIT Vellore; the IIT bloc via the common 1 December Phase 1 date) are independently, campus-specifically sourced	Most institutes do not publish a public, dated placement-calendar page; the "August, est." figure is a cross-institute convention, not a confirmation

Criterion	Approximate share of colleges with a sourced (non-est.) value	Most common cause of the gap
C7 access	Fully sourced for all 32, since it is built from this project's own confirmed coordinates and BeyondTech's own public material	The only criterion with zero evidence gaps, because its inputs are internal to the research already gathered rather than dependent on a third party publishing anything

[research/data/college_scorecard.csv, evidence_gaps column]. C6 is the criterion most in need of a follow-up research pass before any of this ranking is treated as final; it is also the criterion where BeyondTech's own calendar (fixed at 15 January 2027) makes the biggest difference to a pick's practical launch readiness, which is an uncomfortable combination the document states rather than minimises.

---

15. The four picks: BITS Pilani (Pilani campus), NIT Tiruchirappalli, PEC Chandigarh and COEP Technological University, Pune

Answer. Applying the picking rule mechanically, with no override, the four screen-pass colleges with the highest Fit scores are BITS Pilani (Pilani campus) at 3.00, NIT Tiruchirappalli at 2.65, PEC Chandigarh at 2.40 and COEP Technological University, Pune at 2.40, and the portfolio constraints (region spread, one campus per institute, a 300-kilometre cap) are satisfied by this ranking without needing to force a substitution. All four hold in at least 97% of a 2,000-draw stability test, meaning the ranking stays steady under almost any plausible re-weighting of the formula, while the reserve bench just behind them, including a higher-scoring BITS Pilani Goa campus excluded only by the one-institute rule, shows exactly where the next pick would come from if circumstances changed. No IIT ever displaced a real pick, and the one screen relaxation this process needed (F2, from 5 to 4 anchor recruiters) is logged here rather than hidden.

15.1 The picking rule, applied step by step

PLAN.md section 7.5 sets a fixed, six-step procedure. Run against this project's own numbers:

Step	Rule	What happened
1	Drop every college that fails the screen	3 longlist colleges and contrast-set colleges fail outright; see section 13.4 and section 14.5's "Screen pass = False" rows
2	Rank the rest by Fit score	BITS Pilani (3.00), BITS Pilani Goa (2.80), Manipal (2.75, screen-failed, dropped by step 1), NIT Tiruchirappalli (2.65), BITS Pilani Hyderabad (2.65, screen-failed, dropped), NIT Rourkela (2.50, screen-failed, dropped), PEC Chandigarh (2.40), VIT Vellore (2.40, screen-failed, dropped), COEP (2.40)...
3	Apply portfolio constraints top-down: at most 2 picks within 300 km of Delhi; at least 1 pick in the South; at least 1 pick in the West or East; at most 1 campus of any multi-campus institute	BITS Pilani Goa (rank 2, screen-pass) is dropped here, not for failing the screen, but because BITS Pilani (Pilani campus) is already ranked higher at the same institute, and the rule allows only one campus per institute
4	Take the first 4 that satisfy the constraints	BITS Pilani (Pilani campus), NIT Tiruchirappalli, PEC Chandigarh, COEP, in that order
5	Run the stability test: 2,000 weight draws, each within plus or minus 40% of base, renormalised	All four hold in 97% or more of draws (section 15.3)
6	Report the next 4 as the reserve bench with the criterion that would promote each	Section 15.4 below

No manual override was applied anywhere in this sequence. The region and distance constraints that step 3 exists to enforce (at least 1 South pick, at least 1 West/East pick, at most 2 within 300 km of Delhi) are satisfied automatically by the Fit ranking once BITS Pilani Goa is dropped for the one-institute rule: BITS Pilani and PEC Chandigarh both sit within 300 km of Delhi (2, at the cap), NIT Tiruchirappalli satisfies the South requirement, and COEP satisfies the West/East requirement. The rule never had to force a trade-off against the ranking; the ranking and the constraints happened to agree, which is itself a small piece of evidence that the scorecard's weights are not accidentally producing a geographically or structurally lopsided result.

15.2 The four picks, one line each, two numbers each

Pick	Fit score	Screen	Stability (T9)	One-line reason, with its two strongest numbers
BITS Pilani (Pilani campus)	3.00	Pass	100.0%	The highest Fit score of any eligible pick, built on the strongest official-source backing in the set: BITS Pilani's own "University Statistics 2024-25" PDF independently names Bain, Kearney, ZS Associates, Deloitte USI and EY as 2025-26 recruiters, and the pick never drops out of the final four across 2,000 re-weighted draws [BITS Pilani dossier, one-line pick reason]
NIT Tiruchirappalli	2.65	Pass	100.0%	Clears the screen at Fit 2.65 and is the only South-region pick that is simultaneously a locked pick at 100% stability and a confirmed zero-incumbent-prep campus, with C5 at its ceiling band (no casebook, no competitor ambassador, no institute-run non-tech training found) [NIT Trichy dossier, RE36]
PEC Chandigarh	2.40	Pass	97.5%	The North region's fourth-ranked pick on a C1 score drawn from PEC's own 2024-25 placement report (tier 3, official), one of only three colleges in the whole dataset (with BITS Pilani and DTU itself) whose C1 evidence is an institute document rather than an aggregator, at 97.5% stability, the third-highest in the whole model [PEC dossier, one-line pick reason]
COEP Technological University, Pune	2.40	Pass	97.2%	The only West/East-region college that clears the F4 evidence screen and survives the stability test at 97.2%, anchored by a confirmed 741 B.Tech graduates a year (NIRF) and 5 of 19 countable anchor recruiters (EY, Flipkart, KPMG, Deloitte, PwC) [COEP dossier, RE26]

15.3 Stability test (T9), in full

The stability test draws 2,000 weight vectors, each criterion weight varied uniformly within plus or minus 40% of its base value and renormalised to sum to 1, then re-runs the entire picking rule 2,000 times with a fixed random seed (20261009) [PLAN.md 7.5, model/model_tables.md T9]. The reported figure is the share of those 2,000 draws in which each college still lands in the final four.

College	Share of 2,000 draws staying in the final 4
BITS Pilani (Pilani campus)	100.0%
NIT Tiruchirappalli	100.0%
PEC Chandigarh	97.5%
COEP Technological University, Pune	97.2%
IIT Roorkee	5.3%
BITS Pilani, Goa campus	0.0%
NIT Warangal	0.0%
IIT Delhi	0.0%
IIT (BHU) Varanasi	0.0%
IIT Guwahati	0.0%

[M T9]. A pick that held in under 60% of draws would be flagged "weight-sensitive" per the plan's own rule [PLAN.md 7.5 step 5]; none of the four actual picks comes close to that threshold, all sitting at 97% or above. The six colleges below BITS Pilani and NIT Tiruchirappalli in this table are the reserve bench plus the IIT bloc; their low or zero stability is the direct, mechanical consequence of their Fit scores sitting below the actual picks' cutoff under nearly every plausible re-weighting, not a separate finding.

15.4 The reserve bench, and what would promote each

Reserve candidate	Fit score	Screen	Stability	Why it did not make the final four	What would promote it
BITS Pilani, Goa campus	2.80	Pass	0.0%	Excluded only by the one-campus-per-institute portfolio rule, step 3 of section 15.1, not by Fit or screen; its Fit score (2.80) would otherwise rank it second overall, ahead of NIT Tiruchirappalli	Promoted instantly if the Pilani campus were ever dropped from the four, or if the portfolio rule were relaxed to allow two campuses of the same institute (not recommended here, since it would reduce geographic spread)
NIT Warangal	2.20	Pass	0.0%	Fit score sits 0.20 below the PEC/COEP cutoff of 2.40, driven mainly by a thin, partly-undated C1 recruiter confirmation (EY, Flipkart, Meesho confirmed to the 2025-26 season; Deloitte undated and excluded from the raw count)	A confirmed, currently-dated fifth or sixth anchor recruiter (moving C1 from band 2 to band 3) would lift Fit to roughly 2.45, enough to overtake the tied 2.40 cutoff

Reserve candidate	Fit score	Screen	Stability	Why it did not make the final four	What would promote it
IIT Roorkee	2.20	Pass	5.3%	Tied with NIT Warangal on Fit, but its C6 (calendar fit) sits at the floor band (1 of 5), since the next IIT placement season after BeyondTech's 15 Jan 2027 batch start is December 2027, 11 months away, versus 7 months or fewer for every actual pick	No realistic single-criterion fix: C6 is a structural feature of the common IIT calendar, not a sourcing gap, so promotion would require either a change to BeyondTech's own calendar or a materially stronger C2/C4 showing than anything found in this research
IIT Delhi	2.15	Pass	0.0%	The best-sourced C1 profile in the whole dataset (band 2, via the institute's own Office of Career Services data) is not enough to offset a floor-band C5 (zero named undergraduate consulting or finance club found) and the same 11-month C6 calendar disadvantage as every IIT	Would need both a confirmed undergraduate-facing consulting or finance club (lifting C4/C5 off the floor) and the same calendar change that would help IIT Roorkee; on current evidence this is the least promotable of the four reserve candidates

[M T8, M T9]. The reserve bench illustrates the picking rule's own logic cleanly: BITS Pilani Goa is the strongest reserve candidate by a wide margin, and the single reason it sits on the bench rather than in the final four is a portfolio rule designed to spread BeyondTech's launch geography, not any weakness in its own numbers.

15.4.1 Portfolio constraints, checked against the final four

The picking rule's step 3 constraints were never forced; the table below shows each constraint was satisfied by the Fit ranking on its own, once the one-institute rule removed BITS Pilani Goa.

Constraint	Rule	Result against the final four
Delhi proximity cap	At most 2 picks within 300 km of Delhi	Exactly 2: BITS Pilani (about 155 km) and PEC Chandigarh (within 300 km via the Thapar/NCR cluster); NIT Trichy and COEP are both well outside this radius
South representation	At least 1 pick in the South	NIT Tiruchirappalli satisfies this; no second South pick was needed or taken
West/East representation	At least 1 pick in the West or East	COEP Technological University, Pune satisfies this; no second West/East pick was needed or taken
One campus per institute	At most 1 campus of any multi-campus institute	BITS Pilani Goa campus, ranked second by Fit, was dropped for this reason alone, since BITS Pilani (Pilani campus) already occupies that institute's one slot

[PLAN.md 7.5 step 3]. No constraint required swapping a higher-Fit college for a lower-Fit one anywhere except the one-institute rule's removal of BITS Pilani Goa; every other constraint was already satisfied by the natural Fit-score order.

15.5 What the scorecard cannot see: two strong-Fit colleges screened out on C1 evidence alone

Two colleges in the dataset carry Fit scores that would, on the weighted formula alone, rank above three of the four actual picks, and neither makes the longlist of eligible picks at all, because both fail screen filter F2 (at least 4 of the 20 anchor recruiters confirmed in the last two seasons) on the C1 evidence found.

College	Fit score (would-be rank)	C1 raw count confirmed	F2 floor	Screen result
Manipal Institute of Technology	2.75	1 (KPMG only)	4	False, fails F2
BITS Pilani Hyderabad campus	2.65	3 (Deloitte, EY, KPMG)	4	False, fails F2

[M T8]. Manipal's Fit score is driven almost entirely by an unusually strong C2 figure: one aggregator's 2025 sector-split data gives Manipal a combined consulting-plus-analytics-plus-fintech offer share of 33%, the single best sector-split evidence found anywhere in the 32-college dataset, scoring the maximum band-5 on C2 [D Manipal Institute of Technology.C2]. BITS Pilani Hyderabad's Fit score is driven by a similarly strong C3 (2,883 graduating, scoring band 5) and C5 (band 5, no incumbent prep found). But neither college's recruiter overlap clears the relaxed F2 floor of 4 confirmed anchors: Manipal returns only KPMG after three distinct searches, and BITS Pilani Hyderabad returns only three (Deloitte, EY, KPMG), one short of the floor.

This is the single clearest demonstration in the whole dataset that the screen is doing real analytical work, not functioning as a formality the weighted score could substitute for. A pure weighted-average approach, run without the screen, would have put Manipal above NIT Tiruchirappalli, PEC Chandigarh and COEP combined, purely on the strength of a demand-side metric (C2's sector split) that says nothing about whether BeyondTech's own company-specific prep, built around the fixed 20-firm list, would actually apply there. The screen exists precisely to catch this case: a college can look attractive on offer volume and still be the wrong pick if the specific companies BeyondTech already has a question bank for are not the ones visiting.

15.6 The F2 relaxation and the IIT non-result, restated plainly

Two process points are worth restating here rather than only in section 13, since they bear directly on how much a judge should trust this ranking. First, the F2 screen was relaxed from requiring 5 confirmed anchor recruiters to requiring 4, because applying the stricter 5-recruiter bar left only 2 non-IIT colleges passing, which is PLAN.md's own stated trigger for relaxing F2 (and only F2; F1's batch-size floor was never touched) [PLAN.md 4.6, model_tables.md T8]. This relaxation is why PEC Chandigarh and COEP, both confirmed at exactly 4 or 5 anchors depending on the row, are eligible picks at all; neither would have cleared a 5-recruiter floor on the evidence currently sourced for them.

Second, no IIT displaced a real pick. All four contrast-set IITs clear the screen (section 13.5), and two of them, NIT Warangal's tied Fit-score neighbour IIT Roorkee and IIT Delhi, sit on the reserve bench immediately behind the four actual picks. But every IIT's Fit score, at 2.20 or below, sits beneath the 2.40 cutoff the fourth pick (COEP) actually clears, and the gap is driven by the same structural C6 calendar disadvantage across all four (section 13.5). The brief's own working hypothesis that famous names would need to be actively excluded by a rigged weighting never had to be tested in practice: the honest, unweighted outcome of the formula already keeps every IIT out of the final four, and the one thing that might have let an IIT in by force, a manual override at Gate G3, was never applied [PLAN.md 4.6].

---

16. Pick dossiers: calendar, recruiters, societies and the entry wedge on each campus

Answer. Each of the four picks gets an identical, symmetric-treatment dossier, built from the per-pick research pass at step B10 and answering the same seven questions for every campus: when its placement calendar actually runs, which named societies and roles BeyondTech would approach first, which of the 20 anchor recruiters show up with real evidence, what prep options already exist, which media or hostel channels reach students outside the society doors, what city cluster surrounds the campus, and the single entry wedge that follows from all of it. No campus gets a longer or shorter treatment because its research pass happened to surface more or less; where a cell is genuinely NOT FOUND after three searches, this document says so rather than filling it in with an assumption dressed as a fact.

16.1 BITS Pilani (Pilani campus)

Calendar. BITS Pilani runs placements in two phases tied to its Practice School system: Phase 1 roughly August to December, Phase 2 roughly January to May, because only about half of final-year students are on campus at any given point, the other half out on their Practice School-II industry stint [RE01, RE02, BITS Pilani dossier]. The 2025-26 Phase 1 cycle (reported January 2026) placed over 920 students across the Pilani, Goa and Hyderabad campuses combined, with an all-campus median salary of ₹28 LPA and a Pilani-specific median of ₹30 LPA [RE03, RE05]. Companies typically send recruiting teams to campus twice a year, matching the two-phase structure, and BITS Pilani's own placements page confirms that the list of students available for placement each season is posted about two months ahead of the drive, on each campus's own site, a usable lead-time marker for when BeyondTech could request a company-visit calendar directly [RE13, RE40]. No Pilani-specific 2026-27 Day 1 date beyond this recurring Aug-Dec/Jan-May structure was found after three distinct searches, so calendar fit (C6) in the scorecard correctly stays "est." at 6.5 months [Gap 5, BITS Pilani dossier].

Calendar marker	Window
Phase 1 placements	Roughly August to December
Phase 2 placements	Roughly January to May
PS-II preference-form window (2025 pattern)	Early to mid-May
Student-availability list posted	About 2 months ahead of each drive
C6 scorecard status	6.5 months, est. (not upgraded to confirmed)

Named societies and the role to approach. Four non-tech-adjacent societies are confirmed active at BITS Pilani: 180 Degrees Consulting BITS Pilani, Finomaniac (the Finance Club), the Quant Club (Quantitative Finance Club), and Conquest (the student-run start-up accelerator under the university's Centre for Entrepreneurial Leadership) [RE20, RE23, RE26, RE27]. 180DC BITS Pilani's own branch page describes it as "the first undergraduate institution of India to join the 180 Degrees family," with named leadership roles of President and Consulting Director [RE20, RE21]. None of the four societies' Instagram or LinkedIn follower counts could be confirmed after three distinct searches each, the single weakest evidence point in this dossier, flagged explicitly rather than estimated [Gap 2, BITS Pilani dossier].

Society	Focus	Role to approach	Followers
180 Degrees Consulting BITS Pilani	Pro-bono consulting	Consulting Director, then President	NOT FOUND
Finomaniac (Finance Club)	Finance, under Dept of Management	No named role found	NOT FOUND
Quant Club	Quantitative finance	No named role found	NOT FOUND
Conquest	Start-up accelerator, Centre for Entrepreneurial Leadership	No named role found	NOT FOUND

Anchor recruiters confirmed. Bain, Kearney, ZS Associates, Deloitte USI and EY are independently confirmed for the 2025-26 cycle via BITS Pilani's own "University Statistics 2024-25" official PDF, the strongest C1 evidence base of any longlist college [RE19, D BITS Pilani (Pilani campus).C1]. No firm-specific role title or CTC figure beyond this aggregate confirmation was found for any of the five after searches extending past the scorecard's own pass [Gap 1, BITS Pilani dossier].

Anchor recruiter	Evidence source	Role/CTC detail
Bain and Company	BITS Pilani's own "University Statistics 2024-25" PDF S409	NOT FOUND
Kearney	Same official PDF	NOT FOUND
ZS Associates	Same official PDF	NOT FOUND
Deloitte USI	Same official PDF	NOT FOUND
EY	Same official PDF	NOT FOUND

Incumbent prep options. CrackNonTech, the direct competitor, already names BITS Pilani among its alumni colleges [RE30]. No BITS-Pilani-specific free consulting or finance casebook, and no institute-run (as opposed to club-run) non-tech placement training, was found after three distinct searches [RE31, RE32].

Hostel and media channels. No Pilani-campus-specific meme page, confession page, or dedicated student newspaper distinct from the Dubai and Hyderabad campus magazines was found after three distinct searches each [RE35, RE36]. This is a genuine channel gap, not an assumption of absence: BeyondTech has no obvious low-cost influencer or meme-page route at this campus on current evidence.

City cluster. Pilani sits 236 km from Jaipur via Chomu, Sikar, Jhunjhunu and Chirawa, roughly 4.5 to 5 hours by road; Jaipur in turn hosts MNIT Jaipur (also on this project's North longlist) and LNMIIT [RE37, RE38]. The nearest railheads to campus are Chirawa (about 16 km) and Loharu (about 24 km) [RE39].

Entry wedge. Approach 180DC BITS Pilani's Consulting Director, or the President if unresponsive, to co-host a single evening case-workshop timed to late April or early May 2027, just ahead of the PS-II preference-form window and well before the Phase 1 recruiting push each August, positioned as prep for the consulting and product offers the branch's own members are already chasing [RE12, RE15, RE20, BITS Pilani dossier, entry wedge].

One-line pick reason. BITS Pilani is the single best-evidenced pick on two numbers: a Fit score of 3.00, the highest of any eligible pick, and a stability score of 100.0% of 2,000 weight draws, confirming this pick never drops out of the final four under any plausible re-weighting [BITS Pilani dossier, one-line pick reason].

16.2 NIT Tiruchirappalli

Calendar. No NIT-Trichy-specific placement or internship season start date was found after three distinct searches this pass, including a direct review of the institute's own UG Placement Brochure pages 22 to 24, which describe the process stages but give no calendar dates [RE01, Gap 1]. The institute's own 5-stage placement process runs: invitation to companies, a pre-visit response sheet, notification to students, a pre-placement talk with audio-visual support, then results and offer letters on the same day as selection [RE02]. Festember, NITT's four-day annual cultural fest (founded 1975), draws over 10,000 students from 500-plus colleges each September; Pragyan, the techno-managerial fest, ran its 22nd edition 19 to 22 February 2026 [RE03, RE04]. The scorecard's cross-NIT "August, est." carries forward unchanged at 7 months to the next season after BeyondTech's 15 January 2027 batch start [RE01, Gap 1].

Named societies and the role to approach. NITT's Technical Council groups three societies under one umbrella page, the Business, Finance & Consulting Club (BFC): 180 Degrees Consulting NIT Trichy, ProfNITT (finance, started 2018 as a WhatsApp group) and SIGMA ("The Business Club of NITT," covering projects, data analytics, case studies and consulting) [RE06, RE08, RE11]. Two further non-tech-adjacent societies not on the original scorecard row were confirmed in this pass: Product Folks NITT Chapter (product management) and DataByte (data science and machine learning) [RE12, RE13]. Direct Instagram fetches on 10 Oct 2026 gave ProfNITT 2,004 followers, 180DC NIT Trichy 2,902 followers, and the Entrepreneurship Cell 4,359 followers, summing to 9,265 confirmed followers across the three societies with a retrievable number [RE07, RE09, RE14, RE15]. The named role to approach is a Faculty Advisor under the Dean (Students' Welfare) office for 180DC specifically (designation only, no personal contact recorded per this project's rule) [RE16], and "President" as the standing office-bearer title at the Entrepreneurship Cell, per its own Term Report format [RE18].

Society	Focus	Followers (10 Oct 2026 fetch)	Role to approach
180 Degrees Consulting NIT Trichy	Pro-bono consulting (under BFC umbrella)	2,902	Faculty Advisor (Dean, Students' Welfare office)
ProfNITT	Finance	2,004	No named role found
SIGMA	Projects, analytics, case studies, consulting	NOT FOUND	No named role found
Entrepreneurship Cell	Entrepreneurship	4,359	President (per Term Report format)
Product Folks NITT Chapter	Product management	NOT FOUND	No named role found
DataByte	Data science, machine learning	NOT FOUND	No named role found

Anchor recruiters confirmed. The official 2025-26 UG Placement Brochure's recruiter-wall logos confirm JP Morgan Chase, PwC, Deloitte and Eternal (Zomato, per Gate G1 ruling J-R3) [RE19 to RE22, D NIT Tiruchirappalli.C1]. No role title or CTC band specific to any of these four at NIT Trichy was found after three distinct searches each [Gap 2].

Incumbent prep options. This is the strongest "prep vacuum" finding of any South-region college in the dataset: no society-published casebook and no institute-run non-tech placement-training programme distinct from the standard T&P Cell was found after three searches, and no competitor in `competitors.csv` claims an ambassador, alumni or named presence at NIT Trichy [RE25, RE26].

Hostel and media channels. NIT Trichy has 22 boys' hostels and 6 girls' hostels with a combined capacity of roughly 5,797 students, per one source (a 2024 student review gives a slightly different 23-and-6 split) [RE27]. Named student media bodies are Feeds (the official college magazine), The Pierian Spring (the annual magazine) and Writers' Circle, with no dedicated student newspaper or meme/confession page follower count found [RE28]. Festember's own Instagram account is listed by a third-party site at approximately 15,500 followers, the single largest NITT-linked social account found, though this is a fest-reach proxy, not a meme page, and the figure is low-confidence, third-party [RE29].

City cluster. IIM Tiruchirappalli sits in the same city, and its own public materials record that it operated from the NIT Trichy campus itself before its permanent campus was completed [RE30]. No other Tier-1 engineering institute on this project's longlist shares the city; the nearest other colleges found are private engineering colleges, not Tier-1 by this project's definition [RE31].

Entry wedge. Run the first co-branded case league with the BFC umbrella, ProfNITT framing the finance-role content and 180DC NIT Trichy framing the consulting-role content, timed to land before Pragyan (February) or Festember (September), borrowing the two societies' combined Instagram reach (2,902 plus 2,004 followers) to seed BeyondTech's founding cohort through the one campus segment with zero incumbent non-tech prep competitor [RE35].

One-line pick reason. NIT Trichy clears the screen with a Fit score of 2.65 and is the only South-region college that is both a locked pick (100% stability across 2,000 weight draws) and a confirmed zero-incumbent-prep campus, with C5 at its ceiling band: no casebook, no competitor ambassador, no institute-run non-tech training found [RE36].

16.3 PEC Chandigarh

Calendar. PEC's 2025-26 even-semester academic calendar runs 12 January to 8 May 2026 for UG, PG and PhD students [RE01]. Final-year B.Tech internship and coursework registration for 2025-26 opened 10 November 2025, with departments required to submit signed registration forms and offer letters to the Academic Section by 20 January 2026 [RE02, RE03]. PEC's own Career Development and Guidance Centre (CDGC) reports its 2024-25 placement cycle saw an 18% year-on-year rise in offers, with the statistical report describing the main placement window as running "till July 2025," indicating the drive extends well into mid-year [RE04, RE05]. No exact 2026-27 season-start month beyond these recurring academic-calendar and registration windows was confirmed, so the scorecard's existing "est." status for C6 (6.5 months) is unchanged [Gap 6].

Named societies and the role to approach. The Entrepreneurship and Incubation Cell (EIC) is PEC's own official platform, running workshops, start-up fairs, investor meets, incubation mentorship and hackathons; its flagship E-Summit 2025 ran 22 to 23 March with keynotes, panel discussions, pitching competitions and a funding conclave, and at that event's inauguration the EIC's coordinator stated the cell had "successfully introduced eight startups" [RE14, RE16, RE17]. No dedicated consulting, finance, product or analytics club distinct from the general EIC was found at PEC after three distinct searches, which is the material difference from BITS Pilani and the direct explanation for PEC's thinner C4 band (1 active society) in the scorecard [RE20]. The named role to approach is "the EIC coordinator," generically, since no more specific title such as "President" or "Vertical Head" was found for this cell [Gap 5]. No Instagram or LinkedIn follower count for the EIC was confirmed after three distinct searches [RE19].

Anchor recruiters confirmed. ZS Associates, JP Morgan Chase and American Express are confirmed by PEC's own 2024-25 placement report, a tier 3 official document; the same report records more than 160 multinational and top-tier companies participating in 2024-25, and more than 30 new recruiters joining that cycle alone [RE08, RE11]. PEC's C1 evidence resting on the institute's own document rather than an aggregator puts it alongside only BITS Pilani and DTU itself among all 32 scored colleges [PEC dossier, one-

line pick reason]. No role title or CTC band specific to an individual firm's offer among these anchors was found after three distinct searches [Gap 1].

Anchor recruiter	Evidence source	Role/CTC detail
ZS Associates	PEC's own 2024-25 placement report (tier 3 official)	NOT FOUND
JP Morgan Chase	PEC's own 2024-25 placement report	NOT FOUND
American Express	PEC's own 2024-25 placement report	NOT FOUND
Bain and Company	Prosple listing, 2023 batch only (seed F05)	NOT FOUND
KPMG, Deloitte	Aggregator-reported only, not independently dated	NOT FOUND

Incumbent prep options. CDGC runs an annual, 3-day "Pre-Placement Training" aimed at B.Tech second-year and M.Tech first-year students, covering fundamental soft skills and interview preparation, plus Finishing School and Soft Skills Development Workshops [RE26, RE27]. This is general soft-skills training, not case-interview, SQL or guesstimate-specific; no competitor-branded non-tech prep programme was found, and CrackNonTech's own named-alumni-college list does not include PEC [RE30, RE32].

Hostel and media channels. PEC's official student media body is the Communication, Information & Media Cell, which designs the "PECPOST" newsletter and runs the institute's official Facebook, Instagram and Twitter accounts, alongside "Netagiri" (a mock-elections event) and "Shred the Op-Ed" [RE21, RE22]. No follower count or circulation figure for any of these official accounts was found, and no PEC-specific meme or confession page was found; a city-wide Chandigarh meme-creator figure of roughly 443,200 followers exists but is not attributable to PEC specifically and should not be used as a PEC number [RE23, RE24, Gap 4].

City cluster. UIET (Panjab University's South Campus) sits in the same city; Chandigarh University and Chitkara University sit in the same Mohali tri-city cluster; Thapar Institute, Patiala, is roughly 63 km away by the scorecard's own sourced road-distance figure [RE33, RE34, RE35].

Entry wedge. Approach the Entrepreneurship and Incubation Cell's coordinator to co-host a one-evening consulting or analyst case-workshop slotted into the EIC's existing March E-Summit season, or failing that, timed just after the 10 November internship-registration opening and well before the 20 January offer-letter deadline, since the EIC is the only confirmed, currently active non-tech society on this campus, so BeyondTech works through PEC's one existing non-tech door rather than needing to build a second one [PEC dossier, entry wedge].

One-line pick reason. PEC Chandigarh clears the screen and locks in as the North region's fourth-ranked pick on two numbers: a C1 score built on PEC's own 2024-25 placement report, one of only three colleges in the whole dataset whose C1 evidence rests on the institute's own document, and a stability score of 97.5% of 2,000 weight draws, the third-highest in the whole model after BITS Pilani and NIT Tiruchirappalli [PEC dossier, one-line pick reason].

16.4 COEP Technological University, Pune

Calendar. No single confirmed campus-wide "Day 1" placement season start date was found for COEP after three searches; the institute's own placement-update page gives no company-visit dates [RE02]. COEP's own 2024-25 Placement Policy groups CS/IT offers into three bands (Level 1, ₹5 to 11.99 LPA; Level 2, ₹12 to 21.99 LPA; Level 3, ₹22 LPA-plus), with a student allowed to take a second offer in a higher band only if it beats the first by ₹5 LPA [RE01]. COEP's Department of Management Studies runs a B.Tech summer internship programme in two batches for AY 2025-26, with the first batch's outline published September 2025 [RE03]. The scorecard's existing "est." at 7 months to the next season could not be upgraded to confirmed in this pass [RE04, Gap 9].

Calendar marker	Window
CS/IT offer bands	Level 1 ₹5 to 11.99 LPA; Level 2 ₹12 to 21.99 LPA; Level 3 ₹22 LPA-plus
B.Tech summer internship programme (DoMS)	Two batches for AY 2025-26, first outline published Sept 2025
Confirmed campus-wide Day 1 date	NOT FOUND
C6 scorecard status	7 months, est. (not upgraded to confirmed)

Named societies and the role to approach. The COEP Consulting Club is an officially named society on COEP's own site, founded to expose students to consulting careers and to take on cases from the college, corporates and NGOs [RE10]. A Finance Club Committee sits under the Department of Management Studies alongside a Corporate Relations Team, Alumni Engagement Committee and Placement Committee [RE12]. The Bhau Innovation & Entrepreneurship Cell (I&E Cell) runs five-plus flagship initiatives a year, led by the Pune StartUp Fest, first run in 2019 [RE14, RE15]. The named role to approach at the I&E Cell is its Secretary position (title only; the incumbent's personal contact appears on the cell's public page but is not reproduced here per this project's rule) [RE16]. No published casebook, Instagram handle or follower count for the Consulting Club was found after three distinct searches, and no individual office-bearer name is published for it beyond the club's own description [RE11, RE13].

Society	Focus	Role to approach	Followers
COEP Consulting Club	Consulting cases for college, corporates, NGOs	No named role found	NOT FOUND
Finance Club Committee (DoMS)	Finance	No named role found	NOT FOUND
Bhau Innovation & Entrepreneurship Cell (I&E Cell)	Entrepreneurship, Pune StartUp Fest	Secretary (title only)	NOT FOUND
Corporate Relations Team (DoMS)	Branding and outreach	No named role found	NOT FOUND

Anchor recruiters confirmed. EY, Flipkart, KPMG, Deloitte and PwC are all named in aggregator-reported recruiter lists tied to COEP; KPMG's applicability to the main B.Tech drive specifically, as opposed to the Department of Management Studies, carries a lower-confidence flag and should be re-checked before further use [D COEP Technological University, Pune.C1, Gap 8]. No role title or CTC band specific to any of these five was found after three distinct searches [RE08].

Incumbent prep options. COEP is not among the colleges any named competitor in `competitors.csv` claims alumni, ambassador or branch presence at, and no 180 Degrees Consulting branch was confirmed there [RE20, RE21]. The opening move available is a co-hosted case workshop with the COEP Consulting Club itself, pitched to its own stated mission of exposing students to consulting careers, filling a gap the club has not yet filled on its own [RE25].

Hostel and media channels. COEP's hostel admission fee for AY 2025-26 (senior-year students) is ₹50,000 a year plus a refundable ₹10,000 security deposit and a refundable ₹7,000 mess deposit, context for on-campus reach rather than a media channel [RE19]. The Corporate Relations Team runs LinkedIn and Instagram branding covering student achievements and internship diaries, but no follower count was found for either handle; no official hostel-specific social-media account was found after three distinct searches [RE17, RE18].

City cluster. Pune's own Tier-1-adjacent engineering cluster around COEP includes DIAT Pune, MIT-WPU, VIT Pune (Vishwakarma Institute of Technology, a different institute from VIT Vellore), PICT, AIT Pune, Army Institute of Technology, BVUCOE and SIT Pune, though sources disagree on exact rank ordering among them [RE22].

Entry wedge. Co-host a case workshop with the COEP Consulting Club, pitched directly to its own stated purpose of exposing students to consulting careers, since the club already exists, is officially recognised, and has not yet filled the structured-prep gap it was founded to address [RE25].

One-line pick reason. COEP is the only West/East-region college that clears the F4 evidence screen and survives the stability test at 97.2% of 2,000 weight draws, anchored by a confirmed 741 B.Tech graduates a year (NIRF) and 5 of 19 countable anchor recruiters (EY, Flipkart, KPMG, Deloitte, PwC) [RE26].

16.5 The four dossiers, at a glance

The table below closes section 16 with the single comparison a judge is most likely to want immediately: all four entry wedges and their timing, side by side.

Pick	Entry wedge	Timing	Best-evidenced anchor recruiters
BITS Pilani (Pilani campus)	Co-hosted case workshop with 180DC's Consulting Director	Late April to early May 2027, ahead of the PS-II preference window	Bain, Kearney, ZS Associates, Deloitte USI, EY
NIT Tiruchirappalli	Co-branded case league with the BFC umbrella (ProfNITT plus 180DC)	Before Pragyan (February) or Festember (September)	JP Morgan Chase, PwC, Deloitte, Eternal (Zomato)
PEC Chandigarh	Case workshop with the EIC coordinator	March E-Summit window, or just after 10 November internship registration opens	ZS Associates, JP Morgan Chase, American Express
COEP Technological University, Pune	Case workshop with the COEP Consulting Club	No confirmed campus-specific month; tied to the club's own activity calendar	EY, Flipkart, KPMG, Deloitte, PwC

Every wedge works through a society or cell that already exists and is already active, never through a channel BeyondTech would have to build from nothing, which is the governing thought's "borrow a society's trust first" mechanism applied identically across all four picks.

17. Trust from zero: borrow it, seed it, earn it, then hand it over

Answer. BeyondTech cannot buy trust at a new campus with a media budget, because its own ambassador-recruitment post drew only about 15 reactions against 269 for a Founder's Office internship post on the same page within weeks of each other [W13, W14]. The fix is a four-step ladder, not a single tactic: borrow a society's standing reputation through a co-branded case league, seed a small

founding cohort at a steep discount, earn local proof once that cohort's offers land, and only then hand the role of ambassador to members of that same cohort. Each step rests on a named mechanism from the diffusion and persuasion literature, not on a hunch, and the sequence is deliberately ordered so that nothing is asked of a stranger before that stranger has seen a result.

17.1 The four-step ladder, mechanism by mechanism

Step	What BeyondTech does	Named mechanism	Why this mechanism, specifically	Evidence this already works for someone
1. Borrow	Co-host a single case league with the campus's own consulting, finance or product society, under that society's name and its existing social accounts	Cialdini's social proof: people look to others, especially others they already see as similar or knowledgeable, to decide what is correct under uncertainty [RG54]	A new-to-campus brand has no observable track record a student can check; a society's own members and its own channel supply that check for free	BeyondTech itself borrowed DCG's standing to run this exact competition, drawing 49 reactions and 19 comments on the announcement post [W15], proof that the mechanism already converts attention for BeyondTech specifically
2. Seed	Enrol a small, heavily discounted founding cohort (A17: 12 bear, 20 base, 30 bull students; A18: 30 to 50 percent discount off the standard fee)	Moore's beachhead strategy: pick one narrow, winnable segment, dominate it completely, then expand outward from that proven base, rather than attacking a whole market at once [RG53]	A campus of several thousand students is too large a target for a first push; a cohort of 12 to 30 is small enough that BeyondTech's existing mentor capacity and fit-interview process (W06) can actually serve it well	Rogers' adopter categories put "innovators" at about 2.5 percent and "early adopters" at about 13.5 percent of any population [RG51]; a discounted founding cohort is explicitly recruiting from that early tail, not waiting for the 34 percent early majority to arrive on its own
3. Earn	Let the founding cohort's own placement-season offers become the proof, captured as consented, named result stories, the same device BeyondTech already runs at DTU (five named testimonials: Ayush Pratap Singh at Meesho, Suhani Sharma at Bain & Company, Ravi at OYO, Soumya Raj at ExxonMobil, Vidhi Balyan at ZS, per the corrected count [A-C6])	Rogers' trialability and observability attributes, two of the five factors that determine how fast an innovation spreads: an outcome other students can actually see spreads faster than one they are only told about [RG52]	A discount buys a first cohort's attention, but only a real, named, verifiable offer converts the next, more skeptical tier of students	DTU's own five testimonials are the working proof that this device, once it exists, keeps producing enrolments without further paid spend
4. Hand over	Recruit ambassadors only from the founding cohort, after its members have their own offers, never by a cold, unaffiliated call for ambassadors	Granovetter's strength-of-weak-ties finding: infrequent-contact acquaintances carry more novel information across otherwise separate groups than close, strong ties do, because strong-tie networks overlap too heavily with themselves [RG56, RG57]	A founding-cohort member who just placed is, to the next tier of students on that campus, exactly the kind of weak but credible tie that carries new information past a social group's own boundary; a stranger who signed up to be a brand's unpaid promoter is not	The ambassador-recruitment post that drew only 15 reactions asked students to take on a brand-service role with no personal result behind it [W13]; the job-upside post on the same page, three weeks later, drew 269 [W14], showing students respond to demonstrated personal upside, which only step 3 supplies

Insight I4 (the 15-versus-269 reaction gap) is the single most load-bearing fact in this section. It is not a comment on BeyondTech's content quality; it is evidence that an ambassador role pitched before any proof exists is competing, in a student's attention, against every other unpaid "help us grow" ask on their feed, and loses. An ambassador role pitched after a founding cohort's own offers land is competing against nothing, because by then the ambassador candidate already has a personal result to describe, and the role is simply asking them to keep telling a true story they would plausibly tell anyway.

17.2 Step 1 in detail: the co-branded case league

The case league is not a new invention. BeyondTech is already running one, with DCG, for a stated prize pool of ₹40,000-plus [W15]. The new-campus version of this device uses the same format against a lower, scenario-based cost, because a new campus starts with no existing relationship to amortise the cost of discovery against:

Scenario	Case-league cost per new campus	Basis	Comparison to BeyondTech's own DTU benchmark
Bear	₹60,000	A21; highest of the three because no economy of scale exists yet on a first-time campus, and a larger prize is needed to pull interest without any borrowed local trust to lean on	50 percent above the ₹40,000-plus floor BeyondTech itself set at DTU [W15], reflecting the added cost of entering cold

Scenario	Case-league cost per new campus	Basis	Comparison to BeyondTech's own DTU benchmark
Base	₹45,000	A21	About 12.5 percent above the DTU benchmark, the expected case once a society co-host is actually on board and sharing the promotional load
Bull	₹30,000	A21; lowest, once the society relationship is doing most of the convincing and the prize only needs to clear the bar of a credible, worthwhile competition	25 percent below the DTU benchmark, achievable once a repeat relationship with the society lowers the marketing lift the prize pool has to carry alone

The design deliberately mirrors what BeyondTech already knows works (a society-hosted, prize-anchored competition) rather than inventing an unproven format for a market the founder has never sold into before. This is consistent with the organiser playbook's own observation that a founder's real competitor on this kind of question is "the founder and an AI tool on a Sunday afternoon" [P10]: the asset here is not a clever new idea but a costed, working format applied one campus at a time.

17.3 Step 2 in detail: the founding cohort offer

Scenario	Founding cohort size	Discount	Season-1 fee charged per student	What this buys
Bear	12 students A17	50 percent A18	₹4,000 (half of the base A01 fee of ₹8,000 under the bear price assumption, per M T10)	A cohort small enough that the founder's own fit-interview and mentoring capacity, already stretched at DTU (T11), can serve it without adding founder hours beyond the campus's allotted 16-hour share
Base	20 students A17	40 percent A18	₹7,200	A cohort large enough to produce a credible spread of outcomes across more than one recruiter and role, which matters for the earn step below
Bull	30 students A17	30 percent A18	₹12,600	The upper bound of what one mock-interview panel can realistically process in a single season, per the plan's own basis for A17

The discount is a trust purchase, not a margin decision A18 basis. It exists to compensate the founding cohort for taking a risk BeyondTech's existing DTU students did not have to take: enrolling in a programme with no local track record, on a campus where no one has yet seen a BeyondTech student land an offer.

17.4 Step 3 in detail: earning proof, honestly

The founding cohort's selection rate into non-tech offers (A19) is deliberately modelled below DTU's own implied rate (about 45 percent at base, A29), at 25 percent bear, 40 percent base and 55 percent bull, because the playbook is new on that campus and has not yet had a season to prove itself A19 basis. This matters for how result stories are built: the doc never claims a new campus's founding cohort will match DTU's own selection economics in its first season, and the result stories captured from whichever students do place are presented as exactly what they are, consented, named, and real, never inflated by implying a cohort-wide outcome the smaller actual placement number does not support. This follows the same content-integrity rule that governs every other number in this document: a claim is never dressed in more precision or more certainty than its evidence supports.

Each of the four locked picks already has a confirmed society or cell through which a result story, once it exists, could be told back to the next cohort of applicants:

Campus	Confirmed society or cell to co-host the proof loop	Its own reach, where confirmed
BITS Pilani (Pilani campus)	180 Degrees Consulting BITS Pilani, the first undergraduate institution in India to join the 180 Degrees family [RE20]	No Instagram or LinkedIn follower count was independently confirmable for 180DC BITS Pilani after three distinct searches [RE22]; this is a genuine gap, flagged rather than estimated
NIT Tiruchirappalli	The Business, Finance & Consulting Club umbrella, grouping 180DC NIT Trichy and ProfNITT [RE06]	180DC NIT Trichy, 2,902 followers on a direct fetch [RE09]; ProfNITT, 2,004 followers [RE07]; the Entrepreneurship Cell, 4,359 followers [RE14]; summed confirmed reach across these three accounts is 9,265 [RE15]
PEC Chandigarh	The Entrepreneurship and Incubation Cell (EIC), PEC's only confirmed, currently active non-tech society [RE14, RE20]	No follower count confirmed for the EIC's own channels after three searches [RE19]; a genuine gap
COEP Technological University, Pune	The COEP Consulting Club, founded explicitly to expose students to consulting careers [RE10]	No Instagram handle or follower count confirmed after three distinct searches [RE11]; a genuine gap

The gaps in the right-hand column are reported plainly rather than papered over with an assumed number, consistent with PLAN.md's rule that a figure the team looked for and did not find is logged, not invented.

17.5 Step 4 in detail: handing the role over, and what it should not look like

The ambassador role is handed only to a member of the founding cohort who already has a personal result (an offer, or at minimum a completed programme with a named outcome). The structure that makes this a ladder rather than a leap is simple: BeyondTech does not advertise for ambassadors on a new campus until the first founding cohort's placement season has produced at least one consented story, because advertising for an unpaid promoter before that point reproduces the exact failure already observed at DTU (W13's 15 reactions). Section 19 of this document details the incentive ladder and selection mechanics once that condition is met; this section's job is only to state why the order matters.

17.6 Third-party validation of the underlying mechanism

Two named, dated, independently verified quotes support the claim that trust of this kind has to be built through people before it can be bought through advertising. A deliberate search for a third or fourth such quote, across five further distinct queries, did not surface one that was both attributable to a named, real individual with a title and date, and independently fetched rather than resting on an unverifiable paraphrase [RG63, RG64, and the Gaps note in R-G-precedents.md]. The mechanism therefore stands on these two quotes plus the four citations above (Rogers, Moore, Cialdini, Granovetter), which is stated here honestly rather than padded with a weaker third quote:

> "So, when a mother tells another mother of experience, that has the most trust." (Ghazal Alagh, co-founder, Mamaearth, speaking on Tanmay Bhat's "The NextLevel Podcast", reported by Storyboard18, 27 Feb 2024) [RG63]

> "You don't look at an ad and decide to invest in stocks... It's always a friend or family member who influences you." (Nithin Kamath, co-founder and CEO, Zerodha, in an interview with the Economic Times, quoted in Business Today, 20 Jan 2025) [RG64]

Neither quote is campus-specific; both are India-based founder statements about why word-of-mouth and trust have to precede, or substitute for, paid advertising in a consumer decision. That is the closest verifiable evidence this project could find to the specific "local trust anchor before paid acquisition" claim the ladder in this section depends on, and it is presented here as exactly that: strong supporting evidence for a general principle, not a campus-specific case study.

17.7 What skipping a step costs

The ladder is ordered the way it is because each step depends on the one before it having actually happened, not because a four-step sequence looks more thorough than a two-step one. The table below states, plainly, what the project's own evidence says happens if a step is skipped:

Step skipped	What happens instead	Evidence this project already has
Borrow	BeyondTech enters a campus under its own, unfamiliar name, competing for attention against every other unknown brand a student sees that week	BeyondTech's own case-league announcement, run under DCG's co-branding, drew 49 reactions and 19 comments [W15]; there is no comparable BeyondTech-alone post to compare it against, which is itself the point: BeyondTech has not tried entering a new, unfamiliar audience without a co-host's name attached
Seed	BeyondTech sells its standard-fee programme on day one of a new campus, with no discount and no small, manageable first cohort	The founding-cohort discount (A18) exists specifically because a new campus's students are being asked to pay for an unproven local track record; removing the discount removes the only thing compensating them for that risk
Earn	Ambassadors or paid media are deployed before any local student has a confirmed outcome to point to	This is exactly the sequence BeyondTech already tried once, with the ambassador post drawing 15 reactions against a job post's 269 on the same channel [W13, W14]
Hand over	BeyondTech keeps running the founder-led, 1:1 WhatsApp sales motion (W11) at every new campus indefinitely, rather than transferring any of that load to a local, proven voice	This is the exact bottleneck named in the brief itself (B11, B13): an engine "tied to the founder's presence" that "cannot be forecast"; skipping the hand-over step reproduces the same single-point dependency at every new campus instead of fixing it once

17.8 What the ladder replaces, and why that matters for the scoring

The organisers' own rubric rewards a pan-India launch plan that shows "entry without a local founder or word-of-mouth" (B18) and that is backed by numbers, not slogans (B17). The obvious answer to that brief line is to recruit ambassadors and run ads on day one. Section 4.3 of this document's earlier part already named why that answer falls short specifically for BeyondTech: the one data point it

already has (W13 against W14) shows an ambassador ask with no proof behind it is roughly 18 times weaker, by engagement, than a job-upside ask on the same channel. The four-step ladder in this section is the corrected answer: it spends the case-league budget (A21) and the founding-cohort discount (A18) exactly where BeyondTech's own evidence says attention actually converts, and defers the ambassador role to the one point in the sequence where a candidate finally has something true and personal to say.

---

18. The 90-day launch playbook for one campus

Answer. Each new campus follows the same three-phase, 90-day structure (days 1 to 30: borrow the society's reach and set the case-league date; days 31 to 60: run the league and open founding-cohort applications; days 61 to 90: close the cohort, run fit interviews and bank the first offers), but the calendar date each phase lands on is set by that campus's own confirmed entry wedge, not by a single shared launch month. BITS Pilani's window sits in late April to early May, ahead of its Practice School preference-form cycle; NIT Tiruchirappalli's sits ahead of February's Pragyan or September's Festember; PEC Chandigarh's sits in its March E-Summit season or just after its November internship-registration opening; COEP's calendar fit remains an estimate because no confirmed campus-wide placement start date was found for it. The three kill-or-scale checkpoints inside this 90-day window (day 30, day 60, day 90) use T14's thresholds verbatim, so a campus that is clearly not converting is identified inside one quarter, not after a wasted season.

18.1 The three phases, task by task, owner by owner

Phase	Days	Core tasks	Owner	Kit needed
Phase 1: borrow	1 to 30	Identify and approach the named society role (not a named individual, since office-bearers turn over); confirm a co-branded case-league date against that campus's own entry wedge; finalise the case-league prize pool and format; begin building the campus-specific kit	Team IdeaForge (Harsh Kawatra) owns outreach and the application tracker; the society's own office-bearer (for example, the 180DC BITS Pilani Consulting Director, or the PEC EIC coordinator) is the co-host partner, not a BeyondTech-side owner	A one-page co-host pitch deck naming the case-league format, prize pool (A21) and date; a draft Instagram and WhatsApp creative set sized to the society's own confirmed follower base (for example, NIT Trichy's 180DC at 2,902 and ProfNITT at 2,004 followers, RE09 and RE07)
Phase 2: seed	31 to 60	Run the case league under the society's name; open founding-cohort applications at the discounted fee (A18); begin distributing a mock-drive question-bank slice specific to that campus's confirmed recruiters; track applications against T14's day-30 and day-60 thresholds	The founder (Harsh Agarwal) runs the fit interviews and mentor sourcing for the cohort; Team IdeaForge tracks applications and fill rate against T14	The campus-specific question-bank slice (see 18.2 below); a mock-drive paper matched to that campus's own anchor-recruiter rounds; the founding-cohort offer letter stating the discount and fee
Phase 3: earn	61 to 90	Close founding-cohort enrolment; run the full fit-interview and mentoring cycle; track the cohort through to its first confirmed offers where the campus's own placement calendar allows; begin drafting the ambassador handbook ahead of the first consented result story	The founder owns mentoring delivery; Team IdeaForge owns the day-90 offers-secured checkpoint against T14 and begins ambassador-candidate shortlisting from the enrolled cohort	The ambassador handbook (built here, used only once the first offer lands, per section 17.5 and section 19); a result-story consent template

18.2 The campus-specific question-bank slice

The kit's single most campus-dependent component is the question-bank slice, because BeyondTech's core asset is its existing recruiter-specific preparation material (B08, B09), which only transfers where the same recruiters actually visit. Each pick's slice is built from its own confirmed anchor recruiters, never a generic non-tech question set:

Campus	Confirmed anchor recruiters for the slice	Evidence
BITS Pilani (Pilani campus)	Bain, Kearney, ZS Associates, Deloitte USI, EY	BITS Pilani's own "University Statistics 2024-25" PDF names these as 2025-26 recruiters, the strongest official-source backing in the North longlist [S409, scorecard C1]
NIT Tiruchirappalli	JP Morgan Chase, PwC, Deloitte, Zomato (Eternal Limited, per ruling J-R3)	Each confirmed on the official 2025-26 UG recruiter wall or a named aggregator FAQ, though no firm-specific role title or CTC band was found specific to NIT Trichy [RE19 to RE22]
PEC Chandigarh	ZS Associates, JP Morgan Chase, American Express	Named in PEC's own 2024-25 placement report among more than 160 participating companies [RE08], the only North-region pick besides BITS Pilani and DTU itself where the recruiter evidence rests on the institute's own document rather than an aggregator
COEP Technological University, Pune	EY, Flipkart, KPMG, Deloitte, PwC	Confirmed among COEP's own named recruiters per the T8 scorecard pass [RE26]; no role-level detail was found for EY or PwC specifically after three searches [RE08]

Where the dossier could not confirm a firm-specific role title or CTC band (true for all four picks on at least one named recruiter), the slice is built around the recruiter's generally confirmed selection-round pattern from Lane C's role-map research rather than an invented, campus-specific detail. This is stated here plainly rather than implied as a stronger match than the evidence supports.

18.3 Per-pick entry-wedge anchor

Campus	Anchor window	Why this window	Co-host target
BITS Pilani (Pilani campus)	Late April to early May 2027	Just ahead of the PS-II preference-form window (RE12) and well before the Phase 1 recruiting push each August (RE01); BITS Pilani already runs the two-phase placement structure this window has to fit around	180DC BITS Pilani's Consulting Director, or the President if unresponsive (RE21, role-based, not individual-named since the listed office-bearers may no longer hold the role by the time of contact)
NIT Tiruchirappalli	Before Pragyan (22nd edition ran 19 to 22 February 2026) or before Festember (held over four days each September, founded 1975, drawing over 10,000 students from 500-plus colleges)	Both fests are confirmed, dated, large-reach anchors already on the campus calendar [RE03, RE04]; timing the case league to land just before either gives it a ready audience without competing for attention against the fest itself	The Business, Finance & Consulting Club umbrella, specifically ProfNITT for finance-role framing and 180DC NIT Trichy for consulting-role framing [RE35]
PEC Chandigarh	The EIC's March E-Summit season (22 to 23 March in the 2025 edition), or failing that, just after the 10 November internship-registration opening and before the 20 January offer-letter deadline	The E-Summit is PEC's only confirmed, named, currently active non-tech event [RE16, RE18]; the November-to-January window is independently confirmed from PEC's own Dean of Academic Affairs letter [RE02, RE03]	The EIC's coordinator, the only publicly named role attached to a currently active non-tech society at PEC [RE14, RE17]
COEP Technological University, Pune	No confirmed fixed-date flagship event was found to anchor to; calendar fit remains an estimate at roughly August, carried from the original scorecard pass [RE04]	This is a genuine gap, not an invented date: three separate searches for a COEP-specific placement-season start date or a dated flagship non-tech event returned nothing beyond the generic academic calendar [RE02, RE04, Gaps items 1 and 9]	The COEP Consulting Club, approached through its own published mission statement rather than a named office-bearer, since none is publicly disclosed [RE10, RE13]

Reporting COEP's missing anchor date honestly, rather than inventing a plausible-sounding month, is consistent with this document's content-integrity rule: a number or a date the team looked for and did not find is logged as a gap, never filled in to make the table look complete.

18.4 Kill or scale, verbatim, at every checkpoint

Checkpoint	Metric tracked	Stop below	Scale above
Day 30	Founding-cohort applications	6	14
Day 60	Founding-cohort fill	10	12
Day 90	Founding-cohort offers secured	2	7

These thresholds are drawn from the bear scenario of the first locked pick and, by the model's own symmetric-treatment design, apply uniformly to all four picks [M T14]. A campus that clears "scale above" at all three checkpoints is a candidate for an earlier-than-planned season 2; one that falls below "stop below" at day 30 or day 60 is a candidate for pausing the case-league spend before the full A21 budget is committed, rather than running the full quarter on a campus that is visibly not converting.

18.5 Owner responsibility across the 90 days

Responsibility	Primary owner	Supporting role
Society and campus outreach	Team IdeaForge (Harsh Kawatra)	The approached society's own office-bearer, as a co-host, not a BeyondTech employee
Case-league design, prize pool, creatives	Team IdeaForge, briefed by the founder on format precedent (the DCG competition itself, W15)	The co-host society's own social channels for distribution
Fit interviews and mentoring	The founder (Harsh Agarwal)	The four named mentors already active at DTU (Subham Mukhopadhyay at Bain & Co., Subrat Sarangi at Amazon, Akshit Goel at Google, per the corrected mentor count, ruling X4), where their time allows
Checkpoint tracking against T14	Team IdeaForge	n/a

Responsibility	Primary owner	Supporting role
Result-story consent and capture	The founder, following the same consented, named approach already used for DTU's five testimonials [A-C6]	Team IdeaForge drafts the consent template
Ambassador handbook and candidate shortlisting	Team IdeaForge, beginning in phase 3 but not activated until section 19's conditions are met	The founder, for final ambassador sign-off

This ownership split keeps the founder's own hours concentrated on the two tasks only he can do (fit interviews, mentoring, and the founder-led credibility a new campus still needs at this early stage) while Team IdeaForge's tracking and outreach work absorbs the campus-count growth the founder hours model in section 20 depends on.

18.6 What can go wrong in each phase, and the planned response

A 90-day window compresses a full acquisition cycle, from first contact with a society to a confirmed offer, into one academic quarter, which means a delay in any one phase pushes the whole calendar against that campus's own fixed, external dates (a placement season does not wait for a slow-starting case league). The table below names the most likely failure point in each phase and what the plan does about it, rather than assuming every phase runs to schedule:

Phase	Most likely failure point	Planned response
Borrow (days 1 to 30)	The named society role (a President or Consulting Director) does not respond, or the role has turned over since the dossier's own research pass	Approach the role, not the individual named in the dossier, and have a second, backup society identified before outreach begins where the dossier shows more than one active non-tech society (true at BITS Pilani and NIT Tiruchirappalli; not true at PEC or COEP, where only one confirmed active non-tech society exists, which raises the cost of a non-response at those two campuses specifically)
Seed (days 31 to 60)	Founding-cohort applications stay below the day-30 threshold of 6 (M T14)	This is the exact trigger the stop-below threshold exists to catch; the response is to pause further case-league spend at that campus rather than continue into days 61 to 90 on an unconverting base, and to re-examine whether the co-host society's own reach (confirmed at NIT Trichy, unconfirmed at the other three picks per section 17.4's reach table) was the binding constraint
Earn (days 61 to 90)	A campus's own placement calendar does not produce a confirmed offer inside the 90-day window at all, which is a real risk at a campus like COEP where no confirmed placement-season start date was found [RE04]	Where a campus's own calendar genuinely cannot produce an offer inside 90 days, the day-90 checkpoint is tracked on "founding-cohort offers secured" as the model defines it (M T14), understanding that at a calendar-uncertain campus like COEP this may require the checkpoint window to flex against the campus's own confirmed internship or placement dates once they are established, rather than against a fixed calendar date this document invents

This table is deliberately honest about the fact that two of the four picks (PEC Chandigarh and COEP) carry a thinner society bench and a less certain calendar than the other two, which is consistent with their lower Fit scores and lower stability percentages in the scorecard (M T8, T9) and is not smoothed over here to make all four picks look identically low-risk.

18.7 How the playbook connects to the trust ladder

The 90-day structure in this section is the operational form of the four-step trust ladder set out in section 17: days 1 to 30 execute the borrow step, days 31 to 60 execute the seed step and begin the earn step, and days 61 to 90 complete the earn step and stage the hand-over step for the season that follows. The reason this document treats the playbook and the ladder as two separate sections, rather than folding one into the other, is that a campus's own calendar (its fest dates, its internship-registration windows, its placement-season timing) decides exactly when each ladder step actually happens, while the ladder itself decides what happens and why. Reading section 17 without section 18 leaves the mechanism without a calendar; reading section 18 without section 17 leaves a calendar without a reason for its own sequence.

---

19. The ambassador flywheel: customers first, a ladder second, cash last

Answer. Every ambassador is recruited from the founding cohort that already enrolled and, wherever the campus's own placement calendar allows, already has a personal result to describe, never cold-recruited off a general campus post, because the one data point BeyondTech already has on cold ambassador recruitment (W13's 15 reactions against W14's 269) shows that approach does not work. The incentive ladder pays per confirmed enrolment, not a flat stipend (A14 and A15), plus a separate referral reward on the giver-and-joiner split BeyondTech already uses at DTU (A16). Payout triggers only on a confirmed, fee-paid enrolment after a cooling-off period, which is a deliberately more conservative control than most of the precedents this section benchmarks against.

19.1 Selection: from the cohort, not cold

The founding cohort (A17: 12 bear, 20 base, 30 bull students per new campus) is the only pool ambassadors are drawn from. A candidate is approached only after their own enrolment is confirmed and, ideally, after their own placement outcome is known, so that the ambassador role is an extension of a true personal story rather than a brand-promotion job offered to a stranger. This selection rule is the direct, deliberate correction of insight I4: the ambassador-recruitment LinkedIn post that named DTU, NSUT, Thapar and BITS Pilani drew about 15 reactions, eighteen times fewer than a Founder's Office internship post on the same page three weeks later, which drew about 269 [W13, W14]. The lesson is not that ambassadors are a bad idea; it is that an ambassador ask with no personal result behind it loses to every other unpaid-labour ask on a student's feed, while an ask made to someone who already has an offer to point to does not face that same competition.

19.2 Tasks

Drawing on the precedent programmes this document's own research lane verified, an ambassador's task list is kept narrow and specific, closer to Internshala's Student Partner model than to a vague "brand ambassador" title:

- Promote BeyondTech's confirmed, dated campus events (the case league, the founding-cohort's own result stories) on the ambassador's own and the host society's channels, matching the structure the Internshala Student Partner programme already uses for its own task list [RG13].
- Refer specific, named students into the next cohort's application pool, earning the referral reward (A16) on confirmed enrolment, the same structured-referral mechanism BeyondTech already runs at DTU (channel C-ORG-5, M T3).
- Run or co-run a small peer information session ahead of the next cohort's application window, using their own result as the session's proof point.
- Moderate the campus's BeyondTech WhatsApp community, the same 1:1-chat sales motion BeyondTech already relies on at DTU (W11), but now distributed across an ambassador rather than concentrated solely on the founder.

Coding Ninjas' own ambassador programme similarly combines referral-based incentives with weekly task-based rewards and a sponsorship-securing task [RG05], and Internshala's ISP similarly combines promotion, learning-session delivery and scheduled-contest participation [RG13]. The ambassador task list here is deliberately narrower than either precedent, reflecting BeyondTech's own much smaller scale at this stage.

19.3 The incentive ladder, in rupees

Lever	Bear	Base	Bull	Basis
Ambassador-sourced enrolments per ambassador per season (A14)	2	4	7	Benchmarked against the precedent programmes in 19.4 below
Ambassador payout per enrolment (A15)	₹1,500	₹1,000	₹750	About 8 percent of the base A01 fee, compared against RiseUpp's ₹5,000-per-enrolment benchmark (F13)
Referral reward per enrolment, split giver and joiner (A16)	₹1,500	₹1,000	₹500	Policy choice, matching the DTU structured-referral channel's own reward logic

Note that A15 is paid on an ambassador's sourced enrolment and A16 is a separate, smaller referral reward available to any enrolled student (ambassador or not) who refers a successful applicant; a single enrolment sourced by an ambassador through a direct referral could in principle trigger both, and the model treats these as the two distinct levers they are rather than collapsing them into one payout line.

19.4 What the precedents actually pay, correctly stated

Precedent	Scale, correctly stated	Payout structure	Source
Coding Ninjas (Ninja Entrepreneur Programme)	Approximately 1,000 campus ambassadors across 1,000-plus campuses, not the originally seeded "4,000-plus," which conflated ambassadors with a separate, larger teaching-assistant cohort [ruling G-C1]	Referral-based incentives for paid-course sign-ups, plus weekly task-based rewards and sponsorship-securing rewards; no fixed stipend	RG01, RG02, RG05
RiseUpp	Open to first- and second-year students, remote, pan-India, uncapped earnings	₹5,000 per confirmed enrolment, no fixed stipend, plus a ₹10,000 scholarship card for selected ambassadors and one year of free Coursera access for top performers	RG06, RG07
Internshala Student Partner (ISP)	A recurring, re-opened, fixed-cycle programme (the live fetched cycle showed applications 6 to 28 October 2026, a contest period of 2 to 18 November 2026)	Current cycle names no cash figures publicly (an iPad, "performance-based cash rewards," training credits, certificates, LORs); an older, undated edition paid ₹150 per confirmed training enrolment plus ₹5 per new platform registration	RG11 to RG15

Precedent	Scale, correctly stated	Payout structure	Source
GeeksforGeeks Campus Mantri	An older, dated (2022-era) cohort structure, which may not reflect the current programme	Quarterly Amazon-voucher rewards up to ₹8,000, plus a goodies bag worth ₹2,000	RG08, RG09
Scaler / Young Innovators India Challenge	Not a college-level ambassador programme; it recruits referral-based ambassadors for a school-level (Class 11 to 12) challenge feeding a separate admissions funnel, per ruling G-C3	Tiered referral rewards: 3-plus referrals for a mug and certificate, up to 20-plus referrals for a jacket, a three-month subscription and a guaranteed admissions-test interview slot	RG18, RG19

BeyondTech's own ladder (₹750 to ₹1,500 per enrolment, A15) sits below RiseUpp's flat ₹5,000 figure, and this is a deliberate, not an oversight, choice: BeyondTech's ambassador pool is restricted to proven founding-cohort members rather than opened to any first- or second-year student pan-India, which is the exact cold-recruitment risk RiseUpp's higher, uncapped-earnings structure appears to be compensating for. A lower per-enrolment payout is defensible precisely because the ambassador is already a satisfied customer with a personal story, not a stranger being paid to promote an unfamiliar product.

19.5 Fraud and quality controls

Control	Mechanism	Rationale
Payout only on confirmed enrolment	Payout triggers on fee receipt, not on application or lead submission	Matches the ladder's own design intent (A15 is explicitly "per enrolment"); prevents an ambassador from being rewarded for low-quality leads that never convert
Cooling-off period	A short holding window (for example, 15 to 30 days post-enrolment, a policy choice this document proposes since no precedent source specifies one) before payout releases	Guards against a referred student dropping out or seeking a refund shortly after enrolling, which would otherwise leave BeyondTech having paid an ambassador for a customer it did not actually keep
Per-ambassador season cap	Capped at the model's own upper bound for ambassador-sourced enrolments per season (7, the bull-case value of A14)	Prevents over-reliance on, or gaming by, a single high-volume ambassador, and keeps the founding-cohort-only selection pool from being stretched past what one season's cohort can plausibly refer
Fit-interview gate preserved	Every referred student still passes through BeyondTech's existing gated application, review and fit interview (W06) before enrolling	Ensures an ambassador's referral reward never rewards pushing an unqualified or unwilling student through the funnel just to trigger a payout

No precedent source reviewed in this research specifies a cooling-off period of its own; this is a sensible design choice proposed here for BeyondTech's own ladder rather than a benchmarked figure, flagged as a policy proposal, not a verified industry standard.

19.6 Expected yield

Scenario	Ambassadors per campus	Ambassador-sourced enrolments per campus (A14 x ambassador count)	Ambassador payout cost per campus (M T10)	Across the four new campuses (derived, est.)
Bear	2	4	₹6,000	16 enrolments, ₹24,000
Base	4	16	₹16,000	64 enrolments, ₹64,000
Bull	8	56	₹42,000	224 enrolments, ₹1,68,000

These ambassador-sourced figures are a subset of each campus's full season-2 enrolment total (18.0 bear, 60.0 base, 150.0 bull, per M T10), the remainder coming from the founding cohort's own continued word of mouth and the season-2 multiple (A20). The four-campus totals in the right-hand column are this document's own derivation (est.), not a separately modelled output, and are presented as such.

19.7 Why the ambassador ladder costs less than it looks

At first glance, an ambassador payout of ₹750 to ₹1,500 per enrolment (A15) sitting alongside a referral reward of ₹500 to ₹1,500 per enrolment (A16) might look like BeyondTech is paying twice for the same acquisition. It is not, for two reasons that the DTU channel plan already demonstrates. First, the two levers serve different populations: A15 rewards a founding-cohort member for the structural work of running sessions, moderating a community and keeping a campus's funnel alive across a season, while A16 rewards any enrolled student, ambassador or not, for a single successful introduction. Second, both figures sit well inside what BeyondTech already treats as an acceptable cost per enrolment at DTU, as the comparison below shows:

Channel	Cost per enrolment	Basis
DTU structured referral (C-ORG-5)	₹2,000	M T3, the base-scenario cash and founder-hour blended CAC BeyondTech already runs at DTU
New-campus ambassador payout (A15), base case	₹1,000	Section 19.3 above
New-campus referral reward (A16), base case	₹1,000	Section 19.3 above
New-campus ambassador payout (A15), bear case (most expensive of the three scenarios)	₹1,500	Section 19.3 above

Even the bear-case, most expensive version of the new-campus ambassador ladder costs the same as DTU's own flagship organic referral channel, and the base and bull cases cost less. The new-campus ambassador ladder is, in this light, a cheaper acquisition channel than DTU's own best organic channel, not a new, riskier cost line added on top of the model.

19.8 The compounding case for starting small

The flywheel description in this section's own heading, customers first, a ladder second, cash last, matters because each season's ambassador cohort is drawn from the previous season's enrolled base, which means the pool of eligible ambassadors grows every season a campus stays open, without BeyondTech ever having to run a fresh, cold recruitment round of the kind that drew only 15 reactions the one time it was tried [W13]. A campus's season-1 founding cohort of 20 students (base case, A17) producing 4 ambassadors (A14's implied ratio) is a modest first flywheel turn; by the time that same campus has run two or three seasons, the ambassador pool is drawn from a cumulative base of enrolled, placed students rather than from one thin founding cohort, which is the structural reason this flywheel, once started, should need progressively less founder-hour input per new ambassador recruited, consistent with the founder-hours efficiency this document's section 20 reports for DTU itself.

---

20. Economics of expansion: each campus pays back in season 1 in the base case

Answer. Under the base and bull scenarios, every one of the four locked picks breaks even inside its own first season; under the bear scenario, every pick needs a second season to recover its case-league and founding-cohort costs. This is true identically across all four campuses by the model's own symmetric-treatment design, because the per-campus launch template (founding cohort size, discount, case-league cost, ambassador ladder) is held constant across picks so that differences in a campus's Fit score never quietly leak into a differently generous or stingier launch budget. Rolled up with DTU, the 12-month plan ranges from a bear-case loss of about ₹15.9 lakh to a bull-case contribution of about ₹38.2 lakh, and the founder's own time budget still fits inside his available hours even after adding four new campuses, because the hours freed by a more efficient DTU funnel outweigh the hours the four new campuses add.

20.1 The per-campus launch P&L, identical by design

Scenario	Founding cohort	Fee, season 1	Case-league cost	Revenue, season 1	Cash, season 1	Ambassadors	Ambassador cost, season 2	Enrolments, season 2	Revenue, season 2	Cash, season 2	Break-even
Bear	12	₹4,000	₹60,000	₹48,000	−₹12,000	2	₹6,000	18.0	₹1,44,000	₹1,26,000	Season 2
Base	20	₹7,200	₹45,000	₹1,44,000	₹99,000	4	₹16,000	60.0	₹7,20,000	₹8,03,000	Season 1
Bull	30	₹12,600	₹30,000	₹3,78,000	₹3,48,000	8	₹42,000	150.0	₹27,00,000	₹30,06,000	Season 1

This exact table applies to BITS Pilani (Pilani campus), NIT Tiruchirappalli, PEC Chandigarh and COEP Technological University, Pune without variation, per M T10's own symmetric treatment. The table is reported once here rather than four times, since repeating identical figures four times would add length without adding information; the next table confirms which four colleges this applies to and on what basis.

20.2 The four picks this template applies to

Pick	Fit score	Screen result	Stability (share of 2,000 weight draws staying in the final four)
BITS Pilani (Pilani campus)	3.00	Pass	100.0 percent
NIT Tiruchirappalli	2.65	Pass	100.0 percent
PEC Chandigarh	2.40	Pass	97.5 percent
COEP Technological University, Pune	2.40	Pass	97.2 percent

No old IIT reached this final four; the four picks are reported here plainly, as the model's own result, not as an outcome either engineered toward or away from an IIT-heavy list [M T8, T9].

20.3 The bear-case interpretive note on break-even

The bear scenario's season-2 break-even is not a sign the plan is weak; it is the plan working as designed under its most conservative assumptions. A 12-student founding cohort at a 50 percent discount generates only ₹48,000 of season-1 revenue against a ₹60,000 case-league cost (the bear scenario's cost is the highest of the three, since no economy of scale exists yet, per A21's own basis), producing a modest −₹12,000 season-1 cash position. Season 2's ambassador-sourced enrolments (18.0, driven by A20's multiple on the founding-cohort base) bring the campus to a cumulative positive cash position of ₹1,14,000 (−₹12,000 plus ₹1,26,000) by the end of season 2. This is the scenario the day-30, day-60 and day-90 kill-or-scale thresholds (section 18.4, M T14) exist to monitor, so that a campus tracking toward this slower bear-case path is identified and managed deliberately, rather than discovered as an unplanned shortfall partway through a season.

20.4 The 12-month roll-up: DTU plus four campuses

Scenario	Total enrolments	Total spend	Total revenue	Total contribution
Bear	168.0	₹22,24,811	₹11,52,000	−₹15,91,211
Base	245.0	₹5,31,650	₹25,56,000	₹11,29,750
Bull	330.0	₹1,46,222	₹52,92,000	₹38,22,778

The bear-case loss here carries the same interpretive flag already stated against the DTU-only bear scenario (section 11 to 12 of this document): bear-case conversion rates compound badly across several funnel stages at once, so even a reduced enrolment target costs far more per head to reach. The bear scenario is a stress case that justifies why the kill-or-scale checkpoints exist; it is never presented as a second, lower-cost spending option a founder might actually choose.

20.5 Price sensitivity: what the fee lever is worth

Program fee	Breakeven enrolments needed
₹8,000	8.7
₹12,000 (the base assumption, A01)	5.8
₹18,000	3.8

The program fee (A01) is already confirmed, in the DTU-only sensitivity tornado (M T7), to be by far the largest single lever on contribution, with a swing of ₹10,72,500 between its bear and bull values, more than double the next largest lever (application-to-enrolment conversion, A09, at ₹4,68,419). This price-sensitivity table restates the same lever in a different, more operational unit: at the base fee, a new campus needs fewer than six enrolments to recover its launch cost, a target well inside even the bear-case founding cohort's own size of 12 students.

20.6 Founder hours: the time budget this plan actually fits inside

Metric	Value
Hours today	220
Hours after the plan, DTU only	132
Hours added by the four new campuses, combined	64

Metric	Value
Hours after the plan, total	196
Hours freed at DTU by the plan	88
Annual capacity ceiling (A31, 20 hours per week base case x 52)	1,040
Fits inside the founder's available time	True

The net effect of the plan is a 24-hour-per-year reduction in founder time (220 hours today against 196 hours after, M T11) despite the founder now serving five campuses instead of one. This is possible only because the DTU-side efficiency gain (88 hours freed, driven by moving from a 2.0-hours-per-enrolment founder cost today, A22 base case, to a 0.8-hours-per-enrolment cost after the plan, A23 base case, through group information sessions, alumni interviewers and a published price band) is larger than the 64 hours the four new campuses add. The founder's time, not his cash, is this plan's real constraint, and this table is the evidence that the plan was built against that constraint explicitly, consistent with the organiser playbook's own instruction to promise decisions and artefacts a founder controls, and to state the founder's time cost honestly rather than overpromise reach (P07, P11).

20.7 What has to be hired or delegated as the campus count grows

The 64 hours the four new campuses add, plus the ongoing fit-interview and mentoring load at DTU, are the two demands on founder time that this plan does not expect the founder himself to carry in full once the campus count passes four. Two delegation points follow directly from the roles already defined in sections 18 and 19 of this document:

- **Outreach and checkpoint tracking** (the society approach, the application funnel, the T14 threshold tracking across four simultaneous 90-day windows) is already assigned to Team IdeaForge in the launch playbook (section 18.5), not to the founder, precisely because this is the task set that scales linearly with campus count and does not require the founder's own fit-interview judgment.
- **Mentoring and fit-interview capacity** is the one task set that genuinely cannot be delegated away from people with the right background, since it depends on the same credibility (a Bain, Amazon or Google-level mentor's own standing) that makes the founding-cohort offer worth the discount in the first place. BeyondTech already has four named mentors beyond the founder (Subham Mukhopadhyay at Bain & Co., Subrat Sarangi at Amazon, Akshit Goel at Google, plus the founder himself, per the corrected mentor count, ruling X4); as the campus count grows past four, the plan's own hours math (20.6) implies this mentor bench, not the founder alone, needs to absorb a growing share of the fit-interview and mentoring load, which is a hiring and scheduling decision for BeyondTech to make once season 2 enrolment volumes (M T10) are confirmed rather than projected.

Neither of these is modelled as a line item in T10 to T12, since BeyondTech's own gross margin assumption (A24: 55 percent bear, 65 percent base, 75 percent bull, after mentor and tool cost) already treats mentor compensation as a cost against revenue rather than a separate hiring budget this document would need to size independently.

20.8 Payback, stated once more, by scenario and by season

Scenario	Season-1 cash per campus	Season-2 cash per campus	Cumulative position after season 2	Payback season
Bear	−₹12,000	₹1,26,000	₹1,14,000	Season 2
Base	₹99,000	₹8,03,000	₹9,02,000	Season 1
Bull	₹3,48,000	₹30,06,000	₹33,54,000	Season 1

This table restates the per-campus P&L (20.1) in the single unit the section heading itself promises: the season in which each campus's own launch cost is recovered. In the base and bull cases, the founding cohort's own season-1 revenue alone already exceeds the case-league cost, so break-even happens before season 2's ambassador-driven enrolments are even counted. In the bear case, season 1 alone is not enough, and the campus carries a small negative cash position into season 2, where it is comfortably recovered.

20.9 Reading the roll-up against DTU alone

It is worth setting the four-campus roll-up (20.4) against the DTU-only scenarios from earlier in this document (M T6) to see what the new campuses actually add, rather than reading the roll-up figure in isolation. DTU alone, base case, produces ₹9,35,350 of contribution (M T6); the full roll-up, base case, produces ₹11,29,750 (M T12), meaning the four new campuses together add roughly ₹1,94,400 of base-case contribution on top of DTU's own number, after absorbing their own founding-cohort discounts and case-league costs. In the bull case, DTU alone produces ₹28,08,778 and the full roll-up produces ₹38,22,778, an addition of roughly ₹10,14,000. In the bear case, DTU alone already loses ₹14,56,811, and the four new campuses add a further loss, bringing the roll-up to −₹15,91,211, a reminder that the bear scenario is a stress test across every part of this plan at once, not a localised risk confined to the new-campus expansion alone.

20.10 What this section does not claim

This section does not claim that four new campuses will necessarily be launched in parallel, or that the founder's time budget (20.6) remains comfortable if a fifth or sixth campus is added without the delegation steps named in 20.7 actually being put in place first. The model's own founder-hours arithmetic is specific to five campuses total (DTU plus the four locked picks); a sixth campus would add a further, as yet unmodelled, slice of founder hours on top of the 196-hour total already projected, and this document does not extend the model past the four picks the brief itself asks for (B19).

The same discipline applies to the symmetric-treatment choice itself (20.1). Holding the founding-cohort size, discount, case-league cost and ambassador ladder identical across all four picks is a deliberate modelling decision, not an oversight that ignores the real differences between the picks. BITS Pilani's Fit score of 3.00 and 100 percent stability sit well above PEC Chandigarh's 2.40 and 97.5 percent, and a model that quietly gave the higher-Fit pick a larger launch budget would make the scorecard's own ranking harder to interpret, since any resulting difference in projected contribution could then come from either the ranking or the budget, with no way to tell which. Holding the launch template constant isolates the comparison to exactly what the scorecard measures, recruiter overlap, non-tech offer depth, society surface, prep vacuum, calendar fit and access, and leaves it to a later, campus-specific planning pass, once real enrolment data exists from the first season, to decide whether a higher-Fit campus in fact deserves a larger founding cohort or a smaller case-league budget than a lower-Fit one. That decision is explicitly out of scope for this document, which is built to support the selection and the launch design, not to re-open the scorecard's own weights to justify a differentiated spend before any actual season has run.

21. The twelve-month roadmap: two waves, five campuses, one calendar

Answer. BeyondTech's calendar runs DTU first for three months, then opens two new campuses in January 2027 and two more in the summer of 2027, so the founder never carries more than one launch wave at a time. BITS Pilani (Pilani campus) and NIT Tiruchirappalli form Season 1, timed to BeyondTech's own confirmed 15 January 2027 batch start [W05]; PEC Chandigarh and COEP Technological University, Pune form Season 2, a later 2027 batch [WRITER-BRIEF locked numbers]. Every gate in the calendar is a number, not a date alone: the day 30, 60 and 90 thresholds from T14 decide whether a campus scales, holds or is quietly wound down before it drains more founder hours than it returns [M T14].

21.1 Why DTU goes first

The sequencing is not a convenience, it is a constraint the model proves. Founder hours today run at 220 a year, almost entirely spent on DTU's own fit-interview-and-WhatsApp sales motion [M T11, A22]. After the DTU plan's layer-1 fixes (gating the resource library, publishing a price band, moving first-contact screening into group information sessions), DTU alone falls to 132 hours a year [M T11, A23], freeing 88 hours before a single rupee is spent on a new campus. Only once that headroom exists does the model add the four new campuses, which together cost 64 more hours, landing the founder at 196 hours a year against an annual capacity of 1,040 hours (20 hours a week, A31, times 52) [M T11, A31]. Months 1 to 3 (October to December 2026) are therefore DTU-only by design: the organic channels (society workshops, department representatives, the mock placement drive) go live first, both because they are the cheapest channels in the plan [M T3, T4] and because they are what frees the founder's own time before he is asked to answer a 180 Degrees Consulting chapter's WhatsApp message from a different city.

21.2 The month grid, October 2026 to September 2027

Month	DTU track	New-campus track	Milestone
Oct 2026	Society co-hosted case workshops launch; gated resource library and fee-band page go live [M T3, T5]	Scoping calls to the 180DC BITS Pilani branch and NIT Trichy's BFC umbrella club begin, using the entry wedges from each dossier [RE12, RE20 (BITS Pilani); RE35 (NIT Trichy)]	Month 1 of the DTU-first window
Nov 2026	Department and branch representatives recruited; mock placement drive scheduled [M T3]	Case-league terms (prize pool, society fee split per A21) finalised with both Season 1 host societies	Month 2
Dec 2026	Placement cell information session; structured referral programme goes live [M T3, T5]	Founding-cohort marketing material (question-bank slice per recruiter, A17 cohort size) prepared for both Season 1 campuses	Month 3; founder hours at DTU cross into the freed 88-hour range [M T11]
Jan 2027	DTU's own 15 January batch opens [W05]; Meta retargeting of warm audiences begins, the first paid channel funded [M T3, T4]	Season 1 launches: co-branded case leagues at BITS Pilani (with 180DC) and NIT Tiruchirappalli (with the BFC umbrella of 180DC, ProfNITT and SIGMA); founding cohorts open (A17 base 20 per campus)	Season 1 Day 0

Month	DTU track	New-campus track	Milestone
Feb 2027	Alumni LinkedIn story series live [M T3]	Day 30 gate for both Season 1 campuses: founding-cohort applications checked against T14's stop-below-6, scale-above-14 bear-case threshold [M T14]	Decision gate 1
Mar 2027	DTU budget mid-point review against T5's monthly spend curve	Day 60 gate: founding-cohort fill checked against stop-below-10, scale-above-12 [M T14]	Decision gate 2
Apr 2027	n/a	Day 90 gate: founding-cohort offers secured checked against stop-below-2, scale-above-7 [M T14]; Season 1 scale, hold or stop decision locked	Decision gate 3
May 2027	n/a	Season 2 scoping: PEC Chandigarh's Entrepreneurship and Incubation Cell coordinator approached [RE14 (PEC)]; COEP's Consulting Club approached [RE25 (COEP)]	Season 2 preparation
Jun 2027	n/a	Season 2 founding cohorts open at PEC and COEP, timed to PEC's internship-registration window closing 20 January having already passed and its even-semester calendar running to 8 May 2026, with the following cycle's analogous window used as the 2027 proxy [RE01 to RE03 (PEC)]	Season 2 Day 0
Jul 2027	Ambassadors recruited from the Season 1 founding cohorts begin season 2 at BITS Pilani and NIT Tiruchirappalli (A14 base 4 ambassadors per campus) [M T10]	Day 30 gate for Season 2 (PEC, COEP)	Decision gate 4
Aug 2027	Season 1 ambassador-sourced enrolments tracked against A14's base case	Day 60 gate for Season 2	Decision gate 5
Sep 2027	Twelve-month roll-up compiled against T12	Day 90 gate for Season 2; year-one review	Decision gate 6; T12 close

21.3 Wave logic

The two waves are not an arbitrary split of four picks into two pairs. Season 1 takes BITS Pilani (Pilani campus) and NIT Tiruchirappalli, the two picks the plan's own selection rule (PLAN.md section 7.5, step 4) names as the highest-access pair, launched against BeyondTech's own confirmed next-batch date of 15 January 2027 [W05]. Season 2 takes PEC Chandigarh and COEP Technological University, Pune, a later 2027 batch, which gives the founder a second three-to-four-month runway to absorb what Season 1 actually taught him about running a case league and a founding cohort somewhere he has never been before. Running all four at once would have meant four simultaneous day-30 gates landing inside the same fortnight that DTU's own January batch opens, exactly the overload T11 is built to warn against. Running them in two pairs means the founder faces, at most, two new relationships to build trust with per quarter, not four.

Wave	Campuses	Fit score	Stability (of 2,000 draws)	Launch window
Season 1	BITS Pilani (Pilani campus)	3.00	100.0%	January 2027 batch
Season 1	NIT Tiruchirappalli	2.65	100.0%	January 2027 batch
Season 2	PEC Chandigarh	2.40	97.5%	Summer 2027 batch
Season 2	COEP Technological University, Pune	2.40	97.2%	Summer 2027 batch

[M T8, T9; WRITER-BRIEF locked numbers]

21.4 Dependencies

Three dependencies bind the calendar together. First, DTU's own layer-1 funnel fix (gating the library, publishing the fee band) has to land before month 3 closes, because it is the mechanism that frees the 88 hours the new-campus launches borrow against [M T11]. Second, each new campus's own calendar constrains when its case league can land: BITS Pilani's own entry wedge targets late April or early May, just ahead of its Practice School-II preference window and before its August placement push [RE12, RE01 (BITS Pilani)], while NIT Tiruchirappalli's wedge targets a window before its February Pragyan fest or September Festember, borrowing the 180DC and ProfNITT Instagram reach [RE35 (NIT Trichy)]. Where a dossier's own best-evidenced timing (for example, BITS Pilani's late April or early May case-workshop window) sits later than the Season 1 January launch date this roadmap uses for the founding-cohort opening, that tension is carried honestly into section 23's risk register as DTU-and-new-campus calendar uncertainty, not smoothed over. Third, PEC's own academic calendar (even-semester classes 12 January to 8 May, sixth-semester internship registration opening 10

November and closing with signed offer letters by 20 January) sets a hard outer bound on when its Season 2 cohort can plausibly recruit without competing against PEC's own internship cycle [RE01 to RE03 (PEC)].

21.5 Decision gates

Every gate in the grid above ties to a named T14 threshold, never to a calendar date alone. At day 30, fewer than 6 founding-cohort applications stops that campus's launch; more than 14 scales it, meaning the case league and ambassador plan can move faster than the base case assumed. At day 60, a founding-cohort fill under 10 stops; over 12 scales. At day 90, fewer than 2 offers secured stops; more than 7 scales [M T14]. These thresholds are drawn from the bear scenario and, per PLAN.md's own design, apply uniformly to all 4 picks, so the roadmap above reuses the same three gates for Season 2 in July, August and September 2027 rather than inventing separate thresholds per campus. A campus that stops at any gate does not disappear from the roadmap; it moves to a holding pattern (no further cash spend, the founding cohort already enrolled finishes its programme) while the lead decides whether the next reserve-bench college (section 15's reserve bench: BITS Pilani Goa campus, NIT Warangal, IIT Roorkee or IIT Delhi) should be substituted into the following season.

Checkpoint	Metric	Stop below	Scale above	Applies to
Day 30	Founding-cohort applications	6	14	All 4 picks, both waves [M T14]
Day 60	Founding-cohort fill	10	12	All 4 picks, both waves [M T14]
Day 90	Founding-cohort offers secured	2	7	All 4 picks, both waves [M T14]

22. Measuring it: one north star and the numbers that would prove us wrong

Answer. The one north star is total enrolments across DTU and the four new campuses, targeted at 165 at DTU alone by month 12 on top of whatever Season 1 and Season 2 add, built up from a KPI tree of leads, applications, enrolments, CAC, referral share, second-year share, founding-cohort fill and offers banked [M T13]. Every number on that tree is instrumented from day one with UTM codes per channel, a referral code per ambassador and one shared lead sheet, so a leak shows up in the sheet before it shows up in a missed target. The 30, 60 and 90 day signals in section 21 are restated here in the opposite direction: they are not proof the plan is working, they are the specific numbers that, if missed, would prove the plan wrong and trigger a stop.

22.1 The KPI tree

Level	Metric	Baseline	Month 3	Month 6	Month 12	Source
North star	Total enrolments (DTU, base case)	110	41.2 (incremental)	90.8 (incremental)	165.0	[M T13]
Top of funnel	Leads	0 (not tracked)	1,465	3,222	5,859	[M T13]
Mid funnel	Applications	0 (not tracked)	176	387	703	[M T13]
Efficiency	Blended CAC	n/a	₹2,131	₹2,131	₹2,131	[M T13, T6]
Channel health	Referral share	80% A05 base	72%	80%	80%	[M T13]
Reach breadth	Second-year share of acquisitions	0.0%	10%	16%	20% A28 base	[M T13, A28]
New-campus health	Founding-cohort fill	0.0%	40%	80%	100%	[M T13]
New-campus proof	Offers banked, across 4 new campuses	0	0	4	8	[M T13]

The tree reads top to bottom as a single chain of custody: a lead that never becomes an application cannot become an enrolment, and an enrolment that never becomes an offer cannot become the proof story the next campus borrows. The baseline row matters as much as the month-12 row. DTU's own channel mix today is about 80% referral A05 base, assumption, so the month-3 dip to 72% is not a sign the plan is failing, it is the diagnostic that new channels (the gated resource library, the mock drive, the paid retargeting) have started contributing enrolments that are not referral sourced, exactly what the plan is designed to produce. By month 6 and month 12 the referral share climbs back to 80%, because the absolute number of referred students keeps growing even as new channels add their own volume on top, not because the new channels stopped working.

22.2 T13 in full, baseline through month 12

Milestone	Leads	Applications	Enrolments (incremental)	CAC	Referral share	2nd-year share	Founding-cohort fill	Offers banked (4 new campuses)
Baseline (today)	0	0	110 (current total, A04 base)	n/a	80.0%	0.0%	0.0%	0
Month 3	1,465	176	41.2	₹2,131	72.0%	10.0%	40.0%	0
Month 6	3,222	387	90.8	₹2,131	80.0%	16.0%	80.0%	4
Month 12	5,859	703	165.0	₹2,131	80.0%	20.0%	100.0%	8

[M T13] throughout. The CAC column holds flat at ₹2,131 across every milestone because T13 is drawn from the base-case channel mix of T3 and T4, which funds channels in the same ascending-cost order at every point in the season; CAC would only move if the channel mix itself changed mid-season, which the plan does not propose. The founding-cohort fill and offers-banked columns are new-campus metrics, not DTU metrics, and they read as zero at baseline and month 3 because Season 1's new campuses do not open until January 2027 (section 21); the month 6 and month 12 figures assume Season 1 is already running on schedule.

22.3 Instrumentation

Three mechanisms carry every number in the KPI tree from a channel activation to the shared lead sheet, and all three are cheap enough that none of them competes with the budget in section 12 (DTU budget) or section 20 (campus economics) for cash.

- **UTM codes per channel.** Every one of the 11 DTU channels and every new-campus channel gets its own UTM-tagged link: a society workshop's sign-up form, the gated resource library's download gate, each paid Meta or LinkedIn creative, and each micro-influencer's post. Without this, the model's own channel-level CAC figures in T3 and T4 would be unverifiable in practice; the UTM code is what turns a model assumption into a measured fact once the plan is live.
- **Referral codes per ambassador.** Once the ambassador flywheel starts (season 2 at each new campus, section 19), every ambassador gets a unique referral code, not a shared campus-wide link. This is the only way to compute an individual ambassador's enrolments-per-season figure against the A14 benchmark (bear 2, base 4, bull 7) rather than guessing at an average across the whole cohort, and it is also the control that makes ambassador-fraud detection possible (section 23's risk register).
- **A single shared lead sheet.** Every channel, every campus and every ambassador writes into one sheet, not a separate spreadsheet per activation. This is a deliberate choice against BeyondTech's current state, where the sales motion is a single founder's WhatsApp inbox and a fit-interview calendar [W06, W11]; a shared sheet is the minimum structure needed before the founder can delegate any part of first-contact screening, which is itself one of the two levers behind the hours-freed figure in T11.

Instrument	What it tags	Replaces	First active
UTM code per channel	Every DTU and new-campus channel's own link or creative	No channel-level tracking today; BeyondTech cannot currently say which of its own channels drove a given enrolment	Month 1 (section 21)
Referral code per ambassador	Each ambassador's individually attributable enrolments	A shared campus-wide referral link, which cannot isolate one ambassador's yield from another's	Season 2 of each new campus (section 19)
Shared lead sheet	Every lead, application and enrolment, across every channel and campus	The founder's own WhatsApp inbox and calendar as the only record [W06, W11]	Month 1 (section 21)

22.4 The 30, 60 and 90 day signals, restated as what would prove us wrong

Section 21 presented T14's thresholds as decision gates on a calendar. Read the same numbers as falsification tests, in the spirit of PLAN.md's own falsification rules (section 4.6): each one is a number that, if missed, means the plan's own model of how a new campus adopts BeyondTech is wrong, not just slow.

- **Day 30, fewer than 6 founding-cohort applications.** If a campus has not produced at least 6 applications a month after its case league, the model's bear-case assumption that a co-branded event converts attendees into applicants at a workable rate is wrong for that campus specifically, and continuing to spend against it would be funding a thesis the first month of real data already rejected.
- **Day 60, a founding-cohort fill under 10.** If half the founding cohort's 20 base-case seats (A17) remain unfilled two months in, either the founding-cohort discount (A18, 40% base) is not enough to overcome price opacity at a brand-new campus, or the host society's trust transfer (section 17's ladder) did not actually transfer, and both are falsifications of the launch mechanism, not the launch calendar.

- **Day 90, fewer than 2 offers secured.** This is the sharpest test of all, because it is the first real-world instance of BeyondTech's own promise, a non-tech placement prep course that produces offers, actually landing somewhere other than DTU, NSUT, Thapar or BIT Mesra. If a founding cohort of 20 students produces fewer than 2 offers in a full placement cycle, the core transferability assumption behind the whole pan-India pillar (that BeyondTech's recruiter-specific question bank travels to any campus the same 20 anchor recruiters visit) is the thing that is wrong, not merely this one campus's execution.

Each of these three numbers scales above its stop threshold into an explicit scale signal (14 applications, 12 fill, 7 offers), so the same instrumentation that catches a failing campus early also catches a campus that is quietly outperforming the base case and should have its budget and ambassador count moved up to the bull-case figures in T10 before season 2 begins.

Day	Signal that would prove the plan wrong	What it falsifies
30	Fewer than 6 founding-cohort applications [M T14]	The case league converts attendees into applicants at a workable rate
60	Founding-cohort fill under 10 of 20 base-case seats [M T14, A17]	The founding discount and the host society's trust transfer are enough to close enrolments
90	Fewer than 2 offers secured [M T14]	BeyondTech's recruiter-specific question bank transfers to a campus the same anchor recruiters visit

23. Risks and rules: twelve risks, a mitigation each, and the claims BeyondTech can and cannot make

Answer. Twelve risks sit across the plan, from society dependency at every new campus to a compliance posture that rests on secondary-sourced summaries of the CCPA and ASCI rules, and each carries exactly one mitigation rather than a vague "monitor closely" line. The sharpest of the twelve is the bear-scenario CAC spike (T6: ₹16,540 a head against a base of ₹2,131), because it is the one risk that is already visible in the model itself, not merely hypothesised. A separate claims table, taken directly from Lane H's rules research, states what BeyondTech can and cannot say in its own marketing with no ambiguity left for a judge to probe.

23.1 The risk register

#	Risk	Probability	Impact	RAG	Mitigation
1	Society dependency: each of the 4 new-campus entry wedges runs through one specific society (180DC BITS Pilani, the BFC umbrella at NIT Trichy, the EIC at PEC, the Consulting Club at COEP) [RE12, RE35, RE14, RE25]	Medium	High	Amber	Sign a written, dated co-hosting agreement with the named role (Consulting Director, EIC coordinator, club lead) before any cash is committed, and pre-identify the next-best society on each campus (section 10's partner shortlist equivalent for each new campus) so a lapsed relationship has a named successor, not a blank
2	Founder overload if execution slips: T11's net 24-hour-a-year reduction assumes the layer-1 DTU fixes land on schedule; if they slip, the founder absorbs both DTU's old 220-hour load and the new campuses' 64 added hours at once	Medium	High	Amber	Sequence strictly per section 21: do not open a Season 1 campus until the DTU gating and fee-band page are live and month-3 founder hours are tracked against the 132-hour DTU target, not assumed
3	Competitor response: CrackNonTech already claims DTU, BITS Pilani, NSUT and AKTU alumni [RD13] and could react to BeyondTech's own expansion by targeting the same new campuses first	Low	Medium	Green	Move first and lock the society relationship (mitigation 1) before any public announcement of the new-campus launch, since a signed co-host agreement is a harder asset for a competitor to dislodge than an ad campaign
4	Bear-scenario CAC spike: DTU's own bear case shows a blended CAC of ₹16,540, nearly 8 times the base case's ₹2,131, because bear-case conversion rates compound badly across several funnel stages at once [M T6; this is a stress case demonstrating why the T14 kill thresholds exist, never a second budget option]	Medium	High	Amber	Treat T14's kill thresholds as the live circuit breaker; do not fund the bear-case spend level (₹19,84,811) under any circumstance, since the model shows it produces a −₹14,56,811 contribution even as it buys fewer enrolments than the base case [M T6]
5	The Prism identity gap: "Prism," named by the brief as an NSUT recruiter [B06], could not be identified as a specific company after 6 search attempts across two lanes [C-C1, conflicts.md]	Low	Low	Green	Quote "Prism" exactly as the brief states it wherever NSUT's recruiters are listed, build nothing analytical on top of the name, and never let it enter any college's recruiter-overlap score

#	Risk	Probability	Impact	RAG	Mitigation
6	Thin societies.csv coverage: only 16 of the 30 target DTU society rows are filled, with 8 named societies (Enactus, Round Table, Kalakriti, AIMS, Semicon, EMCEE, ACM, Deb Soc) returning no public data after search [conflicts.md gap, societies.csv]	Medium	Medium	Amber	Build the DTU society partner shortlist (section 10) only from the 6 best-evidenced rows (180DC DTU, DCG, E-Cell DTU, Society of Robotics DTU, IEEE DTU, ASSETS DTU) rather than averaging across thin rows, and run one more targeted search pass before the DTU activation calendar (section 11) is finalised
7	F2 screen-relaxation: the anchor-recruiter screen was relaxed from 5 to 4 because only 2 non-IIT colleges passed at the stricter threshold [M T8, PLAN.md 4.6]	Low	Medium	Green	State the relaxation plainly in section 14 as evidence of a disciplined, rule-bound process (it is logged, not hidden), and note that all 4 locked picks pass the relaxed screen on their own official or aggregator-confirmed recruiter lists, not on the relaxation alone
8	DTU calendar uncertainty: the official 2026-27 T&P calendar, Engifest, Invictus and Yuvaan dates were not confirmed after search; the model uses an estimated 1 August placement-season start and one dated anecdote (ECE mid-terms, late September, est.) [conflicts.md gap, Lane B]	Medium	Medium	Amber	Treat every DTU-calendar-dependent date in section 11's activation calendar as provisional and confirm the real T&P Cell calendar directly with DCG, the co-organiser, before any society workshop is locked to a specific week
9	IIT Delhi's confirmed worse-than-expected calendar overlap, if ever promoted from the reserve bench: its calendar-fit score (C6) sits at band 1, the weakest band, and its stability share is 0.0% of 2,000 weight draws [M T8, T9]	Low	Medium	Green	If a Season 2 or later substitution is ever needed, promote BITS Pilani Goa campus (Fit 2.80, excluded only by the one-campus-per-institute portfolio rule) or NIT Warangal (Fit 2.20) ahead of any IIT, since both already clear the screen on stronger terms than IIT Delhi does
10	Two unconfirmed society logos: the DCG and 180 Degrees Consulting DTU chapter logos remain MISSING after 3 search attempts each [conflicts.md, J-R4], a minor brand-asset risk for the deck	Low	Low	Green	Use the standard dashed "<Name> logo" placeholder slot on every affected slide per the deck's own asset convention, and ask the user directly for the DCG logo, since DCG is the co-organiser of this exact competition and likely holds it on file
11	Campus ambassador fraud or quality risk: an ambassador paid per enrolment (A15, base ₹1,000 per enrolment) has a direct cash incentive to inflate or fabricate referral activity, a risk every precedent programme in Lane G (Coding Ninjas, Internshala ISP) structurally shares	Medium	Medium	Amber	Pay only against a unique per-ambassador referral code tied to a verified enrolment in the shared lead sheet (section 22.3), never against a self-reported count, and cap each ambassador's season payout at a ceiling tied to the founding-cohort size of their own campus, so one ambassador cannot claim more referrals than the cohort could plausibly hold
12	Compliance risk: every CCPA coaching-guideline and ASCI clause used in this plan is sourced to a secondary summary, not the primary regulation text, which could not be fetched as readable content from any official source tried [H-C1, conflicts.md]	Low	Medium	Green	Treat the claims-can/cannot table below as a conservative working guide, not a legal opinion, and have any claim BeyondTech actually intends to publish checked against the primary CCPA and ASCI text before it is used, since this plan's own sourcing stops at secondary commentary

23.2 Claims BeyondTech can and cannot make

The table below is Lane H's own claims-can/cannot table, reproduced in full [research/raw/R-H-rules.md].

#	Area	Claim we can make	Claim we cannot make or must qualify	Basis
1	Guaranteed outcomes	State that BeyondTech does not and should not advertise a "guaranteed selection," "guaranteed job," "100% placement" or "assured rank/marks" claim, consistent with the direction of the CCPA 2024 coaching guidelines and ASCI's education-sector clauses as described in secondary sources	Cannot assert as settled law that BeyondTech's current site or future ads would be found in violation if it made such a claim, because the primary CCPA and ASCI text was not read directly	[RH08, RH09, RH23, RH24]
2	Testimonials and named outcomes	State that any named outcome (a placed student's name, photo, package figure) used in a BeyondTech ad should be backed by that student's written consent given after the result, not at enrolment	Cannot state a single, confirmed universal rule number or exact statutory clause, since both sources are secondary paraphrase of the primary guideline text	[RH13, RH14]
3	Scope: does this even apply to BeyondTech	Can say BeyondTech's "coaching centre" status under the 2024 guidelines is plausible given the broad, secondary-sourced definition of coaching, and that treating itself as covered is the conservative, defensible posture	Cannot claim a confirmed finding that a college-level, non-tech-placement bootcamp for B.Tech students is explicitly in scope, as opposed to school or competitive-exam coaching	[RH03, RH04, RH06, RH07]

#	Area	Claim we can make	Claim we cannot make or must qualify	Basis
4	Ambassador or influencer disclosure	Can recommend that any paid, stipended, free-seat or commission-linked student ambassador post about BeyondTech carries an upfront "Ad" or "Partnership" label, not a bio-only disclosure	Cannot claim this is a settled, BeyondTech-specific legal requirement rather than an application of a general self-regulatory guideline; the application is the lane's own interpretive synthesis, flagged for review	[RH26 to RH35]
5	Student data collection (events, gated PDFs, referral forms)	Can recommend affirmative, itemised consent notices for every lead-capture point, age-gating for under-18 contacts, and a stated retention and deletion rule tied to purpose, as good DPDP-aligned practice for a small firm	Cannot claim BeyondTech, or a campus event organiser acting on its behalf, qualifies for the DPDP "educational institution" exemption from parental consent; sources disagree on how far that exemption reaches even for schools themselves	[RH36 to RH49]
6	WhatsApp outreach	Can recommend BeyondTech's existing WhatsApp CTA and any community group keep an explicit, business-named opt-in record and use pre-approved templates for any proactive or bulk message	Cannot state with confidence whether an opt-in must literally name "WhatsApp" to be valid, since two tiers of secondary sources disagree and Meta's own fetched page does not settle it	[RH51 to RH56]
7	Campus commercial activity (DTU, AICTE, UGC)	Can note that AICTE's own posture (MoUs with Monster India, apna.co and others) shows the regulator itself treats outside placement-support partners as something to formalise, not categorically bar, which supports the society tie-up entry model	Cannot cite any DTU-specific, AICTE-specific or UGC-specific rule that directly governs a private firm's campus-ambassador programme or a society co-branded case competition	[RH57 to RH59]

23.3 Competitor response

If BeyondTech's expansion becomes visible, the most plausible response is not a price war but a race for the same society relationships. CrackNonTech already names DTU, BITS Pilani, NSUT and AKTU among its alumni-claimed colleges [RD13, RE30 (PEC); RE20 (COEP) confirm neither PEC nor COEP currently appears on that list], which means BITS Pilani is the one Season 1 pick where a competitor already claims some foothold, however thin. NextLeap, now folded together with PM School after its February 2025 acquisition [RD20, D-C5], competes on product-management prep specifically and has shown no documented campus-ambassador structure of its own [competitors.csv], so it is a lower-probability mover than CrackNonTech on the society-relationship front. The mitigation in the risk register (row 3) is sequencing: BeyondTech's own co-hosted case league, once signed, is a harder relationship for a later entrant to dislodge than an advertising campaign would be, because it already carries the host society's own branding and a founding cohort's word of mouth.

Competitor	Named presence at a locked pick	Documented ambassador or campus structure	Most plausible response
CrackNonTech	BITS Pilani named among its alumni colleges [RD13]; PEC and COEP confirmed absent [RE30 (PEC), RE20 (COEP)]	No ambassador or social-channel structure found after search [competitors.csv gap]	Highest-probability mover, but only at BITS Pilani specifically, and with no confirmed channel to act on it quickly
NextLeap (with PM School)	None of the 4 locked picks named [competitors.csv]	None documented [competitors.csv]	Lower-probability mover; product-management-specific positioning does not directly overlap BeyondTech's broader non-tech question bank

23.4 Founder overload

T11 already shows the plan nets out positive: 220 hours today falls to 196 hours after the plan, even while BeyondTech expands from one campus to five [M T11]. That arithmetic depends on two things happening in the stated order. DTU's own hours have to fall from 220 to 132 before the four new campuses' 64 added hours are layered on top; if the DTU-side fix slips (for example, if the gated resource library or the published fee band is delayed past month 3), the founder would be running the old 220-hour DTU load and the new 64-hour new-campus load simultaneously, a combined 284 hours a year against an annual capacity of 1,040 hours A31. That still technically fits inside capacity on paper, but it erases the entire point of sequencing the launches in the first place, since the founder would be absorbing two major changes to his week at once rather than one. The register's mitigation (row 2) is accordingly a sequencing discipline, not a headcount fix: track month-3 founder hours against the 132-hour DTU target explicitly, and treat a miss on that number as a reason to delay Season 1's opening by one cycle, not a reason to open it anyway and hope the hours work out.

Scenario	DTU hours	New-campus hours	Total	Against 1,040-hour capacity
Today	220	0	220	Well inside capacity
Plan on schedule (DTU fix lands by month 3)	132	64	196	Net 24-hour reduction versus today [M T11]
Plan with a slipped DTU fix	220	64	284	Still inside capacity, but erases the sequencing rationale

23.5 Society dependency, stated once more precisely

Each of the four new-campus entry wedges is a single relationship, not a diversified channel. BITS Pilani's wedge runs through 180DC's Consulting Director or President [RE20, RE21]; NIT Tiruchirappalli's through the BFC umbrella combining 180DC, ProfNITT and SIGMA [RE35]; PEC Chandigarh's through the Entrepreneurship and Incubation Cell's coordinator, the only confirmed, currently active non-tech society found on that campus [RE14]; COEP Pune's through its own Consulting Club, pitched to the club's stated mission of exposing students to consulting careers [RE25 (COEP)]. None of these four societies has a confirmed follower count on Instagram or LinkedIn [RE22, RE25 (BITS Pilani gaps, where RE25 there is Finomaniac's own unconfirmed follower count); RE11 (COEP's own gap)], which means BeyondTech cannot yet size how much organic reach each relationship actually buys beyond the society's own membership. This is the honest version of the risk: it is not that the society might refuse to partner, it is that the plan has no independently verified number for how far that one partnership's reach extends, and the founding-cohort fill at day 60 (T14) is therefore the first real measurement of that reach, not a confirmation of a number the research already had.

24. Assumptions register

Answer. Thirty-four assumptions carry this plan's every modelled number, A01 through A30 drafted at the outset and A31 through A34 added by the model once it hit a genuine input gap [M T16]. Each one is stated as bear, base and bull, never as a lone figure, and each has a one-line basis so a judge can see exactly what evidence or policy choice stands behind it. Nine of the thirty-four (A02, A26, A27 among the weakest) are explicitly flagged elsewhere in this document as low confidence; the rest range from directly benchmarked (A11, A12, on published India ad-rate ranges) to pure policy choice (A16, A18, on what BeyondTech decides to pay or discount).

24.1 T16 in full, with basis

ID	Assumption	Bear	Base	Bull	Basis
A01	Program fee per student (₹)	8,000	12,000	18,000	Bracketed by CrackNonTech's now-unconfirmable price point and NextLeap's under-₹40,000 positioning; BeyondTech is longer and carries Bain, Amazon and Google mentors, assumption [PLAN.md 5.3]
A02	DTU B.Tech batch size per year	superseded	superseded	superseded	Superseded by the official NIRF-sourced sanctioned intake (RB01); kept in the register only, per model_tables.md T16
A03	Share of a DTU batch open to non-tech roles	20%	30%	40%	Non-circuital branches plus a share of circuital branches, set from DTU's own branch-intake structure, assumption [PLAN.md 5.3]
A04	BeyondTech DTU enrolments in the last 12 months	80	110	140	The brief's own "50+ selections" figure [B05] divided by an assumed 35% to 60% selection rate, assumption [PLAN.md 5.3]
A05	Share of current DTU enrolments arriving by referral	90%	80%	70%	The brief states marketing "relies entirely" on word of mouth, WhatsApp and LinkedIn [B13], assumption [PLAN.md 5.3]
A06	Society co-hosted event registrations per event	80	150	250	Benchmarked against public Unstop registration counts for comparable DTU society events, assumption [PLAN.md 5.3]
A07	Event registrant to lead conversion	35%	50%	65%	Webinar show-up benchmarks from Lane F's channel research, assumption [PLAN.md 5.3]
A08	Lead to application conversion	8%	12%	18%	Cohort-course funnel benchmarks from Lane F, assumption [PLAN.md 5.3]
A09	Application to enrolment (after fit interview)	30%	45%	60%	BeyondTech's own gated admission process, application, review and fit interview [W06], assumption [PLAN.md 5.3]
A10	Mock placement drive participants per drive	100	200	350	Unstop DTU event counts from Lane B, assumption [PLAN.md 5.3]
A11	Meta CPL for a campus-geofenced student audience (₹)	600	350	200	Multiple India ad-benchmark publishers, 2026, figures vary by source; a single pinned CPM was retired per ruling F-C1, assumption [PLAN.md 5.3, conflicts.md F-C1]
A12	LinkedIn CPL (₹)	1,500	900	500	Confirmed India general CPC range plus a narrower education-specific sub-range from Lane F, assumption [PLAN.md 5.3, conflicts.md F-C2]
A13	Paid lead to application conversion	3%	6%	10%	Colder than event leads per Lane F's channel research, assumption [PLAN.md 5.3]
A14	Ambassador-sourced enrolments per ambassador per season	2	4	7	Coding Ninjas and Internshala ISP benchmarks from Lane G, corrected to roughly 1,000 ambassadors not 4,000+ per ruling G-C1, assumption [PLAN.md 5.3, conflicts.md G-C1]

ID	Assumption	Bear	Base	Bull	Basis
A15	Ambassador payout per enrolment (₹)	1,500	1,000	750	About 8% of the base fee, cross-checked against a comparable RiseUpp payout of ₹5,000 per enrolment [RG06], assumption [PLAN.md 5.3]
A16	Referral reward per enrolment, split giver and joiner (₹)	1,500	1,000	500	Policy choice, not independently benchmarked, assumption [PLAN.md 5.3]
A17	Founding cohort size per new campus	12	20	30	Sized to one mock-interview panel's practical capacity, assumption [PLAN.md 5.3]
A18	Founding cohort discount	50%	40%	30%	A trust-purchase policy choice, consistent with BeyondTech's own price-ladder precedent on Topmate [W16], assumption [PLAN.md 5.3]
A19	Founding cohort selection rate into non-tech offers	25%	40%	55%	Set below DTU's own implied rate because the playbook is new on that campus, assumption [PLAN.md 5.3]
A20	Season 2 enrolments per new campus as a multiple of founding cohort	1.5	3.0	5.0	Proof-loop strength, a policy judgment about how fast local word of mouth compounds, assumption [PLAN.md 5.3]
A21	Cost of one co-branded case league per campus (₹): prize pool, society fee, creatives	60,000	45,000	30,000	BeyondTech's own current case competition with DCG carries a ₹40,000-plus prize pool [W15], assumption [PLAN.md 5.3]
A22	Founder hours per enrolment today	3.0	2.0	1.5	The fit interview plus WhatsApp chat plus callback sales motion [W06, W11], assumption [PLAN.md 5.3]
A23	Founder hours per enrolment after the plan	1.2	0.8	0.5	Group information sessions, alumni interviewers and a published price band replacing 1:1 screening, assumption [PLAN.md 5.3]
A24	Gross margin on fee after mentor and tool cost	55%	65%	75%	A live cohort run with part-time mentors, a standard cohort-course margin structure, assumption [PLAN.md 5.3]
A25	Campus micro-influencer cost per post (₹), nano (under 10,000) to micro (10,000 to 100,000) followers	4,000	2,500	1,500	Lane F's rate-card research, bands recalibrated from the original 5,000/20,000 split to the real nano/micro convention per ruling F-C4, assumption [PLAN.md 5.3, conflicts.md F-C4]
A26	Share of leads captured after gating the 8 PDFs and the sampler	20%	35%	50%	Standard gated-content capture benchmarks; no bootcamp-specific or India-specific source was found, flagged low confidence per ruling F-C5, assumption [PLAN.md 5.3, conflicts.md F-C5]
A27	Monthly organic visitors to the resources page	300	600	1,200	Unknown; flagged low confidence, no comparable public benchmark found, assumption [PLAN.md 5.3, conflicts.md F-C5]
A28	Second-year share of DTU acquisitions after the plan	10%	20%	30%	A target, not a forecast, assumption [PLAN.md 5.3]
A29	Selection rate of enrolled DTU students into a non-tech offer	35%	45%	60%	Derived from the brief's own "50+ selections" figure against A04, assumption [PLAN.md 5.3]
A30	Upsell revenue per student (Topmate, off-campus track) (₹)	0	300	800	BeyondTech's own Topmate price ladder [W16], assumption [PLAN.md 5.3]
A31	Founder hours per week	15	20	25	Model-added input filling a genuine gap, not logged as a conflict since nothing disagreed; basis recorded in model_tables.md T16, assumption [WRITER-BRIEF locked numbers]
A32	Cohorts run per year	2	3	4	Model-added input, same basis as A31, assumption [WRITER-BRIEF locked numbers]
A33	DTU in-house event cash cost (₹)	12,000	8,000	5,000	Model-added input, same basis as A31, assumption [WRITER-BRIEF locked numbers]
A34	Paid-channel reachable share of campus population	3%	5%	8%	Model-added input, same basis as A31, assumption [WRITER-BRIEF locked numbers]

24.2 Reading the register

The register is organised, deliberately, so that every number anyone might quote from this document traces back to one row here. Where a number changes (for example, if the founder later discloses the actual program fee rather than the A01 bracket), the correct fix is to replace that one row's bear, base and bull values and re-run the model, which per PLAN.md's own build workflow propagates the change through every table from T1 to T16 automatically rather than requiring a manual grep across every slide. Nine of the thirty-four rows carry an explicit low-confidence flag in their basis column (A02, A26 and A27 most sharply; A06, A10, A25 to a lesser degree

because they rest on Lane F and Lane B benchmarks rather than BeyondTech's own data), and this document's own content-integrity rule (PLAN.md section 2.1) is why those flags are stated here rather than smoothed into a false sense of precision.

25. Slide blueprint

Answer. The deck runs 12 slides: a cover, 9 core slides, an appendix and a thank-you, each one summarised below with its action-title template, the exhibits it carries and which research-document section it draws from [PLAN.md section 14.4]. The ribbon across the 9 core slides reads SUMMARY, DIAGNOSE (shared by slides 3 and 4), DTU PLAN (shared by slides 5 and 6), PICK, LAUNCH (shared by slides 8 and 9) and PROVE IT, so the ribbon itself becomes a second, shorter read of the whole argument. No slide repeats another's architecture: the deck moves between a mind-map cover, an SCQA summary, a funnel-and-issue-tree diagnosis, a persona-and-heat-map student slide, a channel-and-Harvey-ball plan slide, a moneyshot budget slide, a heat-grid scorecard, a map-and-ladder launch slide, a Gantt-and-flywheel machine slide and a roadmap-and-risk closing slide.

25.1 The 12 slides

Slide	Ribbon position	Title template	Key exhibits	Source section
1, Cover	No ribbon	"From a DTU habit to a Tier-1 system" (fixed title, Poppins ExtraBold) with the governing thought and the moneyshot in a verdict card	Hub-and-spoke mind map (BeyondTech hub; inner ring of existing proof, recruiters, DCG and the WhatsApp/LinkedIn engine; outer ring of the 4 pick crests with Fit scores); the Members, Institution, Role team table	Section 2 (the answer on one page); section 15 (the four picks)
2, Executive summary	SUMMARY, 1/9	"BeyondTech can add 55 DTU students and four new campuses in twelve months on about ₹5.3 lakh by distributing proof, not buying awareness" [M T2, T6, T12]	SCQA strip quoting the brief verbatim [B10, B11, B13]; two mirrored pillar cards (Deepen DTU, Launch at Four); a five-tile answer strip (enrolments, CAC, organic share, payback, founder hours freed); a DO/DO NOT pair of the contrarian moves	Section 2 (the answer on one page)
3, Diagnosis	DIAGNOSE, 2/9	"Recall is strong but only about 5.6% of DTU's non-tech pool enrols (M T2), because five breaks sit between hearing of BeyondTech and paying"	The DTU funnel today (T1, T2); the five-leak issue tree with evidence chips [W06, W08, W11, W13, W14]; three real artefacts (the open Drive links, the admission steps, the ambassador-versus-intern-post bar chart); founder hours per enrolment today (T11)	Section 9 (where the DTU engine leaks); section 8 (DTU in numbers)
4, The student	DIAGNOSE, 3/9	"Four kinds of DTU student need this course in three different months, and BeyondTech sells in one"	Four persona cards; the intent heat map by year of study and month; a table mapping recruiter rounds to BeyondTech's four phases; a commentary panel with bold-keyword bullets; the student-voice coverage honesty chip if fewer than 15 quotes support it	Section 6 (the student, four segments, three buying windows)
5, DTU plan	DTU PLAN, 4/9	"Eleven channels in three layers reach DTU's non-tech pool before the 15 January batch, with societies and a mock drive doing the heavy lifting"	The target funnel with channel cards per tier; the society partner table (6 rows); channel attractiveness Harvey balls on reach, cost, trust and founder time; a month strip, October 2026 to January 2027, with four dated activations	Section 10 (the DTU society map); section 11 (the DTU plan, eleven channels)
6, DTU budget and economics	DTU PLAN, 5/9 (holds the moneyshot)	"₹3,51,650, 21.1% organic: the split is what falls out when channels are funded cheapest first"	The moneyshot band (section 2's locked sentence) with three gold-divided stats; the 100% split bar and CAC bar chart sorted ascending with a "funding stops here" marker; the budget table, channel by channel; a three-scenario bar set (T6); the blended-CAC formula callout; the fee-sensitivity chips (T15)	Section 12 (the DTU budget)
7, College selection	PICK, 6/9	"BITS Pilani (Pilani campus), NIT Tiruchirappalli, PEC Chandigarh and COEP Technological University, Pune top a seven-criterion scorecard of 32 colleges, and hold their place in 97.2% or more of 2,000 re-weightings"	The heat grid (top 12 colleges plus the 4 calibration campuses plus the best-scoring IIT as a contrast row); the Fit-score formula callout; the screen as a small funnel; the stability bars; four one-line reasons each with two numbers; the "CONCLUSIVELY" closing card	Section 14 (the scorecard); section 15 (the four picks)
8, Pan-India launch	LAUNCH, 7/9	"Each new campus is entered in four steps: borrow a society's trust, seed 20 students, earn offers, then hand over to ambassadors who were customers first"	The India map with 4 existing-campus pins and 4 pick pins, leaders to identical city cards; the trust ladder as rising pillars with the named mechanism under each step; a symmetric table, one row per pick (host society, wedge, anchor recruiters, season month, founding-cohort size)	Section 17 (trust from zero); section 16 (pick dossiers)

Slide	Ribbon position	Title template	Key exhibits	Source section
9, The launch machine	LAUNCH, 8/9	"One campus's case league costs ₹45,000 (base case) and nets ₹99,000 in season 1 cash after the founding cohort pays its discounted fee, so the campus pays back in season 1; the ambassador flywheel takes over from week 9"	The 90-day Gantt with five workstreams and the day-30, day-60, day-90 gates as diamonds; the ambassador flywheel with conversion numbers on the wires; the per-campus P&L table for seasons 1 and 2 with a cumulative-cash line and a dashed break-even marker; the ambassador incentive ladder in rupees	Section 18 (the 90-day launch playbook); section 19 (the ambassador flywheel); section 20 (economics of expansion)
10, Roadmap, measurement, risks and the first step	PROVE IT, 9/9	"Two waves take BeyondTech to five more campuses by September 2027; three numbers at day 60 decide whether a campus scales, holds or stops"	The pathway roadmap, five stops from October 2026 to September 2027; the KPI tree and target table (T13) with the stop/hold/scale rule as a three-box flow; the risk heat map with a 1:1 mitigation list; the claims we can and cannot make pair; the "THEREFORE" closing card and a dated first step	Section 21 (the roadmap); section 22 (measuring it); section 23 (risks and rules)
11, Appendix	Own ribbon, counter A1	"Every number traces to a named source, the college dataset or one stated model, and each assumption below can be changed"	The full scorecard for all scored colleges, two columns at 22pt; the assumptions register (A-ID, bear, base, bull, basis); the sensitivity tornado and model summary table; the bibliography panel at 14pt; a method-limit chip naming desk research only	Section 24 (assumptions register); section 27 (method, limits and validation); Appendix A to F
12, Thank you	No ribbon	"THANK YOU"	The same Members, Institution, Role team table as the cover; one line pointing to the research document	n/a (standing cover and thank-you convention)

Ribbon tag	Slides it covers	Section it argues
SUMMARY	2	Section 2, the answer on one page
DIAGNOSE	3, 4	Sections 8, 9, 6
DTU PLAN	5, 6	Sections 10, 11, 12
PICK	7	Sections 14, 15
LAUNCH	8, 9	Sections 16 to 20
PROVE IT	10	Sections 21 to 23
Own ribbon (counter A1)	11 (appendix)	Section 24, Appendix A to F
No ribbon	1 (cover), 12 (thank you)	n/a

25.2 How the blueprint reads as one argument

Read top to bottom, the 12 titles alone (the ghost-deck test the skill's touchpoint B runs at Gate G5) already carry the argument: recall is strong but the engine leaks (slide 3), four kinds of student need the course in three different months BeyondTech does not currently sell in (slide 4), eleven channels fixed can reach more students cheaply (slide 5), the budget split is an output not a guess (slide 6), four colleges survive a seven-criterion test and hold their rank under re-weighting (slide 7), each one is entered through borrowed trust rather than an ad budget (slide 8), one campus pays back in season 1 (slide 9), and three numbers at day 60 across two waves decide whether the whole second half of the plan scales (slide 10). Every number named in a title (the budget figure, the pick names, the campus cost, the stability percentage) is drawn directly from the model tables cited in its row above, so a reader checking the deck against this document finds the same figure in both places by construction, not by a separate reconciliation pass.

26. Anticipated judge questions

Answer. Twenty questions below are the ones most likely to surface given the organiser playbook's own rules [P01 to P12, case/03-organiser-playbook-digest.md] and the genuine tensions this research surfaced rather than papered over: the F2 screen relaxation, the Prism identity gap, the bear-scenario CAC spike, why no IIT reached the final four, why BITS Pilani Goa scored higher than two of the four actual picks, the thin societies.csv coverage, and the desk-only research method. Each question is answered in three sentences and points to the specific table or dossier that backs the answer, so a judge can verify the claim on the page rather than take it on the deck's word.

The panel will ask: "Why not just target the IITs, they already draw these recruiters?" The scorecard shows every contrast-set IIT scoring lower than all 4 locked picks on Fit: IIT Delhi scores 2.15, IIT Roorkee 2.20, both below PEC Chandigarh and COEP's 2.40 [M T8]. The reason is not recruiter overlap, where IITs score reasonably, but prep vacuum (C5) and calendar fit (C6): IIT Delhi and IIT Roorkee both score band 1 on C6, the worst band, because their placement calendars sit furthest from BeyondTech's 15 January batch start, and the "IITs win recruiter overlap, lose prep vacuum" framing only half-confirmed under research (C5 came back murky for every IIT checked, including a later dossier pass finding DMS-level consulting and finance clubs of unconfirmed undergraduate reach at IIT Delhi) [conflicts.md, late corrections]. No IIT was engineered out and none was engineered in; section 14.6 of the scorecard shows the full working.

The panel will ask: "Why does BITS Pilani Goa, with a higher Fit score than two of your four picks, not make the cut?" BITS Pilani Goa scores Fit 2.80, genuinely higher than PEC Chandigarh and COEP's 2.40 each [M T8], and its exclusion is not a data judgment, it is a portfolio rule: the picking rule caps the plan at one campus per multi-campus institute, and BITS Pilani (Pilani campus) already holds the top Fit score in the whole longlist at 3.00 [PLAN.md section 7.5, step 3]. This is stated plainly as the reserve bench's first entry with the single criterion that would promote it (dropping the one-campus-per-institute rule), not hidden behind a reweighted score. Section 15 reports this explicitly rather than letting a reader discover it by cross-checking the numbers themselves.

The panel will ask: "Why was the anchor-recruiter screen relaxed from 5 to 4?" Because only 2 non-IIT colleges passed the screen at the stricter 5-recruiter threshold, which would have left the plan unable to name 4 picks at all [M T8; PLAN.md section 4.6's own falsification rule]. The relaxation is logged, not hidden, and section 14 states it as evidence of a rule-bound process reacting to what the data actually showed, not as a quiet fudge to hit a target count. All 4 locked picks still pass the relaxed screen on their own official or aggregator-confirmed recruiter lists, not merely on the relaxation existing.

The panel will ask: "What is 'Prism', and why isn't it in your scorecard?" Prism is a recruiter named in the brief's own NSUT results row [B06], and it could not be identified as a specific company after 6 search attempts across two research lanes, including checks against PrismHR, Prism Johnson, Prism Consulting Group Singapore and a Prism hospitality listing, none of which matched [C-C1, conflicts.md]. The name is quoted exactly as the brief states it wherever NSUT's recruiters are listed, with no expansion and no inferred identity, and it is never added to the fixed 20-firm anchor list or counted in any college's recruiter-overlap score, because an unverifiable name cannot be checked against any other college's recruiter list. This is a disciplined gap, not a silent drop: the brief's own fact is preserved verbatim.

The panel will ask: "Your bear-case CAC is ₹16,540, nearly 8 times your base case. Doesn't that break the plan?" It would, if the bear case were a second budget option, but it is a stress test the model runs specifically to show why the kill-and-scale thresholds in T14 exist [M T6]. Bear-case conversion rates compound badly across several funnel stages at once (event turnout, lead-to-application, application-to-enrolment all sliding to their weakest value simultaneously), which is why the bear scenario shows a –₹14,56,811 contribution even while spending ₹19,84,811, far more than the base case's ₹3,51,650 [M T6]. The plan never recommends the bear-case spend level; T14's day-30, day-60 and day-90 gates exist precisely to catch a campus sliding toward this scenario before that much cash is committed.

The panel will ask: "Why is the DTU budget split 78.9% paid, when your own argument is organic-first?" The split is an output of funding every channel cheapest-first until the season's enrolment target is met, not a target chosen in advance [M T4]; 7 of the 11 channels are organic and all 7 get funded in full, while only 2 of the 4 paid channels (Meta retargeting and campus micro-influencers, the two cheapest paid options at ₹3,889 and ₹309 CAC) are funded at all, with Meta geofence prospecting and LinkedIn school-targeted funded at ₹0 each [M T3, T4]. The 78.9% paid share is almost entirely Meta retargeting of warm audiences, people who already touched an organic activation, which is consistent with, not contradictory to, the organic-first mechanism the plan argues for.

The panel will ask: "Your DTU fee is an assumption. How can a budget plan stand on an unpublished number?" BeyondTech's own site shows an application, review, fit interview and enrolment fee flow with no price displayed anywhere [W06], so the fee genuinely is not public, and the plan treats it as assumption A01 with a bear, base and bull bracket (₹8,000, ₹12,000, ₹18,000) rather than guessing a single figure A01. The sensitivity tornado in T7 shows fee is by far the largest lever on DTU contribution (a swing of ₹10,72,500, more than double the next-largest driver), and the price-sensitivity table T15 gives the breakeven enrolment count at each of the three price points so the plan is legible at any fee BeyondTech actually sets. If the founder discloses the real fee, exactly one row in the assumptions register changes and every table from T1 to T16 re-runs against it.

The panel will ask: "What if the founder can't actually free up those 88 hours?" Then Season 1's launches should not open on schedule, and the risk register names this explicitly as risk 2, founder overload, with a stated mitigation: track month-3 founder hours against the 132-hour DTU target directly, rather than assuming the fix landed [M T11; section 23.1, row 2]. The model's own arithmetic shows the plan only nets a positive 24-hour reduction if DTU's fix lands before any new campus opens; if it slips, the founder would carry the old 220-hour DTU load and the new 64-hour campus load at once, a real but survivable 284 hours against the 1,040-hour annual capacity A31, and the sequencing in section 21 exists to prevent that stacking from ever being tested in practice.

The panel will ask: "You rely on anonymous Quora and Reddit quotes. How is that credible evidence for a DTU-specific plan?" It is not used as DTU-specific evidence: of 37 verified quotes, only NSUT (6) and NIT Surathkal (2) are tied to a named campus, DTU itself yielded zero quotes under the lane's platform rules, and the document states this plainly rather than implying broader coverage than the research actually produced [I-R1, conflicts.md]. Where DTU-specific student sentiment is needed, the document draws instead on BeyondTech's own 5 named, consenting testimonials [A-C6, conflicts.md] and the named, dated 180 Degrees Consulting DTU Substack

interview [I-R2, conflicts.md], a stronger evidence class than an anonymous platform quote. The anonymous quotes are used only where the document explicitly frames them as general engineering-student sentiment, never dressed up as DTU-specific findings.

The panel will ask: "Only 16 of your targeted 30 DTU societies have real data. Doesn't that undercut your society-partnership plan?" The society partner shortlist (section 10, slide 5) is built from the 6 best-evidenced rows (180DC DTU, DCG, E-Cell DTU, Society of Robotics DTU, IEEE DTU, ASSETS DTU), not an average across all 30 target rows, so the thin coverage affects the register's completeness, not the shortlist's credibility [societies.csv; conflicts.md gap]. The 8 bare-name societies with no public data (Enactus, Round Table, Kalakriti, AIMS, Semicon, EMCEE, ACM, Deb Soc) are listed honestly as gaps rather than silently dropped, and risk 6 in the register commits to one more targeted search pass before the activation calendar locks. A thin dataset that says so is a different, more defensible thing than a complete-looking dataset that is quietly half-estimated.

The panel will ask: "Why does BeyondTech never use a guarantee claim, when CrackNonTech runs a '100% Placement Guarantee or Full Refund'?" Because the CCPA's 2024 coaching guidelines and ASCI's education-sector clauses both point toward barring or qualifying guaranteed-outcome claims, even though every clause cited here traces to a secondary summary rather than the primary regulation text, which could not be fetched as readable content [RH08, RH09, RH23, RH24; H-C1, conflicts.md]. Section 23.2's claims table states this as the conservative, defensible posture rather than a settled legal finding, and separately, a guarantee claim BeyondTech cannot actually deliver (its own public figures show "50+ selections," not 100% placement) would risk exactly the kind of overclaim the organiser playbook flags as the costliest kind of mistake a team can make [P12, playbook mistake 10]. Choosing not to guarantee is therefore both the more defensible compliance posture and the more honest marketing claim given BeyondTech's own numbers.

The panel will ask: "Your compliance section rests on secondary sources, not the primary CCPA or ASCI text. Isn't that a weak foundation for a 'claims we can/cannot make' table?" Yes, and the document says so directly: every CCPA and ASCI clause in Lane H's research is sourced to a law-firm or news summary because the primary PDFs returned as image-based or binary content with no extractable text after repeated fetch attempts [research/raw/R-H-rules.md, preamble note]. The claims table is framed explicitly as a conservative working guide, not a legal opinion, and the recommendation to any claim BeyondTech actually intends to publish is to check it against the primary text first, a limitation named in the risk register (row 12) rather than glossed over.

The panel will ask: "Why NIT Tiruchirappalli over NIT Warangal, when both are strong South-region NITs?" NIT Tiruchirappalli clears the screen with a Fit score of 2.65 and holds in 100.0% of 2,000 stability draws, while NIT Warangal scores 2.20 and holds in 0.0% of the same draws, meaning Warangal's position in any top-4 list depends entirely on the exact weights chosen, not on a dependable underlying signal [M T8, T9]. The practical difference is C4 (society surface) and C2 (non-tech offer depth), where Trichy's confirmed 4-club non-tech cluster (180DC, ProfNITT, SIGMA, plus Product Folks and DataByte found at the dossier stage) outscores Warangal's thinner confirmed society evidence. NIT Warangal sits on the reserve bench, not discarded, and would be the next substitute if a Season 2 pick needed replacing.

The panel will ask: "How does the organic-to-paid split qualify as an insight rather than just an output label?" Because the mechanism generating the split, funding channels cheapest-first until target is met, is itself the insight: it shows that the two cheapest paid channels (Meta retargeting at ₹3,889 and influencers at ₹309) already clear the season target before the two more expensive paid channels (Meta geofence at ₹12,963, LinkedIn at ₹33,333) are needed at all [M T3, T4]. That is a specific, falsifiable claim about BeyondTech's own channel economics, exactly the kind of outside-in exhibit the organiser playbook rewards (one new thing the founder did not already know) [P01], not a restatement of the brief's own suggestion to split budget between organic and paid [B15].

The panel will ask: "Why does the ambassador flywheel start in season 2, not season 1, when ambassadors are cheaper than a case league?" Because an ambassador with no local result has nothing to point at: the research found BeyondTech's own prior ambassador recruitment post on LinkedIn drew about 15 reactions against 269 for an unrelated internship post, an 18-times gap showing students respond to career upside, not brand duty, when there is no proof behind the ask [W13, W14]. The four-step trust ladder (borrow, seed, earn, hand over) seeds a founding cohort first specifically so that season 2's ambassadors are recruited from students who already have their own offer story to tell, consistent with the mechanism named in section 17 and the two confirmed third-party quotes on trust preceding paid acquisition [RG63, RG64].

The panel will ask: "A –₹15,91,211 contribution in the bear case across all five campuses, isn't that a dealbreaker?" No, because the bear case is a stress test of what happens if every funnel stage across every campus underperforms simultaneously, and the T14 kill thresholds exist precisely to stop that compounding before it reaches full-season scale [M T12, T14]. The base case, the one the plan actually recommends funding, shows a positive ₹11,29,750 contribution on ₹5,31,650 of spend across all five campuses, and the bull case shows ₹38,22,778 [M T12]; the bear case's role in this document is diagnostic, showing exactly which numbers to watch (day-30 applications, day-60 fill, day-90 offers) so the plan never actually operates at bear-case spend levels for long.

The panel will ask: "How did you size DTU's non-tech addressable pool without official branch-wise intake data?" The model builds SAM bottom-up from DTU's officially sourced sanctioned intake [RB01] times an assumed non-tech-open share (A03, bear 20%, base 30%, bull 40%), producing a range of 1,304 to 2,608 students rather than a single unverifiable figure [M T1]. Where the research could not pin branch-wise intake with certainty, the plan follows its own falsification rule and presents the figure as a range, never a false-precision point estimate, and the base-case SAM of 1,956 implies a current penetration of about 5.6%, consistent with the brief's own "50+ selections" claim once run through the model's own selection-rate assumption [M T2, A29].

The panel will ask: "What happens if a host society just stops being active?" Section 4.6's own falsification rule covers exactly this case: if a recommended society turns out inactive, it is replaced with the next society in the relevant dataset by reach, not papered over [PLAN.md section 4.6]. For the 4 new-campus picks specifically, each dossier names at least one alternative non-tech society found during research (for example BITS Pilani's Finomaniac or Quant Club alongside its primary 180DC wedge) [RE23, RE26, R-E-bits-pilani.md], and the risk register's row 1 mitigation commits to a signed, dated agreement precisely so a lapse is detected through a missed renewal date, not discovered mid-season.

The panel will ask: "Is your desk-research-only method really sufficient for a go-to-market recommendation this specific?" No single piece of desk research substitutes for a conversation with an actual applicant, which is why section 27 states plainly that no survey or interview was conducted, a decision made deliberately rather than by default, and pairs that honesty with a fully designed Customer Validation Plan (a 14-question survey and a 6-question interview guide) ready to run before any campus launch locks its final numbers [section 27]. The model's own three-scenario structure (bear, base, bull) throughout this document exists specifically because desk research alone cannot pin a single-point forecast, and the plan is built to be falsified and corrected by the first real data point from each channel, not to be right on the first try.

The panel will ask: "Why does IIT Delhi sit on your reserve bench with a stability of 0.0%, and what would it take to promote it?" IIT Delhi passes the basic screen (Fit 2.15) but loses every one of 2,000 re-weighted draws of the final-4 test, meaning no plausible adjustment of the model's own criterion weights would place it in the top 4 under this plan's scoring logic [M T8, T9]. Promoting it would require either dropping the calendar-fit criterion (C6) entirely, where IIT Delhi scores the worst band, or discovering material new evidence on its prep vacuum (C5), which the research found murky rather than confirmed one way or the other [late corrections, conflicts.md]; absent either change, IIT Delhi remains the weakest of the four reserve-bench colleges, behind BITS Pilani Goa, NIT Warangal and IIT Roorkee in that order.

26.1 Index: which table backs which question

#	Question theme	Table or dossier that backs the answer
1	IITs and recruiter overlap	T8 (scorecard), late corrections (prep-vacuum nuance)
2	BITS Pilani Goa's exclusion	T8, T9, PLAN.md section 7.5 step 3 (portfolio rule)
3	F2 screen relaxation	T8 (screen pass column), PLAN.md section 4.6
4	The Prism gap	C-C1 (conflicts.md), case brief B06
5	Bear-case CAC spike	T6, T14
6	Organic-first versus 78.9% paid	T3, T4
7	The fee assumption	A01, T7, T15
8	Founder-hours risk	T11, section 23.1 row 2
9	Anonymous student quotes	I-R1, I-R2 (conflicts.md)
10	Thin societies.csv	societies.csv, conflicts.md gap
11	Guarantee claims versus CrackNonTech	R-H-rules.md section 23.2
12	Secondary-sourced compliance basis	R-H-rules.md preamble, H-C1
13	NIT Trichy versus NIT Warangal	T8, T9
14	The organic-to-paid split as insight	T3, T4
15	Ambassadors in season 2, not season 1	W13, W14, section 17
16	Bear-case 12-month contribution	T12, T14
17	DTU SAM sizing without branch data	T1, A03, RB01
18	A lapsed host society	PLAN.md section 4.6, dossier alternates
19	Desk-research-only method	Section 27, Customer Validation Plan
20	IIT Delhi's 0.0% stability	T8, T9, late corrections

27. Method, limits and the validation we would run next

Answer. This document is built entirely from desk research: nine verifier lanes, three college-data scorers and eight per-pick dossiers, tallying 397 distinct sources across official, regulator, company, news, aggregator, blog and forum tiers, with no survey and no interview conducted at any stage [research/raw/sources.md]. That is a deliberate choice, made by the user before research began, not a shortcut taken under time pressure, and this section states the choice plainly alongside every fact that could not be verified. In its place sits a fully designed Customer Validation Plan, a 14-question survey and a 6-question interview guide with target response counts by segment, ready to run before any new-campus launch locks its final numbers, and each question below is tied to the specific assumption or decision it would change.

27.1 Source-tier tally across all lanes

Source type	Count	Share	What it covers
Aggregator	145	36.5 %	Collegedunia, Shiksha, Careers360, Getmyuni and similar college-data and competitor-pricing pages; the single largest tier, and every figure resting on it alone is labelled "aggregator-reported" in this document
Blog	65	16.4%	Company blogs (Coding Ninjas, NextLeap), law-firm commentary on the CCPA and ASCI guidelines, and ad-benchmark publisher posts
Company	55	13.9%	BeyondTech's own site and LinkedIn, competitor sites (CrackNonTech, NextLeap, PrepLounge, StrataScratch), and recruiter or institute pages fetched directly
News	41	10.3%	Careers360, Inc42, Business Today, Storyboard18 and similar national or trade press
Official	60	15.1%	Institute NIRF submissions, official placement-cell pages and statistics PDFs, BITS Pilani's own University Statistics PDF, PEC's Dean of Academic Affairs letters
Forum	29	7.3%	Reddit, Quora and LinkedIn comment threads, almost entirely Lane I's student-voice research
Regulator	2	0.5%	CCPA and ASCI secondary summaries; no primary regulator text was independently fetched as readable content
Total	**397**	**100%**	research/raw/sources.md

The tier mix matters more than the raw count. The scorecard's own source hierarchy (PLAN.md section 6.2) ranks official sources above aggregators, and the 60 official-tier sources carry the weight on every number this document treats as near-certain: DTU's own NIRF submission for the graduated/placed/median triplet [RB07], BITS Pilani's own University Statistics PDF for its recruiter list S409, PEC's own Dean of Academic Affairs letters for its internship calendar [RE02, RE03]. The 145 aggregator-tier sources, more than a third of the total, are why so many figures in this document carry an explicit "aggregator-reported" label rather than being presented as settled fact; aggregators are useful for breadth (branch-wise averages, highest packages, recruiter name lists) precisely where official documents go silent, but the research never upgrades an aggregator figure to the same confidence as an official one.

27.2 What could not be verified

Item	Status	Where it matters
DTU's branch-wise B.Tech intake by year	NOT FOUND after Lane B's searches; the model uses the officially sourced total sanctioned intake [RB01] with an assumed non-tech-open share (A03) rather than a confirmed branch breakdown	T1 (DTU addressable funnel)
A 25-plus-firm non-tech recruiter detail table (firm, role, CTC, branch, CGPA, month, offers) for DTU specifically	NOT FOUND; what exists is recruiter names from three separate aggregators [RB18, RB20, RB27] and separate, non-DTU-specific role and process detail from Lane C	Section 8 (DTU in numbers), combines the two lanes explicitly rather than implying DTU-specific process detail that was not actually confirmed
The official DTU 2026-27 academic and placement calendar, and Engifest, Invictus and Yuvaan 2026-27 dates	NOT FOUND; the model uses one dated anecdote (ECE mid-terms, late September, est.) plus the commonly cited 1 August placement-season start, both marked est.	Section 11 (the DTU plan), section 21 (the roadmap)
"Prism"'s identity as a specific company	NOT FOUND after 6 search attempts across two lanes	Quoted verbatim per B06, never scored
CrackNonTech's current price and NextLeap's PM Fellowship EMI	Both NOT FOUND or unconfirmable on the live sites as of the access date; seeds F08 and F09 retired	Section 7 (competition); neither figure is cited anywhere in this document

Item	Status	Where it matters
Most DTU-and-new-campus non-tech society follower counts	NOT FOUND for the large majority: 8 of 30 target DTU societies have no public data at all, and every named society at PEC and COEP (EIC, Consulting Club, Finance Club Committee) returned no follower count after 3 searches each	Section 10 (DTU society map), section 16 (pick dossiers); the activation calendar and entry wedges proceed on the named role and confirmed activity, not on an assumed reach number
A DTU-specific precedent for an external brand partnering with a DTU society (distinct from the BeyondTech x DCG competition itself)	NOT FOUND; the only confirmed example is the subject of this research, not an independent precedent	Lane G's national-level precedents (Coding Ninjas, Internshala, Facebook, Tinder) substitute, scoped broadly enough to compensate

27.3 The honest statement

No survey and no interview was conducted anywhere in this research. This was the user's own decision, made explicitly on 9 October 2026 before any lane opened, stated in the plan as "desk research only," not a gap the team ran out of time to close [PLAN.md section 1, decisions table]. Every student-voice quote used in this document is either a verbatim, platform-attributed public quote gathered under Lane I's rules, or one of BeyondTech's own 5 named, consenting testimonials, or the single named, consenting, published 180 Degrees Consulting DTU Substack interview; none is an interview this team conducted, and none is paraphrased into a quotation mark that looks like one. Where a number in this document rests on an assumption rather than a measured fact, it carries its A-ID and the word "assumption" once per paragraph, precisely so a reader never mistakes a modelled bracket for a confirmed figure.

27.4 The Customer Validation Plan

The plan below is designed to run before Season 1's founding cohorts lock their final numbers (section 21, month 3 to 4), and is scoped to three segments: DTU's own current students, DTU's non-enrolled aspirants (students who have heard of BeyondTech but not enrolled), and the 4 new-campus founding-cohort candidates once each campus's case league has run.

Target response counts by segment

Segment	Target responses	Method	Timing
DTU current students (years 2 to 4, all branches)	150	Survey, distributed through the society partner shortlist (section 10) and the gated resource library's own download flow	Month 1 to 2 (before the DTU budget's paid channels are funded)
DTU non-enrolled aspirants (students who have heard of BeyondTech but not applied)	80	Survey, distributed through the structured referral channel and the placement-cell information session sign-up sheet	Month 2 to 3
New-campus founding-cohort candidates (post-case-league, pre-enrolment, across all 4 picks)	40 per campus (160 total)	Survey, distributed at the case-league event itself before founding-cohort applications open	Within the Season 1 and Season 2 launch windows (section 21)
A subset of each segment, for depth	6 to 10 per segment (18 to 30 total)	One-on-one interview, drawn from survey respondents who opt in	Within 2 weeks of each segment's survey closing

The 14-question survey instrument

1. What year of study are you in, and what branch?
2. Have you heard of BeyondTech before today? (yes, no, not sure)
3. If yes, how did you first hear about it? (referral from a friend or senior, a society event, LinkedIn, Instagram, a poster or flyer on campus, other)
4. Have you ever considered preparing for a non-tech role (consulting, product, analytics, business analyst) at a campus placement drive?
5. If you have not enrolled in BeyondTech or a similar programme, what is the main reason? (price uncertainty, timing, did not know such a programme existed, prefer to prepare alone or with seniors, other)
6. Would you be more likely to enrol if the exact fee were published on the website before you had to ask?
7. Which of the following would make you trust a non-tech placement programme more: a named senior's result, a society's endorsement, a free sample class, a money-back policy, other?
8. At what point in your degree would you ideally start structured non-tech placement preparation? (start of 2nd year, start of 3rd year, start of 4th year, only once placements begin)
9. Have you used any of BeyondTech's free resources (the roadmap PDFs or the Guesstimate sampler)? If yes, did you continue to a paid programme afterward?
10. Which companies would you most want help preparing for? (open text, used to cross-check the 20-firm anchor-recruiter list)

11. Would you be willing to recommend a programme like this to a junior if you had a good experience?
12. How much would you expect to pay for an 11-week non-tech placement preparation programme with mentor support? (open numeric, used to recalibrate A01)
13. If you are a 2nd-year student, would you enrol in a placement-prep programme now, or wait until your 3rd year? (used to recalibrate A28)
14. Would you be interested in becoming a campus ambassador for a programme like this, if the ambassador had already been through the programme themselves?

The 6-question interview guide

1. Walk me through the last time you looked for help preparing for a non-tech campus recruiter. What did you try, and what made you stop or continue?
2. When you heard about BeyondTech (or a similar programme), what made you trust it, or what made you hesitate?
3. If BeyondTech published its exact fee on the website tomorrow, would that change anything about how you think about it?
4. Tell me about the role your society (or a senior, or a WhatsApp group) played in how you prepared for placements. Would a formal partnership between that society and a programme like this change anything?
5. What is the one thing a non-tech placement programme could do that would make you recommend it to five juniors, unprompted?
6. If you were offered a founding-cohort discount to join a brand-new version of this programme at your own campus, what would make you say yes versus wait and see?

What each answer would change

Survey question	If the answer shows	The decision it changes
Q12 (expected fee)	A median expectation below ₹8,000	A01's bear-case fee assumption would need to fall below its current ₹8,000 floor, and T15's breakeven enrolment counts would need to be re-run higher
Q13 (2nd-year enrolment intent)	Fewer than 20% of surveyed 2nd-years say they would enrol before 3rd year	A28's 20% second-year-share target (base case) should be revised down, and the KPI tree's month-12 second-year-share target in T13 would need a lower ceiling
Q6 (fee transparency)	A majority say a published fee would make them more likely to enrol	Strengthens the case for the layer-1 DTU fix (publishing a price band) ahead of schedule, potentially moving it earlier than month 3 in section 21's calendar
Q3 (first-heard channel)	A channel other than referral or society events dominates (for example, Instagram)	A05's 80% base-case referral share would need to be revised down and a new channel added to T3
Q7 (trust signal)	Society endorsement outranks a named senior's result or a money-back policy	Strengthens the trust-ladder sequencing in section 17 (borrow before seed) over an alternative sequencing that leads with individual testimonials
Q14 (ambassador willingness, conditional on having been through the programme)	Fewer than the number needed to hit A14's base-case ambassador count per campus	A20's season-2 multiple (3.0x base) would need to be revised down, since the ambassador flywheel depends on enough founding-cohort members being willing
Interview question 4 (society's role)	Students describe a society's role as marginal rather than central to their own preparation	Would weaken the "borrow a society's trust" mechanism (section 17) specifically for that campus and should trigger a review of that campus's chosen entry wedge before cash is committed

27.5 A caveat on this plan's own standing

The Customer Validation Plan above is designed, not run. No response counts exist yet for any question in it, and nothing in this document should be read as if the 14-question survey or the 6-question interview guide has already produced data; where this document cites a survey finding elsewhere (for example, the published India Skills Report figures in section 5), that is a published third-party survey the research lane found, not this plan's own instrument. The gap between a designed instrument and a run one is exactly the gap this section exists to name rather than close by implication.

Appendix A: Bibliography

Sources were opened and checked on 10 October 2026. Only sources cited in the text are listed; the full 421-source register (including sources gathered but not ultimately cited) is `research/raw/sources.md`.

This bibliography resolves every source actually cited in the document: both the rare direct `[S###]` tags and, far more commonly, every lane-file R-ID tag (`[RA12]`, `[RB07]`, etc.), traced through that lane's own Facts table to the Source ID it rests on. The 'Cited via' column shows which R-ID tags resolve to each source (capped at 4, with a count of any more). 203 of 203 resolved sources are listed below; see `research/raw/sources.md` for the full 421-source register, including sources gathered but not ultimately cited in the final text.

Appendix B: Model tables

This file is the single source of truth for every modelled number in the deck and the research document. Generated by `beyondtech_gtm_model.py`. Run: 2026-10-10T13:22:41.

T1 DTU addressable funnel

Scenario	Per-year cohort	TAM (years 2-4)	SAM	SOM	Non-tech share
bear	2608	7823	1304	120	0.2
base	2608	7823	1956	220	0.3
bull	2608	7823	2608	392	0.4

T2 DTU baseline penetration

Scenario	Enrolments today	SAM	Penetration %	Referral share	Implied selection rate	Implied selections	50+ reachable
bear	80	1304	6.14	0.9	0.35	28	False
base	110	1956	5.62	0.8	0.45	50	True
bull	140	2608	5.37	0.7	0.6	84	True

T3 DTU channel plan (base scenario, pre-funding)

Channel	Name	Reach	Enrolments	Cash cost	Founder hours	CAC	Organic
C-ORG-1	Society co-hosted case workshops	300	8.1	₹16,000	12	₹1,975	True

Channel	Name	Reach	Enrolments	Cash cost	Founder hours	CAC	Organic
C-ORG-2	Department and branch representatives	480	10.4	₹8,000	16	₹772	True
C-ORG-3	Mock placement drive	400	10.8	₹16,000	16	₹1,481	True
C-ORG-4	Gated resource library and sampler	1200	15.9	₹2,000	13.2	₹126	True
C-ORG-5	Structured referral with reward	330	9.6	₹19,246	2.9	₹2,000	True
C-ORG-6	Alumni story series on LinkedIn	5400	5.8	₹5,000	12	₹857	True
C-ORG-7	Placement cell information session	200	3.2	₹8,000	6	₹2,469	True
C-PD-1	Meta retargeting of warm audiences	1410	76.1	₹2,96,100	4	₹3,889	False
C-PD-2	Meta prospecting, campus geofence	522	14.1	₹1,82,543	3	₹12,963	False
C-PD-3	LinkedIn school-targeted	313	8.4	₹2,81,637	3	₹33,333	False
C-PD-4	Campus micro-influencers and meme pages	40000	32.4	₹10,000	4	₹309	False

T4 DTU budget and organic/paid split (base scenario)

Total cash: ₹3,51,650. Organic 21.1% / Paid 78.9%. Total funded enrolments: 165.0.

Channel	Funded enrolments	Funded cash	Organic
C-ORG-4	15.9	₹2,000	True
C-PD-4	32.4	₹10,000	False
C-ORG-2	10.4	₹8,000	True
C-ORG-6	5.8	₹5,000	True
C-ORG-3	10.8	₹16,000	True
C-ORG-1	8.1	₹16,000	True
C-ORG-5	9.6	₹19,246	True
C-ORG-7	3.2	₹8,000	True
C-PD-1	68.8	₹2,67,405	False
C-PD-2	0.0	₹0	False
C-PD-3	0.0	₹0	False

T5 Month-by-month calendar (base scenario, Oct 2026 to Sep 2027)

Month	Spend	Enrolments
Oct26	₹28,132	13.2
Nov26	₹31,648	14.8
Dec26	₹14,066	6.6
Jan27	₹49,231	23.1
Feb27	₹35,165	16.5
Mar27	₹24,616	11.6
Apr27	₹21,099	9.9
May27	₹17,582	8.2
Jun27	₹24,616	11.6

Month	Spend	Enrolments
Jul27	₹42,198	19.8
Aug27	₹45,714	21.4
Sep27	₹17,582	8.2

T6 DTU scenarios: bear, base, bull

Scenario	Enrolments	Revenue	Spend	Blended CAC	Payback (cohorts)	Contribution	Organic %
bear	120.0	₹9,60,000	₹19,84,811	₹16,540	3.76	-₹14,56,811	4.2
base	165.0	₹19,80,000	₹3,51,650	₹2,131	0.27	₹9,35,350	21.1
bull	210.0	₹37,80,000	₹26,222	₹125	0.01	₹28,08,778	77.1

T7 Sensitivity tornado on DTU contribution (base contribution ₹9,35,350)

Assumption	Contribution at bear	Contribution at base	Contribution at bull	Swing
A01_fee_inr	₹5,06,350	₹9,35,350	₹15,78,850	₹10,72,500
A09_application_to_enrolment	₹6,20,932	₹9,35,350	₹10,89,351	₹4,68,419
A11_meta_cpl_inr	₹7,44,346	₹9,35,350	₹10,50,752	₹3,06,406
A08_lead_to_application	₹8,59,011	₹9,35,350	₹10,49,858	₹1,90,847
A26_gated_capture_rate	₹9,08,890	₹9,35,350	₹9,61,810	₹52,920
A06_event_registrants	₹9,20,650	₹9,35,350	₹9,56,350	₹35,700
A14_ambassador_enrolments_per_season	₹9,35,350	₹9,35,350	₹9,35,350	₹0

T8 College scorecard: Fit score, screen result and rank

F2 relaxed from 5 to 4 anchors per PLAN.md 4.6: True. Longlist median Fit (excluding calibration): 2.15. Calibration campuses at or above median: True.

College	Region	Fit	Screen pass	C1	C2	C3	C4	C5	C6	C7

Appendix C: College dataset

The full 32-row college scorecard dataset. Each college lists its raw C1 to C7 values, sources and notes exactly as gathered by the regional scorers and refined by the Gate G2 targeted-rescue pass. Scored (1 to 5) values and Fit scores are in Appendix B, table T8.

DTU

- **city:** Delhi
- **state:** Delhi
- **lat:** 28.74994722
- **lon:** 77.11702778
- **region:** Delhi NCR (calibration)
- **btech_graduating:** 2412
- **C1_raw:** 10
- **C1_unit:** count of 19 (Prism excluded)
- **C1_source:** S050;S051;S052;S053
- **C1_note:** Solid: Bain, ZS, Eternal, JP Morgan Chase, Everest, PwC, Deloitte (brief B05 plus Getmyuni RB18). Aggregator-only, not independently confirmed as a current single list: BCG, McKinsey (CollegeSearch.in), Fractal (Careers360). Total count includes both tiers per PLAN.md 7.4; see conflicts.md ruling B-C3.
- **C2_raw:** 14
- **C2_unit:** count of non-tech recruiters of any kind
- **C2_source:** S050;S051;S052;S053
- **C2_note:** Bain, ZS, Eternal, JP Morgan Chase, Everest, PwC, Deloitte, BCG, McKinsey, Fractal, Bank of America, Deutsche Bank, SmartCube, Goldman Sachs. No sector-wise offer-share split found for DTU; falls back to recruiter count per PLAN.md 7.4.
- **C3_raw:** 2412
- **C3_unit:** B.Tech students graduated, 2023-24 cohort
- **C3_source:** S050
- **C3_note:** DTU's own NIRF 2025 data submission (tier 3, official). 1,759 of 2,412 placed, median salary Rs 13,25,000. This is case-canon per conflicts.md ruling B-C1; do not blend with Getmyuni's season-based figures.
- **C4_raw:** 2
- **C4_unit:** active societies (confirmed, with partial follower data)
- **C4_source:** S055;S056
- **C4_note:** 180 Degrees Consulting DTU (@180dc.dtu, 1,981 IG followers, active, recruiting) and E-Cell DTU (@ecelldtu, 14,600 IG followers, active, Elevate 2026 on 8 Sep). Combined IG followers approx 16,581; no LinkedIn follower data found for either. DCG and ASSETS DTU confirmed to exist (self-descriptions found) but no Instagram/LinkedIn handle or follower count confirmed for either.
- **C5_raw:** 2 of 3 present (a,b)
- **C5_unit:** count of the 3 prep-vacuum markers present
- **C5_source:** S059;plan F08
- **C5_note:** (a) present: 180DC DTU has published 3 editions of a 'DTU CaseBook' (RB37). (b) present: CrackNonTech names DTU alumni among its community (F08, conflicts.md ruling D-C1 keeps this fact while dropping the unconfirmable price). (c) not found: no institute-run non-tech training confirmed.
- **C6_raw:** 6.5
- **C6_unit:** months (est.)
- **C6_source:** est.
- **C6_note:** No officially confirmed DTU placement/internship calendar for Oct 2026 to Sep 2027 (conflicts.md gap, carried from Lane B gaps 3-5). Uses the commonly cited 1 Aug internship/placement-season start (est., per RB44/RB45) measured forward from 15 Jan 2027 to 1 Aug 2027.
- **C7_raw:** 4
- **C7_unit:** count (0 to 4+)
- **C7_source:** RA35;RA44
- **C7_note:** +2 same city (DTU is the reference campus itself); +1 founder Harsh Agarwal is a DTU 2023 alumnus (RA44, Topmate bio 'DTU'23'); +1 DTU named in BeyondTech's own ambassador-recruitment LinkedIn post (RA35). +0 no confirmed society co-host with another DTU/NSUT society found (not applicable to self).
- **anchor_recruiters_found:** Bain and Company;ZS Associates;Eternal (Zomato);JP Morgan Chase;Everest Group;PwC;Deloitte;BCG (aggregator-reported);McKinsey (aggregator-reported);Fractal (aggregator-reported)

- **nontech_societies:** 180 Degrees Consulting DTU:1981;E-Cell DTU:14600;DTU Consulting Group:NOT FOUND;ASSETS DTU (finance):NOT FOUND
- **season_start_month:** August (est.)
- **evidence_gaps:** DTU's own official T&P Cell structure, a confirmed 2026-27 calendar, and a full 25+ firm recruiter detail table (firm/role/CTC/branch/CGPA/month/offers) were not found anywhere in this project's research (conflicts.md gaps, carried forward). Used here as the calibration baseline per PLAN.md 7.1.

NSUT

- **city:** Delhi
- **state:** Delhi
- **lat:** 28.610972
- **lon:** 77.038472
- **region:** Delhi NCR (calibration)
- **btech_graduating:** 1725
- **C1_raw:** 4
- **C1_unit:** count of 19 (Prism excluded)
- **C1_source:** B06;S400
- **C1_note:** Brief B06 names Eternal, ZS, Bain, L.E.K. Consulting (Prism excluded per conflicts.md ruling C-C1, quoted verbatim nowhere counted). An aggregator (S400) separately names Deloitte and KPMG among 'top recruiters' but on an undated, lower-confidence page mixing older and newer cycles; not added to the confirmed count, noted only.
- **C2_raw:** 4
- **C2_unit:** count of non-tech recruiters of any kind
- **C2_source:** B06;S400
- **C2_note:** Same four brief-named firms (Eternal, ZS, Bain, L.E.K. Consulting). No sector-wise offer split found for NSUT specifically.
- **C3_raw:** 1725
- **C3_unit:** B.Tech students graduated, 2023-24 cohort
- **C3_source:** S401
- **C3_note:** NIRF 2025 engineering submission (IR-E-C-6379), tier 3 official. 1,362 of 1,725 placed (about 79%), median salary Rs 16.5 lakh. An aggregator figure of 73% placement rate for the same cohort does not reconcile and is not used.
- **C4_raw:** 1
- **C4_unit:** active society (confirmed existence; no follower count)
- **C4_source:** S402
- **C4_note:** 180 Degrees Consulting NSUT confirmed (founded 2018, 30+ clients claimed on its own branch page). No Instagram or LinkedIn handle or follower count found after 3 distinct searches.
- **C5_raw:** 1 of 3 present (b)
- **C5_unit:** count of the 3 prep-vacuum markers present
- **C5_source:** plan F08
- **C5_note:** (b) present: CrackNonTech names NSUT alumni among its community (F08). (a) not found: no NSUT-specific casebook confirmed (180DC NSUT's own page does not mention one). (c) not found.
- **C6_raw:** 6.5
- **C6_unit:** months (est.)
- **C6_source:** est.
- **C6_note:** Same national-convention estimate as DTU; no NSUT-specific calendar found.
- **C7_raw:** 3
- **C7_unit:** count (0 to 4+)
- **C7_source:** RA35
- **C7_note:** +2 same city as DTU (reference campus); +1 NSUT named in BeyondTech's own ambassador-recruitment LinkedIn post (RA35). +0 no mentor/testimonial alumnus confirmed from NSUT (RA47/RA48, NOT FOUND project-wide); +0 no confirmed society co-host.
- **anchor_recruiters_found:** Eternal (Zomato);ZS Associates;Bain and Company;L.E.K. Consulting
- **nontech_societies:** 180 Degrees Consulting NSUT:NOT FOUND (follower count)
- **season_start_month:** August (est.)
- **evidence_gaps:** No sector-wise non-tech offer split, no full recruiter detail table, and no follower counts for any NSUT non-tech society were found. NIRF submission does not break B.Tech placement down by branch or role for NSUT.

Thapar Institute of Engineering and Technology

- **city:** Patiala
- **state:** Punjab
- **lat:** 30.3564
- **lon:** 76.3625
- **region:** North (calibration)
- **btech_graduating:** 2500
- **C1_raw:** 3
- **C1_unit:** count of 19 (Prism excluded)
- **C1_source:** B06
- **C1_note:** Brief B06 names Bain, ZS, Deloitte for Thapar and BIT Mesra jointly. No independent web source in this pass separately reconfirmed these three for Thapar specifically (3 searches run, found only aggregate average/highest package data, S403/S404, no recruiter-by-firm list for Thapar). Counted per the brief (tier 1, case-canon) since B06 is the highest-ranked source in the hierarchy.
- **C2_raw:** 3
- **C2_unit:** count of non-tech recruiters of any kind
- **C2_source:** B06
- **C2_note:** Same three brief-named firms; no broader non-tech recruiter list found for Thapar.
- **C3_raw:** 2500
- **C3_unit:** B.Tech students, sanctioned UG intake (est. proxy for graduating batch)
- **C3_source:** S405
- **C3_note:** NIRF 2025 engineering submission (IR-E-I-1480) gives sanctioned UG intake of 2,500/year for 2021-22 through 2023-24 (2,395 for 2020-21). No separate 'students graduated' or 'students placed' count was extracted from this submission in this pass; intake is used as an est. proxy per PLAN.md's explicit allowance for 'est.' where a figure cannot be sourced after three searches. A 2024 convocation report (2,863 degrees, all programmes, not B.Tech-only) does not substitute.
- **C4_raw:** 0
- **C4_unit:** active societies (none confirmed)
- **C4_source:** n/a
- **C4_note:** No consulting, finance, product, analytics or entrepreneurship society at Thapar with a confirmable name, Instagram/LinkedIn handle or follower count was found after 3 distinct searches.
- **C5_raw:** 0 of 3 present
- **C5_unit:** count of the 3 prep-vacuum markers present
- **C5_source:** plan F08
- **C5_note:** None of the three markers found: no casebook, CrackNonTech's named-alumni list (F08) does not include Thapar, and no institute-run non-tech training was found.
- **C6_raw:** 6.5
- **C6_unit:** months (est.)
- **C6_source:** est.
- **C6_note:** No Thapar-specific placement calendar found; national-convention estimate used.
- **C7_raw:** 3
- **C7_unit:** count (0 to 4+)
- **C7_source:** RA35
- **C7_note:** +2 same city as itself (Thapar is a reference campus); +1 Thapar named in BeyondTech's own ambassador-recruitment LinkedIn post (RA35). +0 no mentor/testimonial alumnus confirmed; +0 no confirmed society co-host.
- **anchor_recruiters_found:** Bain and Company;ZS Associates;Deloitte
- **nontech_societies:** NOT FOUND (no named non-tech society with evidence)
- **season_start_month:** August (est.)
- **evidence_gaps:** Thapar's own placement report/brochure was not fetched in this pass (3 search attempts returned only aggregator pages, S403/S404, with conflicting average package figures of Rs 11.25 to 11.90 LPA). No recruiter-by-firm detail, no society data and no graduating-batch count (as distinct from sanctioned intake) were found.

BIT Mesra

- **city:** Ranchi
- **state:** Jharkhand

- **lat:** 23.41666667
- **lon:** 85.44027778
- **region:** East (calibration)
- **btech_graduating:** 900
- **C1_raw:** 3
- **C1_unit:** count of 19 (Prism excluded)
- **C1_source:** B06
- **C1_note:** Brief B06 names Bain, ZS, Deloitte for Thapar and BIT Mesra jointly (tier 1, case-canon). Aggregator recruiter lists found in this pass (S406/S407/S408: Accenture, Adobe, Airtel, Amazon, CapGemini, Deloitte, IBM, KPMG, Mahindra, Reliance, Tata Motors, Wipro, Microsoft, Infosys, TCS, DE Shaw) independently confirm Deloitte only among the 19 anchors; KPMG also appears on one list (S406) but not consistently across sources.
- **C2_raw:** 4
- **C2_unit:** count of non-tech recruiters of any kind
- **C2_source:** B06;S406
- **C2_note:** Bain, ZS, Deloitte (brief) plus KPMG (S406, one aggregator list only).
- **C3_raw:** 900
- **C3_unit:** B.Tech students, sanctioned intake (est.)
- **C3_source:** S443
- **C3_note:** Sources disagree sharply (840, 960, 990 seats across Vedantu/SelectYourUniversity/Aakash, S443), none dated or branch-specified cleanly, and none is BIT Mesra's own official seat matrix. 900 is a rough midpoint est.; no 'students graduated' or 'students placed' count was found for any specific cohort.
- **C4_raw:** 0
- **C4_unit:** active societies (unconfirmed)
- **C4_source:** n/a
- **C4_note:** BIT Mesra's own 'Annual Club Activity Report 2024-25' PDF exists (bitmesra.ac.in) but was not opened and read in this pass; no specific consulting, finance, product or analytics society name, Instagram handle or follower count was independently confirmed.
- **C5_raw:** 0 of 3 present
- **C5_unit:** count of the 3 prep-vacuum markers present
- **C5_source:** plan F08
- **C5_note:** None of the three markers found: no casebook, CrackNonTech's named-alumni list (F08) does not include BIT Mesra, no institute-run non-tech training found.
- **C6_raw:** 6.5
- **C6_unit:** months (est.)
- **C6_source:** est.
- **C6_note:** No BIT Mesra-specific placement calendar found; national-convention estimate used.
- **C7_raw:** 2
- **C7_unit:** count (0 to 4+)
- **C7_source:** n/a
- **C7_note:** +2 same city as itself (BIT Mesra is a reference campus). +0: BIT Mesra is NOT named in BeyondTech's ambassador-recruitment LinkedIn post (RA35 names only DTU, NSUT, Thapar and BITS Pilani); +0 no mentor/testimonial alumnus confirmed; +0 no confirmed society co-host.
- **anchor_recruiters_found:** Bain and Company;ZS Associates;Deloitte;KPMG (one aggregator list only)
- **nontech_societies:** NOT FOUND (Annual Club Activity Report PDF exists but was not analysed for named non-tech societies in this pass)
- **season_start_month:** August (est.)
- **evidence_gaps:** Sanctioned intake, graduating batch size, society data and a reliable recruiter detail table were all either unconfirmed or internally conflicting across the three aggregator sources checked. This is the weakest-evidenced calibration row in the set and should be flagged to the lead for a possible follow-up pass on BIT Mesra's own site (bitmesra.ac.in) rather than aggregators.

BITS Pilani (Pilani campus)

- **city:** Pilani
- **state:** Rajasthan
- **lat:** 28.36387778

- **lon:** 75.58701667
- **region:** North
- **btech_graduating:** 800
- **C1_raw:** 5
- **C1_unit:** count of 19 (Prism excluded)
- **C1_source:** plan F04
- **C1_note:** Seed fact F04 (Careers360 news plus BITS Pilani's own 'University Statistics for 2024-25' PDF, S409, tier 3 official) confirms BCG, Kearney, ZS Associates, Deloitte USI, EY among recruiters for the 2025-26 phase-1 cycle. This is the strongest C1 evidence base in this scorer's longlist set and the only one independently backed by an official institute document.
- **C2_raw:** 16
- **C2_unit:** sector split (IT/software 50%, analytics 16%, banking/finance 7%, consulting 2%)
- **C2_source:** plan F04
- **C2_note:** F04's own sector split gives analytics (16%) and banking/finance (7%) and consulting (2%) as shares of offers; summed non-tech-adjacent share is approx 25% of offers (16+7+2), which per PLAN.md 7.4's 'share of offers' measure falls in the 20 to 27% band. Recorded raw as the summed percentage.
- **C3_raw:** 800
- **C3_unit:** B.Tech students, sanctioned intake (est.)
- **C3_source:** S440;S441
- **C3_note:** No single clean 2024-25 B.Tech-only seat total was found; a 2026 seat matrix (S440) gives Pilani's combined B.E./B.Tech/M.Sc. capacity as 1,259, of which the B.E.+B.Pharm 'Group A' total is 824. An older BITS admissions page cites 800 Pilani seats specifically for B.E./B.Tech (pre-2020s figure). 800 is used as a conservative est. of the B.Tech-only annual graduating batch.
- **C4_raw:** 2
- **C4_unit:** active societies (confirmed existence; no follower count)
- **C4_source:** S410;S411
- **C4_note:** Business Analytics Club (Department of Management, Pilani) and 180 Degrees Consulting BITS Pilani branch both confirmed to exist and be active (a student-run Substack guide to 'Stepping into Consulting at BITS Pilani', S410, references ongoing consulting-recruitment activity). No Instagram/LinkedIn handle or follower count found for either after 3 searches.
- **C5_raw:** 1 of 3 present (b)
- **C5_unit:** count of the 3 prep-vacuum markers present
- **C5_source:** plan F08
- **C5_note:** (b) present: CrackNonTech names BITS Pilani alumni among its community (F08). (a) not found: no BITS Pilani-specific casebook confirmed. (c) not found.
- **C6_raw:** 6.5
- **C6_unit:** months (est.)
- **C6_source:** est.
- **C6_note:** No BITS Pilani-specific calendar found; F04's 'phase-1 2025-26' is dated to an academic year, not a month. National-convention estimate used.
- **C7_raw:** 3
- **C7_unit:** count (0 to 4+)
- **C7_source:** RJ05;RA35
- **C7_note:** +2 under 300 km from DTU/NSUT (approx 155 km); +1 BITS Pilani named in BeyondTech's own ambassador-recruitment LinkedIn post (RA35, alongside DTU, NSUT, Thapar). +0 no mentor/testimonial alumnus confirmed; +0 no confirmed society co-host.
- **anchor_recruiters_found:** BCG;Kearney;ZS Associates;Deloitte (USI);EY
- **nontech_societies:** Business Analytics Club (Dept of Management):NOT FOUND (followers);180 Degrees Consulting BITS Pilani:NOT FOUND (followers)
- **season_start_month:** August (est.)
- **evidence_gaps:** Pilani-campus-specific (as opposed to all-three-campus) seat and graduating-batch figures were not found cleanly; 800 is an est. No follower counts for either confirmed society. This is nonetheless the best-evidenced longlist college in the set on C1 and C2, owing to the official University Statistics PDF (F04/S409).

PEC Chandigarh

- **city:** Chandigarh
- **state:** Chandigarh

- **lat:** 30.76666667
- **lon:** 76.78333333
- **region:** North
- **btech_graduating:** 800
- **C1_raw:** 4
- **C1_unit:** count of 19 (Prism excluded)
- **C1_source:** S412;plan F05
- **C1_note:** PEC's own 2024-25 placement report (S412, tier 3 official) names ZS Associates, JP Morgan Chase and American Express among recruiters. Seed fact F05 (Prosple listing) separately confirms a Bain analyst campus-hiring drive restricted to PEC for the 2023 batch. Aggregator lists (S413) add Deloitte and KPMG but without a dated, firm-specific confirmation; not counted in the solid total.
- **C2_raw:** 7
- **C2_unit:** count of non-tech recruiters of any kind
- **C2_source:** S412;S413;plan F05
- **C2_note:** ZS Associates, JP Morgan Chase, American Express, Bain (F05), Deloitte (aggregator), KPMG (aggregator), Accenture (aggregator, generic brand, not confirmed as 'Accenture Strategy' specifically).
- **C3_raw:** 800
- **C3_unit:** B.Tech students, sanctioned intake (est.)
- **C3_source:** S442;S444
- **C3_note:** A Tribune report (S442) on the 2024-25 JoSAA cutoff names 800 seats allotted at PEC across engineering and design courses; a branch-wise breakdown in the same report sums to about 720 B.Tech-only seats. 800 (the report's own headline figure, inclusive of B.Des) is used as a conservative est.; exact B.Tech-only graduating count was not found.
- **C4_raw:** 1
- **C4_unit:** active society (confirmed, active; no follower count)
- **C4_source:** S444;S445
- **C4_note:** Entrepreneurship and Incubation Cell (EIC), PEC's own official page, confirmed active with named recent events (E-Summit 2025 in March 2025; a two-day Start-Up Fair in October 2024). No consulting or finance-specific society, and no Instagram/LinkedIn handle or follower count, found after 3 searches.
- **C5_raw:** 0 of 3 present
- **C5_unit:** count of the 3 prep-vacuum markers present
- **C5_source:** plan F08
- **C5_note:** None found: no casebook, CrackNonTech's named-alumni list (F08) does not include PEC, no institute-run non-tech training confirmed.
- **C6_raw:** 6.5
- **C6_unit:** months (est.)
- **C6_source:** est.
- **C6_note:** No PEC-specific calendar found; national-convention estimate used.
- **C7_raw:** 2
- **C7_unit:** count (0 to 4+)
- **C7_source:** RJ06
- **C7_note:** +2 under 300 km from DTU/NSUT/Thapar (approx 63 km from Thapar, Patiala). +0 PEC not named in BeyondTech's ambassador LinkedIn post; +0 no mentor/testimonial alumnus confirmed; +0 no confirmed society co-host.
- **anchor_recruiters_found:** ZS Associates;JP Morgan Chase;American Express;Bain and Company (2023 batch only, F05)
- **nontech_societies:** Entrepreneurship and Incubation Cell (EIC):NOT FOUND (followers)
- **season_start_month:** August (est.)
- **evidence_gaps:** No sector-wise non-tech offer split found; C2 falls back to a recruiter count. No consulting/finance-specific society (as opposed to the general EIC) was found. PEC's own placement report (S412) is a genuine tier-3 source, strengthening confidence on C1 relative to most of the rest of this longlist.

IIIT Delhi

- **city:** Delhi
- **state:** Delhi
- **lat:** 28.54444444
- **lon:** 77.2725

- **region:** Delhi NCR
- **btech_graduating:** 480
- **C1_raw:** 0
- **C1_unit:** count of 19 (Prism excluded)
- **C1_source:** S416;S417
- **C1_note:** No anchor recruiter was independently confirmed as IIIT-Delhi-specific after 3 searches. The only consulting-sounding name found ('Accenture Strategy and Consulting') appeared in a result set the search tool itself flagged as belonging to IIT Delhi, not IIIT Delhi, and was explicitly excluded rather than miscounted.
- **C2_raw:** 0
- **C2_unit:** count of non-tech recruiters of any kind
- **C2_source:** S416
- **C2_note:** Same finding: no IIIT-Delhi-specific non-tech recruiter name could be confirmed; all recruiter names found in searches were either IIT-Delhi-specific (explicitly flagged as a different institute) or generic tech-company names (Microsoft, Amazon class) outside the non-tech category.
- **C3_raw:** 480
- **C3_unit:** B.Tech students, sanctioned UG intake, 2023-24 (rising to 540 for 2024-25)
- **C3_source:** S417;S417b
- **C3_note:** NIRF 2025 (IR-E-U-0105) and the self-hosted NIRF 2026 submission both give this figure, tier 3 official. This FAILS screen F1 (needs a graduating batch of at least 600) if intake is used as the graduating-batch proxy; flagged for the lead.
- **C4_raw:** 0
- **C4_unit:** active societies (none confirmed)
- **C4_source:** n/a
- **C4_note:** No consulting, finance, product, analytics or entrepreneurship society at IIIT Delhi with a confirmable name, handle or follower count was found after 3 distinct searches.
- **C5_raw:** 0 of 3 present
- **C5_unit:** count of the 3 prep-vacuum markers present
- **C5_source:** plan F08
- **C5_note:** None found.
- **C6_raw:** 6.5
- **C6_unit:** months (est.)
- **C6_source:** est.
- **C6_note:** No IIIT-Delhi-specific calendar found; national-convention estimate used.
- **C7_raw:** 2
- **C7_unit:** count (0 to 4+)
- **C7_source:** n/a
- **C7_note:** +2 same city as DTU/NSUT. +0 not named in BeyondTech's ambassador post; +0 no mentor/testimonial alumnus; +0 no confirmed society co-host.
- **anchor_recruiters_found:** NONE CONFIRMED
- **nontech_societies:** NOT FOUND (no named non-tech society; general web search could not separate IIIT Delhi from IIT Delhi results in several queries)
- **season_start_month:** August (est.)
- **evidence_gaps:** This is the weakest-screened longlist college: C1 (recruiter overlap) and C4 (society surface) both returned zero confirmed evidence, and the graduating batch of 480 to 540 is itself below the F1 screen threshold of 600. A material risk is that general web search conflates IIIT Delhi with the much larger, better-indexed IIT Delhi; a direct fetch of IIIT Delhi's own placement cell page was not attempted in this pass and is recommended before this college is dropped on the screen.

IGDTUW

- **city:** Delhi
- **state:** Delhi
- **lat:** 28.664698
- **lon:** 77.232669
- **region:** Delhi NCR
- **btech_graduating:** 654
- **C1_raw:** 3

- **C1_unit:** count of 19 (Prism excluded)
- **C1_source:** S418;plan F07
- **C1_note:** An aggregator's 'top recruiters' list (S418) names Bain, American Express and JP Morgan Chase & Co. among IGDTUW recruiters, described in the source itself as indicative rather than an official sector breakdown. Seed fact F07 (IGDTUW's own placements page) separately confirms about 52 companies visited, including HUL and Mahindra (neither an anchor).
- **C2_raw:** 3
- **C2_unit:** count of non-tech recruiters of any kind
- **C2_source:** S418
- **C2_note:** Same three names (Bain, American Express, JP Morgan Chase); no official IGDTUW sector-wise breakdown found.
- **C3_raw:** 654
- **C3_unit:** B.Tech students graduated, 2024 cohort (per NIRF 2025 data)
- **C3_source:** S418
- **C3_note:** 571 of 654 placed (about 87%); median package Rs 18.47 lakh; highest Rs 56 LPA (Adobe). This is NIRF-sourced per the aggregator's own citation, tier 3 by origin though accessed via an aggregator summary; the lead should verify against IGDTUW's own NIRF PDF directly if a stricter tier-3 citation is needed.
- **C4_raw:** 1
- **C4_unit:** active society (named via a secondary list; activity and followers unconfirmed)
- **C4_source:** S446
- **C4_note:** A finance and economics society, 'Finivesta', is named in a 2024 Reddit compilation of IGDTUW student societies (S446); the compilation itself says it is user-assembled and about two years old. No Instagram/LinkedIn handle, follower count, or confirmation of a post in the last 6 months was found after 3 further searches.
- **C5_raw:** 0 of 3 present
- **C5_unit:** count of the 3 prep-vacuum markers present
- **C5_source:** plan F08
- **C5_note:** None found: no casebook, CrackNonTech's named-alumni list (F08) does not include IGDTUW, no institute-run non-tech training confirmed.
- **C6_raw:** 6.5
- **C6_unit:** months (est.)
- **C6_source:** est.
- **C6_note:** No IGDTUW-specific calendar found; national-convention estimate used.
- **C7_raw:** 2
- **C7_unit:** count (0 to 4+)
- **C7_source:** n/a
- **C7_note:** +2 same city as DTU/NSUT. +0 not named in BeyondTech's ambassador post; +0 no mentor/testimonial alumnus; +0 no confirmed society co-host.
- **anchor_recruiters_found:** Bain and Company (aggregator-reported);American Express (aggregator-reported);JP Morgan Chase (aggregator-reported)
- **nontech_societies:** Finivesta (finance and economics society):NOT FOUND (followers, and last-post date unconfirmed; named only via a 2024 Reddit compilation)
- **season_start_month:** August (est.)
- **evidence_gaps:** C1's three recruiter names rest on a single aggregator page describing itself as indicative, not an official sector breakdown; these should be treated as weaker evidence than PLAN.md's 'source hierarchy' tier 3 to 4 sources. Finivesta's existence is plausible but not independently confirmed beyond one crowd-sourced list.

NIT Kurukshetra

- **city:** Kurukshetra
- **state:** Haryana
- **lat:** 29.94906
- **lon:** 76.817254
- **region:** North
- **btech_graduating:** 787
- **C1_raw:** 1
- **C1_unit:** count of 19 (Prism excluded)
- **C1_source:** S422

- **C1_note:** Deloitte is the only one of the 19 anchor recruiters independently confirmed in NIT Kurukshetra's 2025 recruiter lists (S422). Earlier-cycle sources (2022-23) separately name EXL Analytics, which is not on the fixed anchor list and is noted only as context.
- **C2_raw:** 1
- **C2_unit:** count of non-tech recruiters of any kind
- **C2_source:** S422
- **C2_note:** Same single confirmed name (Deloitte); no sector-wise offer split found.
- **C3_raw:** 787
- **C3_unit:** B.Tech students, eligible/registered, 2021-25 batch
- **C3_source:** S422;S423
- **C3_note:** 676 of 787 placed (85.9%), average package Rs 13.21 LPA, median Rs 10 LPA. Aggregator-reported (tier 7), not an NIT-Kurukshetra-own-document citation; one source gives a conflicting 827-of-1,124 figure for the same year that does not reconcile and is not used.
- **C4_raw:** 1
- **C4_unit:** active society (confirmed, case-competition activity; no follower count)
- **C4_source:** S424
- **C4_note:** NIT Kurukshetra's Innovation Cell ran a national case competition, 'Case on Point', on 1 March 2025, with judges from Central Bank of India, CSIR-CSIO Chandigarh and the World Space Council (S424). No dedicated finance or consulting club, and no Instagram/LinkedIn handle or follower count, found after 3 searches.
- **C5_raw:** 0 of 3 present
- **C5_unit:** count of the 3 prep-vacuum markers present
- **C5_source:** plan F08
- **C5_note:** None found.
- **C6_raw:** 6.5
- **C6_unit:** months (est.)
- **C6_source:** est.
- **C6_note:** No NIT-Kurukshetra-specific calendar found; national-convention estimate used.
- **C7_raw:** 2
- **C7_unit:** count (0 to 4+)
- **C7_source:** n/a
- **C7_note:** +2 under 300 km from DTU/NSUT (approx 134 km). +0 not named in ambassador post; +0 no mentor/testimonial alumnus; +0 no confirmed society co-host.
- **anchor_recruiters_found:** Deloitte
- **nontech_societies:** Innovation Cell (ran 'Case on Point' national case competition, Mar 2025):NOT FOUND (followers)
- **season_start_month:** August (est.)
- **evidence_gaps:** This longlist college returns the thinnest C1 evidence after IIIT Delhi: only Deloitte confirmed among 19 anchors, which would fail screen F2 (needs at least 5 of 20) on the evidence found. A direct fetch of NIT Kurukshetra's own Training and Placement Cell brochure (found at nitkkr.ac.in in search results but not fetched in full in this pass) is recommended before this college is dropped.

MNIT Jaipur

- **city:** Jaipur
- **state:** Rajasthan
- **lat:** 26.8622
- **lon:** 75.8156
- **region:** North
- **btech_graduating:** 717
- **C1_raw:** 3
- **C1_unit:** count of 19 (Prism excluded)
- **C1_source:** S425;S427
- **C1_note:** MNIT's own official 'Placement Report 2024-25' (S425, tier 3) and a Pagalguy aggregator list (S427) together confirm Deloitte (Finance and Consulting category), Meesho and JP Morgan Chase among 2024-25 recruiters.
- **C2_raw:** 3
- **C2_unit:** count of non-tech recruiters of any kind

- **C2_source:** S425;S427
- **C2_note:** Same three names (Deloitte, Meesho, JP Morgan Chase); Arcesium and Goldman Sachs also appear in these sources but are not on the fixed anchor list.
- **C3_raw:** 717
- **C3_unit:** B.Tech students, total registered UG, 2024-25
- **C3_source:** S425
- **C3_note:** MNIT's own official placement report (tier 3): 567 of 717 placed (79.08%), average Rs 12.85 LPA, median Rs 10 LPA, highest Rs 64 LPA. An aggregator (Getmyuni) separately reports 535 placed and an 11.58 LPA average for the same period, which does not reconcile with the official figure and is not used (per the source hierarchy, the official report outranks the aggregator).
- **C4_raw:** 1
- **C4_unit:** active society (confirmed, active; no follower count)
- **C4_source:** S428
- **C4_note:** MNIT's Finance & Economics Club is confirmed active, having won 1st place in a case competition ('Birbal Ki Khichdi') and 2nd in an IPL-auction event at an inter-college competition, Breakpoint 2026, hosted by Manipal University Jaipur (S428). No dedicated consulting club or E-Cell found; no Instagram/LinkedIn handle or follower count found after 3 searches.
- **C5_raw:** 0 of 3 present
- **C5_unit:** count of the 3 prep-vacuum markers present
- **C5_source:** plan F08
- **C5_note:** None found.
- **C6_raw:** 6.5
- **C6_unit:** months (est.)
- **C6_source:** est.
- **C6_note:** No MNIT-Jaipur-specific calendar found; national-convention estimate used.
- **C7_raw:** 2
- **C7_unit:** count (0 to 4+)
- **C7_source:** n/a
- **C7_note:** +2 under 300 km from DTU/NSUT (approx 245 km straight-line). +0 not named in ambassador post; +0 no mentor/testimonial alumnus; +0 no confirmed society co-host.
- **anchor_recruiters_found:** Deloitte;Meesho;JP Morgan Chase
- **nontech_societies:** Finance & Economics Club (won 1st place, case competition, Breakpoint 2026):NOT FOUND (followers)
- **season_start_month:** August (est.)
- **evidence_gaps:** C3 and C1 both rest on MNIT's own official placement report (S425), the second-strongest official-source backing in this longlist after BITS Pilani and PEC. No society follower data found; the Finance & Economics Club's confirmed inter-college case-competition win is nonetheless the clearest 'active, non-tech, recent' signal found for any longlist college besides NIT Kurukshetra's Innovation Cell.

MNNIT Allahabad

- **city:** Prayagraj
- **state:** Uttar Pradesh
- **lat:** 25.4918
- **lon:** 81.8658
- **region:** North
- **btech_graduating:** 844
- **C1_raw:** 2
- **C1_unit:** count of 19 (Prism excluded)
- **C1_source:** S429;S430;S431
- **C1_note:** Deloitte (named under an 'IT & Consulting' category) and EY (named under a 'Finance & Analytics' category) are the only two of the 19 anchors independently confirmed across three aggregator sources (S429/S430/S431) for the 2025 season. Generic 'Accenture' also appears but is not confirmed as the specific 'Accenture Strategy' anchor entry.
- **C2_raw:** 2
- **C2_unit:** count of non-tech recruiters of any kind
- **C2_source:** S429;S430;S431
- **C2_note:** Same two names (Deloitte, EY).
- **C3_raw:** 844

- **C3_unit:** B.Tech students, eligible, 2025 season
- **C3_source:** S429
- **C3_note:** 966 offers to 844 eligible B.Tech students, an 83.29% placement rate, average Rs 20.43 LPA, median Rs 12.6 LPA (aggregator-reported, tier 7). The NIRF-sourced median for the 2023-24 cycle (Rs 12 LPA) is close but describes a different cohort/year and is not blended with this figure.
- **C4_raw:** 1
- **C4_unit:** active society (confirmed, active; no follower count)
- **C4_source:** n/a (search result synthesis, no single fetchable S-ID)
- **C4_note:** MNNIT's E-Cell is confirmed active with a named flagship event, an entrepreneurship summit called 'Renaissance'. No consulting or finance-specific club, and no Instagram/LinkedIn handle or follower count for the E-Cell itself, found after 3 searches; a third-party tracker's 3,505-follower figure (S439) is for the whole institute's Instagram account, not the E-Cell, and is not used for C4.
- **C5_raw:** 0 of 3 present
- **C5_unit:** count of the 3 prep-vacuum markers present
- **C5_source:** plan F08
- **C5_note:** None found.
- **C6_raw:** 6.5
- **C6_unit:** months (est.)
- **C6_source:** est.
- **C6_note:** No MNNIT-specific calendar found; national-convention estimate used.
- **C7_raw:** 0
- **C7_unit:** count (0 to 4+)
- **C7_source:** n/a
- **C7_note:** Distance from DTU/NSUT is approx 593 km; from BIT Mesra approx 428 km; from Thapar further still. All exceed the 300 km threshold, so +0. +0 not named in ambassador post; +0 no mentor/testimonial alumnus; +0 no confirmed society co-host.
- **anchor_recruiters_found:** Deloitte;EY
- **nontech_societies:** E-Cell MNNIT (flagship event: Renaissance entrepreneurship summit):NOT FOUND (followers)
- **season_start_month:** August (est.)
- **evidence_gaps:** Lowest C7 access score in this longlist set (0), since MNNIT sits over 300 km from every existing BeyondTech campus and is absent from every other access signal checked. C1 evidence (2 of 19 anchors) is thin and entirely aggregator-sourced; no official MNNIT placement-cell document was fetched in this pass.

IIIT Allahabad

- **city:** Prayagraj
- **state:** Uttar Pradesh
- **lat:** 25.43
- **lon:** 81.77194444
- **region:** North
- **btech_graduating:** 428
- **C1_raw:** 1
- **C1_unit:** count of 19 (Prism excluded)
- **C1_source:** S432;S433;S434
- **C1_note:** Deloitte is the only one of the 19 anchors independently confirmed across three aggregator sources for the 2025 season. Generic 'Accenture' also appears in two of the three sources but is not confirmed as the specific 'Accenture Strategy' anchor entry, so it is not added to the solid count.
- **C2_raw:** 1
- **C2_unit:** count of non-tech recruiters of any kind
- **C2_source:** S432;S433;S434
- **C2_note:** Same single confirmed name (Deloitte).
- **C3_raw:** 428
- **C3_unit:** B.Tech students graduated, 2023-24 cohort (per NIRF 2025 data)
- **C3_source:** S433
- **C3_note:** 348 of 428 placed (about 90%), per a Careers360 page citing NIRF 2025 data; median package Rs 18.50 LPA. This FAILS screen F1 (needs a graduating batch of at least 600).

- **C4_raw:** 0
- **C4_unit:** active societies (none confirmed)
- **C4_source:** n/a
- **C4_note:** No consulting, finance, product, analytics or entrepreneurship society at IIIT Allahabad with a confirmable name, handle or follower count was found after 3 distinct searches.
- **C5_raw:** 0 of 3 present
- **C5_unit:** count of the 3 prep-vacuum markers present
- **C5_source:** plan F08
- **C5_note:** None found.
- **C6_raw:** 6.5
- **C6_unit:** months (est.)
- **C6_source:** est.
- **C6_note:** No IIIT-Allahabad-specific calendar found; national-convention estimate used.
- **C7_raw:** 0
- **C7_unit:** count (0 to 4+)
- **C7_source:** n/a
- **C7_note:** Distance from DTU/NSUT approx 593 km; from BIT Mesra approx 425 km; from Thapar further still. All exceed 300 km, so +0 on every sub-criterion (not named in ambassador post; no mentor/testimonial alumnus; no confirmed society co-host).
- **anchor_recruiters_found:** Deloitte
- **nontech_societies:** NOT FOUND (no named non-tech society)
- **season_start_month:** August (est.)
- **evidence_gaps:** Fails screen F1 on graduating-batch size (428, below the 600 floor) and would also fail F2 on the evidence found (only 1 of 19 anchors confirmed, below the 5-firm floor). Institute's own Instagram account (3,140 followers per UniRank, S438) exists but is not club-specific and is not used for C4.

NIT Jalandhar

- **city:** Jalandhar
- **state:** Punjab
- **lat:** 31.39587
- **lon:** 75.53584
- **region:** North
- **btech_graduating:** 1098
- **C1_raw:** 2
- **C1_unit:** count of 19 (Prism excluded)
- **C1_source:** S435;S436;S437
- **C1_note:** Deloitte and American Express are the only two of the 19 anchors independently confirmed across three aggregator sources for the 2025 season. Generic 'Accenture' also appears in one source but is not confirmed as the specific 'Accenture Strategy' anchor entry.
- **C2_raw:** 2
- **C2_unit:** count of non-tech recruiters of any kind
- **C2_source:** S435;S436;S437
- **C2_note:** Same two names (Deloitte, American Express).
- **C3_raw:** 1098
- **C3_unit:** B.Tech students, eligible candidates, 2025 season
- **C3_source:** S435
- **C3_note:** 916 of 1,098 placed, an 83.42% rate (one source); a second source instead gives 850 of 1,110, an inconsistent pairing. 1,098 (the more frequently repeated eligible-count figure) is used; both figures are aggregator-reported (tier 7), not NIT-Jalandhar's own document. NIRF-reported engineering rank of 58th (2024 cycle) found but no NIRF placement table fetched in this pass.
- **C4_raw:** 0
- **C4_unit:** active societies (named only in generic terms; no society-specific confirmation)
- **C4_source:** S447
- **C4_note:** An E-Cell is confirmed to exist via a Collegedunia student Q&A (S447), described as heading sub-cells including a 'Media cell, Analytics cell, and Research cell', which could plausibly include a finance/analytics angle, but no named finance or consulting society, and no Instagram/LinkedIn handle or follower count, was confirmed after 3 searches.

- **C5_raw:** 0 of 3 present
- **C5_unit:** count of the 3 prep-vacuum markers present
- **C5_source:** plan F08
- **C5_note:** None found.
- **C6_raw:** 6.5
- **C6_unit:** months (est.)
- **C6_source:** est.
- **C6_note:** No NIT-Jalandhar-specific calendar found; national-convention estimate used.
- **C7_raw:** 2
- **C7_unit:** count (0 to 4+)
- **C7_source:** n/a
- **C7_note:** +2 under 300 km from Thapar, Patiala (approx 140 km straight-line). +0 not named in ambassador post; +0 no mentor/testimonial alumnus; +0 no confirmed society co-host.
- **anchor_recruiters_found:** Deloitte;American Express
- **nontech_societies:** E-Cell (sub-cells reported: Media, Analytics, Research, per a student Q&A; no named finance/consulting unit confirmed):NOT FOUND (followers)
- **season_start_month:** August (est.)
- **evidence_gaps:** C1, C3 and C4 all rest on aggregator or crowd-sourced sources only; no NIT Jalandhar-own placement brochure or society page was fetched in this pass. The E-Cell's 'Analytics cell' sub-unit is a plausible C5/C4 lead that was not confirmed cleanly and should be a target for a follow-up pass if this college advances past the screen.

NIT Tiruchirappalli

- **city:** Tiruchirappalli
- **state:** Tamil Nadu
- **lat:** 10.762
- **lon:** 78.816
- **region:** South
- **btech_graduating:** 1029 (official NIRF 2025 cohort figure, UG 4-year programme, 2024 drive); 964 is the current UG sanctioned annual intake across all years per the NIRF 2025 submission
- **C1_raw:** 4
- **C1_unit:** count (of 20 anchors; official recruiter-wall logos confirmed)
- **C1_source:** S501
- **C1_note:** Official 2025-26 UG Placement Brochure 'Our Esteemed Recruiters' logo wall (page 17) shows JP Morgan (JPMorgan Chase, logo appears twice), PwC, Deloitte and Zomato (Eternal's consumer brand, per Gate G1 ruling J-R3) among the 20-firm anchor list. Logos for Bain, ZS, Everest, L.E.K., Meesho, OYO, EY, KPMG, Accenture Strategy, American Express, Kearney, McKinsey, BCG, Fractal, Flipkart and Prism were not visible on the wall after a full-page visual review (rendered at 150dpi).
- **C2_raw:** 7
- **C2_unit:** count (non-tech recruiters of any kind; sector-split not available)
- **C2_source:** S501; S503
- **C2_note:** Share of offers by role not published. Count of non-tech-adjacent recruiter logos on the official 2025-26 wall: JP Morgan, PwC, Deloitte, Morgan Stanley, Citicorp, HSBC, Visa, BNP Paribas, Mahindra Finance, HDFC Bank, Federal Bank, Fidelity, Goldman Sachs, GEP, Zomato (15 counted visually); using the conservative floor of firms explicitly confirmed as consulting/finance/analytics by an aggregator cross-check (Cracku, S503: Deloitte, Accenture, McKinsey, Bain as consulting; Goldman Sachs, Morgan Stanley, JP Morgan as finance) = 7 distinct names independently corroborated by two source tiers. Recorded raw count is the conservative 7; the fuller logo-wall count of 15+ is noted for context.
- **C3_raw:** 1029
- **C3_unit:** students graduating per year (B.Tech)
- **C3_source:** S502
- **C3_note:** Getmyuni (aggregator) cites the NIRF 2025 disclosure for the 2024 UG drive: total graduating batch of 1,029 students, 791 placed, median salary Rs 14.35 LPA. The institute's own NIRF 2025 Engineering PDF (S500) confirms UG sanctioned intake of 964/year but its placement table extracted as jumbled text (image-based table) and could not be reliably parsed directly; Getmyuni's citation of the same filing is used as the aggregator-reported figure per source hierarchy, since it is traceable to the official filing.
- **C4_raw:** 3
- **C4_unit:** count of active non-tech societies; followers NOT FOUND
- **C4_source:** S504; S505; S506

- **C4_note:** Three named non-tech societies confirmed to exist: Consul-T / Business Finance & Consulting Club (BFC, consulting and finance), ProfNITT (finance, est. 2018 as a WhatsApp group, Instagram handle profnitt found but not its follower count), 180DC NIT Trichy (social-impact consulting, Instagram handle 180dcnitt found but not its follower count), and Analytica (analytics club under the Dept. of Management Studies, no Instagram handle found). Instagram/LinkedIn follower counts for all of these could not be retrieved after 3 distinct search attempts (direct handle searches returned no cached follower data); recorded as NOT FOUND, not fabricated. Last-post-within-6-months activity not independently confirmed for any of the four.
- **C5_raw:** none found
- **C5_unit:** (a) casebook, (b) external brand, (c) institute training
- **C5_source:** S504; S505
- **C5_note:** No society-published non-tech casebook found for NIT Trichy specifically (the only confirmed 180DC/IIM-club casebook publishers, per competitors.csv, are SGGSCC, Shaheed Bhagat Singh College, IIM Vizag, IIM Calcutta, IIM Ahmedabad, IIM Bangalore; NIT Trichy is not among them). No external prep brand (CrackNonTech, NextLeap, etc.) claims an ambassador or alumni presence at NIT Trichy in competitors.csv (CrackNonTech's named alumni colleges are DTU, BITS Pilani, NSUT, AKTU only). No institute-run non-tech placement-prep programme found distinct from the standard T&P Cell's mock-interview and webinar activity (S504).
- **C6_raw:** 7
- **C6_unit:** months (Jan 2027 to estimated season start)
- **C6_source:** n/a (est.)
- **C6_note:** No NIT Trichy-specific placement-season start date was found after 3 distinct search attempts (general web search, T&P cell page review, UG brochure review). Getmyuni's NIT Calicut season tracker (a different NIT, used only as a cross-NIT timing proxy) showed 1,000+ offers already recorded by 25 Sep 2025, implying NIT placement seasons are typically well underway by August-September. Internship/pre-placement activity for third-years is separately reported starting around July per student reviews. Season start month recorded as 'August, est.' (cross-NIT inference, low confidence); months from 15 Jan 2027 to August 2027 = 7.
- **C7_raw:** 0
- **C7_unit:** count (0 to 4+)
- **C7_source:** n/a
- **C7_note:** Not within 300 km of DTU/NSUT/Thapar/BIT Mesra (Tamil Nadu, confirmed 0 on this sub-criterion). No BeyondTech mentor or testimonial alumnus traced to NIT Trichy (all six names in R-A-beyondtech.md are NOT FOUND for college of origin, per RA47/RA48). No confirmed case of an NIT Trichy society co-hosting with a DTU or NSUT society (Lane B's search for DTU brand-partnership precedents returned zero examples generally, and no reverse search surfaced an NIT Trichy-specific instance). Not named in BeyondTech's ambassador-recruitment LinkedIn post (W13 names only DTU, NSUT, Thapar and BITS Pilani).
- **anchor_recruiters_found:** JP Morgan Chase; PwC; Deloitte; Eternal (Zomato logo, per Gate G1 ruling J-R3)
- **nontech_societies:** Consul-T / BFC (consulting+finance):NOT FOUND; ProfNITT (finance):NOT FOUND; 180DC NIT Trichy (social consulting):NOT FOUND; Analytica (analytics, DoMS):NOT FOUND
- **season_start_month:** August (est.)
- **evidence_gaps:** Follower counts for all four named societies NOT FOUND after 3 search attempts each handle. Placement-season start month is an estimate, not NIT-Trichy-specific. The NIRF Engineering PDF's own placement table could not be parsed as clean text (image/table extraction failure); the Getmyuni citation of the same filing was used instead, consistent with the source hierarchy's preference for traceable official data over independent aggregator estimates.

NIT Karnataka Surathkal

- **city:** Surathkal (Mangalore)
- **state:** Karnataka
- **lat:** 13.033
- **lon:** 74.47
- **region:** South
- **btech_graduating:** 835 (B.Tech eligible/registered cohort for the 2024-25 placement cycle)
- **C1_raw:** 1
- **C1_unit:** count (of 20 anchors; aggregator-reported only)
- **C1_source:** S509
- **C1_note:** American Express is named in Shiksha's (aggregator) recent-years recruiter list for NIT Surathkal alongside Microsoft, Amazon, Nvidia, Adobe, Intuit, Goldman Sachs, Morgan Stanley and Bajaj Auto. No official NITK CDC placement brochure PDF could be located after 3 distinct search attempts (general search, site-restricted search for the brochure, and a direct fetch attempt at the CDC's own subdomains cdc.nitk.ac.in/cdc.l1-l4.nitk.ac.in which returned only a 'Download the Brochure' link with no resolvable file URL). No other of the 20 anchors (Bain, ZS, Eternal, JP Morgan Chase, Everest, PwC, Deloitte, L.E.K., Meesho, OYO, EY, KPMG, Accenture Strategy, Kearney, McKinsey, BCG, Fractal, Flipkart, Prism) appears in any source checked for NITK specifically.
- **C2_raw:** 3

- **C2_unit:** count (non-tech recruiters of any kind)
- **C2_source:** S509; S510
- **C2_note:** Finance/analytics-adjacent names found across two aggregators: Goldman Sachs, Morgan Stanley, American Express (Shiksha, S509); FindMyCollege (S510) separately names Goldman Sachs and Qualcomm among top recruiters without further non-tech detail. Distinct non-tech names counted: Goldman Sachs, Morgan Stanley, American Express = 3. Sector-split (share of offers) not published by any source found.
- **C3_raw:** 835
- **C3_unit:** students graduating per year (B.Tech eligible cohort)
- **C3_source:** S507
- **C3_note:** Careers360 (aggregator), citing NIRF 2025: 673 of 835 eligible B.Tech students placed (one source gives 756 as an inconsistent alternate figure, treated as less reliable per the search tool's own cross-check), placement rate reported as 77% to 80.6% depending on source, B.Tech median package Rs 14 LPA. The institute's own NIRF 2025 filing (IR-O-U-0237) was not directly fetched as a PDF in this pass; recorded as aggregator-reported, not official-direct.
- **C4_raw:** 2
- **C4_unit:** count of active non-tech societies; followers NOT FOUND
- **C4_source:** S511; S512
- **C4_note:** Two named non-tech societies confirmed to exist: E-Cell NITK (entrepreneurship, Instagram handle ecellnitksurathkal found via a 2020 NITK Pulse student-media post, current activity and follower count NOT FOUND) and 180DC NITK (social-impact consulting, founded 2021, contact is an email address only, no Instagram handle found). No finance club or analytics club was found for NIT Surathkal after 3 distinct search attempts; if one exists it may sit inside the Dept. of Management Studies or the Students' Union, neither of which surfaced a dedicated finance/analytics page.
- **C5_raw:** none found
- **C5_unit:** (a) casebook, (b) external brand, (c) institute training
- **C5_source:** S511; S512
- **C5_note:** No society-published casebook found. NIT Surathkal is not among competitors.csv's confirmed casebook-publishing chapters. No external prep brand (CrackNonTech, NextLeap, etc.) claims a presence at NIT Surathkal. No institute-run non-tech training programme found distinct from the standard CDC's general placement-prep activity.
- **C6_raw:** 7
- **C6_unit:** months (Jan 2027 to estimated season start)
- **C6_source:** n/a (est.)
- **C6_note:** No NITK-specific placement-season start date found after 3 distinct search attempts. Same cross-NIT inference as NIT Trichy applied: season start recorded as 'August, est.' (low confidence); months from 15 Jan 2027 to August 2027 = 7.
- **C7_raw:** 0
- **C7_unit:** count (0 to 4+)
- **C7_source:** n/a
- **C7_note:** Not within 300 km of DTU/NSUT/Thapar/BIT Mesra (Karnataka, confirmed 0). No BeyondTech mentor or testimonial alumnus traced to NIT Surathkal (all six NOT FOUND per RA47/RA48). No confirmed DTU/NSUT society co-hosting example found for NITK. Not named in BeyondTech's ambassador-recruitment LinkedIn post (W13).
- **anchor_recruiters_found:** American Express
- **nontech_societies:** E-Cell NITK (entrepreneurship):NOT FOUND; 180DC NITK (social consulting):NOT FOUND
- **season_start_month:** August (est.)
- **evidence_gaps:** Official NITK CDC placement brochure PDF could not be retrieved (link structure on cdc.nitk.ac.in does not resolve to a direct file in search results). Follower counts for both named societies NOT FOUND. Finance and analytics club existence NOT FOUND, flagged as a real data gap rather than assumed absent. Season-start month is a cross-NIT estimate, not NITK-specific.

NIT Warangal

- **city:** Warangal
- **state:** Telangana
- **lat:** 17.984
- **lon:** 79.531
- **region:** South
- **btech_graduating:** 704 (2025-26 eligible cohort, aggregator-reported)
- **C1_raw:** 4
- **C1_unit:** count (of 20 anchors; aggregator-reported)
- **C1_source:** S514

- **C1_note:** Careers360's engineering-vertical 2025-26 analysis (S514) names EY India among 2025-season top recruiters, and separately reports Flipkart and Meesho among firms making offers in the early 2025-26 summer phase (200+ students with offers above Rs 20 LPA). A separate, undated Careers360 Q&A (not independently re-dated) lists Deloitte among companies that visit NIT Warangal, treated as weaker evidence since its currency could not be confirmed. Count of 4 (EY, Flipkart, Meesho confirmed to the 2025-26 season; Deloitte undated). No other anchors found after 3 distinct search attempts.
- **C2_raw:** 4
- **C2_unit:** count (non-tech recruiters of any kind)
- **C2_source:** S514; S515
- **C2_note:** EY India, Flipkart, Meesho (role unspecified, likely a mix of tech and business/analyst roles) and Deloitte (undated) are the only non-tech-adjacent names found; Collegedunia (S515) adds no further named consulting/finance firms distinct from this list. Sector-split not published.
- **C3_raw:** 704
- **C3_unit:** students graduating per year (B.Tech eligible cohort, 2025-26)
- **C3_source:** S514
- **C3_note:** Careers360's own 2025-26 analysis gives the eligible cohort as 704 with 660 placed as of its reporting date; the 2025 season (prior cohort) is separately reported as 697 placed with a placement range of 83% to 95.9% across branches (Careers360) or 81.4% (Shiksha, S515), figures conflict by source. Recorded figure (704) is the most recent aggregator-reported eligible-cohort size; no official NIT Warangal CCPD placement report PDF was located in this pass.
- **C4_raw:** 1
- **C4_unit:** count of active non-tech societies; followers NOT FOUND
- **C4_source:** S516
- **C4_note:** One non-tech society confirmed to exist: 180DC NIT Warangal (social-impact consulting), founded 2024 per its 180dc.org branch page, which gives only a campus address and contact email, no Instagram handle or follower count. No finance, analytics or entrepreneurship-club-specific page was found after 3 distinct search attempts (an older, undated PaGaLGuY article mentions an 'Innovation & Entrepreneurship Club' by name only, with no current activity evidence, so it is not counted as 'active' per the criterion's 6-month post requirement).
- **C5_raw:** none found
- **C5_unit:** (a) casebook, (b) external brand, (c) institute training
- **C5_source:** S516
- **C5_note:** No society-published casebook found. NIT Warangal is not among competitors.csv's confirmed casebook-publishing chapters. No external prep brand claims a presence at NIT Warangal. No institute-run non-tech training programme found.
- **C6_raw:** 7
- **C6_unit:** months (Jan 2027 to estimated season start)
- **C6_source:** n/a (est.)
- **C6_note:** No NIT Warangal-specific placement-season start date found after 3 distinct search attempts (the available dated evidence is for the summer/intern phase, described only as 'ongoing' in 2025 reporting with no start date given). Cross-NIT estimate applied: August (est.); months from 15 Jan 2027 to August 2027 = 7.
- **C7_raw:** 0
- **C7_unit:** count (0 to 4+)
- **C7_source:** n/a
- **C7_note:** Not within 300 km of DTU/NSUT/Thapar/BIT Mesra (Telangana, confirmed 0). No BeyondTech mentor or testimonial alumnus traced to NIT Warangal (NOT FOUND per RA47/RA48). No confirmed DTU/NSUT society co-hosting example found. Not named in BeyondTech's ambassador LinkedIn post (W13).
- **anchor_recruiters_found:** EY (EY India); Flipkart; Meesho; Deloitte (undated source)
- **nontech_societies:** 180DC NIT Warangal (social consulting):NOT FOUND
- **season_start_month:** August (est.)
- **evidence_gaps:** Eligible-cohort and placed-count figures conflict across sources by as much as 40+ students for the same stated season; the more recent, methodologically explicit Careers360 figure (704 eligible, 660 placed) was preferred. Deloitte's recruiter status could not be dated to a specific season. Finance/analytics club existence NOT FOUND. Season-start month is a cross-NIT estimate, not Warangal-specific.

NIT Calicut

- **city:** Kozhikode
- **state:** Kerala
- **lat:** 11.321973
- **lon:** 75.935386

- **region:** South
- **btech_graduating:** approximately 858 (UG 695 placed at an 81% UG placement rate implies an eligible base of roughly 858; see note)
- **C1_raw:** 2
- **C1_unit:** count (of 20 anchors; aggregator-reported, mixed currency)
- **C1_source:** S519
- **C1_note:** Accenture and American Express are named in a 2022 Collegedunia news item (S519) listing NIT Calicut's top recruiters (Accenture, American Express, Barclays, Samsung, Ola, Mphasis, Goldman Sachs). This is the only source found naming any of the 20 anchors for NIT Calicut; its currency (2022) is 3 years older than the deck's target season. Deloitte is separately confirmed for the 2025 season specifically (31 offers, per a top-recruiters-by-offer-count listing) but Deloitte is not on the fixed 20-firm anchor list, so it is NOT counted toward C1 (recorded in the note only). No other anchor (Bain, ZS, Eternal, JP Morgan Chase, Everest, PwC, L.E.K., Meesho, OYO, EY, KPMG, Accenture Strategy specifically as a sub-brand, Kearney, McKinsey, BCG, Fractal, Flipkart, Prism) found after 3 distinct search attempts including one site-restricted attempt at nitc.ac.in.
- **C2_raw:** 3
- **C2_unit:** count (non-tech recruiters of any kind)
- **C2_source:** S519
- **C2_note:** Accenture, American Express, Goldman Sachs (all from the 2022 Collegedunia list, S519); no 2025-specific sector-split or non-tech recruiter count was found. Deloitte (31 offers in 2025, strongest recruiter by offer count per one aggregator) is additionally relevant context though not an anchor-list firm.
- **C3_raw:** 858
- **C3_unit:** students graduating per year (B.Tech, estimated from 2025 UG offer and rate data)
- **C3_source:** S517
- **C3_note:** A Centre for Career Development summary PDF hosted on Collegedunia (not NITC's own site, S517) gives 2025 UG offers as 695 against an 81.00% UG placement percentage; back-calculating implies an eligible UG base of approximately 858 (695 / 0.81). This is an est. derived figure, not a directly stated graduating-batch count; the official NITC NIRF 2025 filing was not located as a fetchable PDF after 3 distinct search attempts (general search, site-restricted search, and a direct notice-board check which found only an undated 'stellar placement record' announcement, S518).
- **C4_raw:** 1
- **C4_unit:** count of active non-tech societies; followers NOT FOUND
- **C4_source:** n/a
- **C4_note:** Only one non-tech society could be confirmed to exist at all: the NIT Calicut Entrepreneurship Cell (E-Cell), described on a general wiki page as a student team active since an early college-level business-plan competition, with no Instagram handle, follower count, or confirmation of a post within the last 6 months found after 3 distinct search attempts. No consulting club (180DC or otherwise), finance club or analytics club was found for NIT Calicut specifically in any source checked; this is recorded as a genuine data gap, not an assumption of absence, since smaller clubs at this institute may simply lack any public web footprint found by this lane.
- **C5_raw:** 1 of 3
- **C5_unit:** (a) casebook, (b) external brand, (c) institute training
- **C5_source:** S700
- **C5_note:** Gate G2 rescue pass: institute-run non-tech training confirmed, one of the three sub-criteria. A two-month summer-vacation training program run by NIT Calicut's Centre for Career Development (then called the Training and Placement Cell) was credited by then-chairperson Dr. Sajith V as the main reason for the institute's strong 2022 placement results, run "keeping in mind the market demand for IT/Analytics firms" (S700, Collegedunia, 2022). No casebook (a) and no named external prep-brand ambassador presence (b) found after this second pass, same as the first pass. This citation is 2022-dated and secondary (aggregator news quoting the then-chairperson); no 2025 or 2026 confirmation that the same program still runs was found after 3 further search attempts in this pass, so treat the institute-training sub-criterion as confirmed historically, not confirmed current.
- **C6_raw:** 7
- **C6_unit:** months (Jan 2027 to estimated season start)
- **C6_source:** n/a (est.)
- **C6_note:** No NIT Calicut-specific placement-season start date found; the clearest dated signal is that 2025 UG placement data was already 'as on 25-09-2025' with offers well underway, implying a season start no later than August-September. Cross-NIT estimate applied: August (est.); months from 15 Jan 2027 to August 2027 = 7.
- **C7_raw:** 0
- **C7_unit:** count (0 to 4+)
- **C7_source:** n/a

- **C7_note:** Not within 300 km of DTU/NSUT/Thapar/BIT Mesra (Kerala, confirmed 0). No BeyondTech mentor or testimonial alumnus traced to NIT Calicut (NOT FOUND per RA47/RA48). No confirmed DTU/NSUT society co-hosting example found. Not named in BeyondTech's ambassador LinkedIn post (W13).
- **anchor_recruiters_found:** Accenture; American Express
- **nontech_societies:** E-Cell NIT Calicut (entrepreneurship):NOT FOUND
- **season_start_month:** August (est.)
- **evidence_gaps:** This college has the thinnest non-tech-society evidence of the four NITs scored: only one society (E-Cell) could be confirmed to exist at all, with no activity or follower evidence. Graduating-batch size is a back-calculated estimate, not a directly sourced figure, since the official NITC NIRF PDF could not be fetched. Recruiter evidence for the anchor list (C1) rests on a single 2022-dated aggregator article, the oldest C1 source used across all 9 colleges in this lane; flagged for the lead as the weakest-evidenced college in this batch.

IIIT Hyderabad

- **city:** Hyderabad
- **state:** Telangana
- **lat:** 17.4456
- **lon:** 78.3497
- **region:** South
- **btech_graduating:** 177 (NIRF 2025, B.Tech students placed; graduating batch size itself not separately disclosed in sources found)
- **C1_raw:** 1
- **C1_unit:** count (of 20 anchors; aggregator-reported, 2022-dated)
- **C1_source:** S521
- **C1_note:** Deloitte is the only one of the 20 anchors found in any source for IIIT Hyderabad, in a 2022-dated recruiter list (Bloomberg, Code Nation, Deloitte, Facebook, Google, HSBC, Indeed, Intuit, Jio, Nvidia, Qualcomm, Samsung, Swiggy, TCS, Uber, Walmart, Unacademy, Persistent). No 2025-season-specific recruiter list was found after 3 distinct search attempts; IIIT Hyderabad's placement reporting in all sources found emphasises top-line package figures (median, average, highest) rather than named firms by season. No other anchor found.
- **C2_raw:** 1
- **C2_unit:** count (non-tech recruiters of any kind)
- **C2_source:** S521
- **C2_note:** Only Deloitte is confirmed as non-tech-adjacent from the 2022 list; HSBC (finance) is also present in the same list and is counted alongside Deloitte, giving 2. Corrected count: 2. No sector-split published.
- **C3_raw:** 177
- **C3_unit:** students graduating per year (B.Tech, NIRF 2025 placed count used as the closest available proxy)
- **C3_source:** S520
- **C3_note:** Careers360 (aggregator) attributes to NIRF 2025 a figure of 177 B.Tech students placed, median package Rs 32 LPA. IIIT Hyderabad is a small, largely postgraduate-and-research-weighted institute (it runs a 5-year dual-degree B.Tech+MS as its principal UG route, not a standard 4-year B.Tech at NIT/VIT scale); 177 placed is used here as a ceiling-proxy for the graduating B.Tech batch size since no source separately disclosed a distinct 'graduating' figure apart from 'placed'. THIS COLLEGE LIKELY FAILS SCREEN F1 (B.Tech graduating batch of at least 600) on this evidence; flagged explicitly for the lead's screening step.
- **C4_raw:** 0
- **C4_unit:** count of active non-tech societies; followers NOT FOUND
- **C4_source:** S522
- **C4_note:** IIIT-H's Clubs Council (umbrella body) reports roughly 8 technical and 15 cultural clubs campus-wide, per the institute's own student-life blog, but no named consulting, finance, product or analytics club was identified among them after 3 distinct search attempts (one of which incorrectly surfaced an IIIT Bangalore, not IIIT Hyderabad, E-Cell page, excluded from this count). Recorded as 0 confirmed non-tech societies, a genuine gap, not a confident finding of zero; IIIT Hyderabad's own institute-wide Instagram account (not a society) has approximately 12,560 followers per an aggregator tracker (S523), included in the note only, not counted as a society.
- **C5_raw:** none found
- **C5_unit:** (a) casebook, (b) external brand, (c) institute training
- **C5_source:** n/a
- **C5_note:** No society-published casebook, no external prep brand presence, and no institute-run non-tech training found for IIIT Hyderabad in any source checked.
- **C6_raw:** 7
- **C6_unit:** months (Jan 2027 to estimated season start)

- **C6_source:** n/a (est.)
- **C6_note:** No IIIT Hyderabad-specific placement-season start date found after 3 distinct search attempts. No reliable cross-institute proxy exists either, since IIIT-H's placement calendar was not described in any source found as following the NIT or IIT convention. Recorded as August (est., low confidence, weakest-evidenced season-start estimate in this batch); months from 15 Jan 2027 to August 2027 = 7.
- **C7_raw:** 0
- **C7_unit:** count (0 to 4+)
- **C7_source:** n/a
- **C7_note:** Not within 300 km of DTU/NSUT/Thapar/BIT Mesra (Telangana, confirmed 0). No BeyondTech mentor or testimonial alumnus traced to IIIT Hyderabad (NOT FOUND per RA47/RA48). No confirmed DTU/NSUT society co-hosting example found. Not named in BeyondTech's ambassador LinkedIn post (W13).
- **anchor_recruiters_found:** Deloitte
- **nontech_societies:** None identified (0 confirmed non-tech societies)
- **season_start_month:** August (est.)
- **evidence_gaps:** This college is flagged as the most likely of the 9 to fail the PLAN.md section 7.2 screen: B.Tech graduating/placed base (177) is far under the F1 threshold of 600, and only 1 to 2 of the 20 anchor recruiters could be confirmed (also likely under the F2 threshold of 5, though F2's 'last two seasons' window could not be fully checked against a dedicated IIIT-H placement brochure, which was not locatable). Recommend the lead verify this screening call directly rather than relying solely on this row, since IIIT Hyderabad's placement reporting style (emphasising top-line packages over named recruiters or graduating-batch counts) made this lane's standard search approach weaker here than for the other 8 colleges.

BITS Pilani Hyderabad campus

- **city:** Hyderabad
- **state:** Telangana
- **lat:** 17.54649722
- **lon:** 78.5725
- **region:** South
- **btech_graduating:** 2883 (NIRF 2025, UG students graduating in minimum stipulated time, campus-wide UG figure inclusive of all programmes, not B.Tech-only)
- **C1_raw:** 3
- **C1_unit:** count (of 20 anchors; aggregator-reported, Hyderabad-campus-specific)
- **C1_source:** S526
- **C1_note:** A Hyderabad-campus-specific third-party listing names Deloitte, EY and KPMG among recruiters that visited the Hyderabad campus specifically (grouped under 'Technology, Consulting and Finance'). A separate, campus-wide (Pilani+Goa+Hyderabad combined, not Hyderabad-isolated) top-recruiters table additionally names EY, KPMG, HSBC, IBM, Accenture and Barclays, which is consistent with but does not independently add to the Hyderabad-specific count. No source found separately isolates JP Morgan Chase, Bain, ZS, Everest, PwC, L.E.K., Meesho, OYO, Accenture Strategy as a distinct sub-brand, Kearney, McKinsey, BCG, Fractal, Flipkart or Prism for the Hyderabad campus specifically after 3 distinct search attempts.
- **C2_raw:** 3
- **C2_unit:** count (non-tech recruiters of any kind)
- **C2_source:** S526
- **C2_note:** Deloitte, EY, KPMG counted as the confirmed Hyderabad-campus-specific non-tech recruiters. No sector-split (share of offers by role) was found for the Hyderabad campus specifically; campus-wide reporting emphasises quant/trading-firm packages (e.g. IMC Trading, Flow Traders at the Pilani campus) over a role-level breakdown.
- **C3_raw:** 2883
- **C3_unit:** students graduating per year (UG, campus-wide, NIRF 2025)
- **C3_source:** S524
- **C3_note:** Careers360 (aggregator) attributes to the BITS Pilani Hyderabad campus NIRF 2025 filing: 2,883 undergraduate students graduating in minimum stipulated time, of which 2,554 were placed (88.6%), UG median Rs 17.70 LPA. This figure is campus-wide across all of BITS Hyderabad's UG programmes (B.Pharm included alongside B.E./B.Tech-equivalent degrees at BITS), not isolated to B.Tech-equivalent engineering alone; recorded as the closest available official-filing-derived figure, with this scope caveat noted for the modeller.
- **C4_raw:** 2
- **C4_unit:** count of active non-tech societies; followers NOT FOUND
- **C4_source:** S528; S529

- **C4_note:** Two non-tech-relevant student bodies confirmed to exist: 180DC BITS Pilani Hyderabad (social-impact consulting, a leadership team including a President and Consulting Director is listed on its 180dc.org branch page, no social-media figures given) and the campus Entrepreneurship Cell (E-Cell), part of the Centre for Innovation, Incubation and Entrepreneurship, which runs the BITS Business Quiz and the annual 'Ground Reality' start-up challenge. A campus-wide (not Hyderabad-isolated) 'Finomaniac' finance club and a 'Business Analytics Club' are listed on a BITS Pilani student-clubs page that could not be confirmed as Hyderabad-specific rather than Pilani-main-campus-specific after 3 distinct search attempts; NOT counted in the raw 2, flagged as a likely undercount.
- **C5_raw:** partial (b)
- **C5_unit:** (a) casebook, (b) external brand, (c) institute training
- **C5_source:** competitors.csv row 2 (CrackNonTech)
- **C5_note:** (b) is the only element with any evidence: CrackNonTech's own site names 'BITS Pilani' among its alumni-presence colleges (competitors.csv, row 2, sourced S150), but does not specify which BITS Pilani campus (Pilani main, Goa or Hyderabad); this is the same ambiguity flagged for C7 below. Recorded as 'partial (b)' rather than a confirmed (b), since the claim cannot be isolated to the Hyderabad campus specifically. (a) no society-published casebook found for BITS Hyderabad specifically. (c) no institute-run non-tech training programme found distinct from the standard placement-cell activity.
- **C6_raw:** 7
- **C6_unit:** months (Jan 2027 to estimated season start)
- **C6_source:** n/a (est.)
- **C6_note:** BITS Pilani's own reporting shows its placement cycle for a graduating batch already 'ongoing' by August 2025 and continuing into a Phase 1 result announced January 2026; no single Day 1 date was found after 3 distinct search attempts. Recorded as August (est., moderate confidence, better evidenced than the NIT estimates since the Aug-2025-to-Jan-2026 cycle window is at least directly sourced for BITS specifically); months from 15 Jan 2027 to August 2027 = 7.
- **C7_raw:** 1
- **C7_unit:** count (0 to 4+)
- **C7_source:** W13 (R-A-beyondtech.md)
- **C7_note:** Not within 300 km of DTU/NSUT/Thapar/BIT Mesra (Telangana, confirmed 0 on that sub-criterion). No BeyondTech mentor or testimonial alumnus traced to BITS Pilani Hyderabad specifically (all six names NOT FOUND per RA47/RA48). No confirmed DTU/NSUT society co-hosting example found for BITS Hyderabad. PARTIAL CREDIT AWARDED (+1) for the ambassador-recruitment LinkedIn post sub-criterion: W13 records that BeyondTech's own LinkedIn post (about a month old as of the research date) recruited campus ambassadors explicitly naming 'DTU, NSUT, Thapar and BITS Pilani.' The post does not specify which BITS Pilani campus. Reasoning for awarding the point to Hyderabad rather than withholding it entirely: 'BITS Pilani' is BeyondTech's own chosen shorthand and is the institute's own public multi-campus brand name (the institute itself, in its official NIRF filings and most public communications, refers to Pilani, Goa and Hyderabad together under the single 'BITS Pilani' umbrella); a founder recruiting ambassadors by typing 'BITS Pilani' in a casual LinkedIn post is at least as likely to mean the brand broadly as to mean the Pilani campus narrowly, especially since BITS Hyderabad is the closest BITS campus to BeyondTech's other South-India outreach. This is a judgment call, not a sourced fact, and is flagged here explicitly for the lead to accept, reject, or split credit between this row and SC-1's Pilani-campus row at Gate G3.
- **anchor_recruiters_found:** Deloitte; EY; KPMG
- **nontech_societies:** 180DC BITS Pilani Hyderabad (social consulting):NOT FOUND; Entrepreneurship Cell / CIIE (entrepreneurship):NOT FOUND
- **season_start_month:** August (est.)
- **evidence_gaps:** Graduating-batch figure (2,883) is campus-wide across all UG programmes, not isolated to B.Tech/B.E.-equivalent engineering; this may overstate the true engineering-only addressable base and should be treated as an upper bound by the modeller. The C7 ambassador-post partial credit (+1) is a reasoned judgment call on an inherently ambiguous brief fact (W13), not a sourced certainty, and is the single most important item in this row for the lead to review directly before Gate G3. Finance/analytics club existence at the Hyderabad campus specifically (as opposed to the Pilani main campus) could not be confirmed.

VIT Vellore

- **city:** Vellore
- **state:** Tamil Nadu
- **lat:** 12.969193
- **lon:** 79.155968
- **region:** South
- **btech_graduating:** 5964 to 6194 (2023-24 UG B.Tech graduating cohort, official NIRF 2025 data submission, S703; see C3_note for the full 3-year table and the minimum-stipulated-time vs stipulated-time distinction)
- **C1_raw:** 2
- **C1_unit:** count (of 20 anchors; aggregator-reported)

- **C1_source:** S530
- **C1_note:** Deloitte and JP Morgan Chase are both named across two independent aggregator recruiter lists for VIT Vellore (one listing Microsoft, Airbnb, Amazon, PayPal, Qualcomm, Uber, Intel, J.P. Morgan, Deloitte, TCS, Infosys, Cognizant, Accenture; a second, overlapping list naming Deloitte again alongside Microsoft, Amazon, Google, Adobe, Qualcomm, Accenture). No other anchor (Bain, ZS, Eternal, Everest, PwC, L.E.K., Meesho, OYO, EY, KPMG, Accenture Strategy, Kearney, McKinsey, BCG, Fractal, Flipkart, Prism) found after 3 distinct search attempts, despite VIT Vellore's very large recruiter count (632 to 868 companies reported participating across different sources), suggesting these firms may simply not be in the small subset of named recruiters any aggregator chose to list, not necessarily that they do not visit; flagged as a genuine evidence gap given the scale mismatch.
- **C2_raw:** 2
- **C2_unit:** count (non-tech recruiters of any kind)
- **C2_source:** S530
- **C2_note:** Deloitte and JP Morgan Chase are the only confirmed non-tech-adjacent names; VIT Vellore's own reporting emphasises aggregate offer counts (14,044 offers in one season, 560 'Marquee' offers of Rs 20 LPA+) over a named non-tech breakdown. No sector-split published.
- **C3_raw:** 5964 (2023-24, graduating in minimum stipulated time); 6194 (2023-24, graduating in stipulated time)
- **C3_unit:** students graduating per year, UG 4-year B.Tech programs (official NIRF 2025 data submission)
- **C3_source:** S703
- **C3_note:** Gate G2 rescue pass: replaces the rough order-of-magnitude estimate with VIT's own official NIRF 2025 Engineering data submission (institute code IR-E-U-0490, fetched directly from vit.ac.in's NIRF-engineering flipbook, S703). The UG [4 Years Program(s)] table gives, for 2021-22 / 2022-23 / 2023-24 respectively: graduating in minimum stipulated time 6177 / 7053 / 5964; graduating in stipulated time 6435 / 7404 / 6194; students placed 4212 / 4923 / 4031; median salary of placed graduates Rs 8,00,000 / Rs 9,00,000 / Rs 8,99,000. The most recent year (2023-24) is used as the C3 raw figure. This confirms VIT Vellore's placement-reporting scale (632 to 868 recruiting companies per season, cited in the prior pass) sits alongside a UG graduating cohort an order of magnitude larger than any NIT in this batch, consistent with the prior estimate's direction but now backed by a tier-3 official source instead of a rough estimate.
- **C4_raw:** 1
- **C4_unit:** count of active non-tech societies; followers NOT FOUND
- **C4_source:** n/a
- **C4_note:** Only one non-tech-relevant society could be confirmed to exist at the Vellore campus specifically: GDSC VIT Vellore (Google Developer Student Clubs; this is a technology/developer club, not strictly a consulting/finance/analytics/entrepreneurship club per the criterion's own type list, so it is a borderline inclusion, counted here only because no stronger match was found). A 180 Degrees Consulting branch was found but it is explicitly the VIT Chennai (VITC) branch, a different campus, and is NOT counted toward VIT Vellore's total. No finance, analytics, product or dedicated entrepreneurship-cell page specific to VIT Vellore (as distinct from VIT Chennai or the VIT Business School, a postgraduate programme) was found after 3 distinct search attempts; VIT Vellore's club ecosystem may simply have weak public search visibility relative to its size, flagged as a likely undercount.
- **C5_raw:** none found
- **C5_unit:** (a) casebook, (b) external brand, (c) institute training
- **C5_source:** n/a
- **C5_note:** No society-published casebook found for VIT Vellore specifically. VIT Vellore is not among competitors.csv's confirmed casebook-publishing chapters or named external-brand alumni colleges. No institute-run non-tech training programme found distinct from the standard Career Development Centre's activity.
- **C6_raw:** 6
- **C6_unit:** months (Jan 2027 to confirmed season start)
- **C6_source:** S531; S532; S533
- **C6_note:** VIT's placement season Day 1 is consistently reported across multiple years and multiple source types (a university-affiliated campus news page, a national daily newspaper, and VIT's own 2017-18 Annual Report) as starting in mid-to-late July, with 'Super Dream' companies (CTC Rs 10 LPA+, which includes most non-tech/business/analyst roles) recruiting through July into the first week of August, followed by 'Dream' (IT and core) companies. This is the best-evidenced season-start month in this entire batch of 9 colleges (3 independently dated sources, one official). Recorded as July (sourced, not est.); months from 15 Jan 2027 to July 2027 = 6.
- **C7_raw:** 0
- **C7_unit:** count (0 to 4+)
- **C7_source:** n/a
- **C7_note:** Not within 300 km of DTU/NSUT/Thapar/BIT Mesra (Tamil Nadu, confirmed 0). No BeyondTech mentor or testimonial alumnus traced to VIT Vellore (NOT FOUND per RA47/RA48). No confirmed DTU/NSUT society co-hosting example found (the only 180DC branch found under the 'VIT' name is at VIT Chennai, a different campus, and is not itself evidence of a DTU/NSUT co-hosting event even there). Not named in BeyondTech's ambassador LinkedIn post (W13).

- **anchor_recruiters_found:** Deloitte; JP Morgan Chase
- **nontech_societies:** GDSC VIT Vellore (developer club, borderline non-tech fit):NOT FOUND
- **season_start_month:** July (sourced)
- **evidence_gaps:** C3 (graduating B.Tech base) is this row's weakest cell: no NIRF-filing figure was retrieved, and the recorded value is a rough order-of-magnitude estimate the lead should replace before scoring. VIT Vellore's sheer scale (hundreds of recruiters, tens of thousands of offers per season) makes aggregator 'top recruiter' lists a poor proxy for C1/C2, since they appear to list only a small, inconsistent subset of the true recruiter roster each time; the true anchor-recruiter overlap is plausibly higher than the 2 confirmed here and should be treated as a floor, not a ceiling, flagged explicitly for the lead.

Manipal Institute of Technology

- **city:** Manipal
- **state:** Karnataka
- **lat:** 13.35129
- **lon:** 74.79271
- **region:** South
- **btech_graduating:** 1755 (2023-24 UG B.Tech graduating cohort, official NIRF 2025 data submission, S702; validates the prior 1800-2200 estimate)
- **C1_raw:** 1
- **C1_unit:** count (of 20 anchors; aggregator-reported)
- **C1_source:** S535
- **C1_note:** KPMG is named alongside Bosch, HCL and ICICI Bank in one aggregator's top-recruiters list for the 2025 MIT Manipal (main campus, not the separate MIT Bengaluru sister campus) season. No other anchor (Bain, ZS, Eternal, JP Morgan Chase, Everest, PwC, Deloitte beyond an old 2019-20-dated mention, L.E.K., Meesho, OYO, EY, Accenture Strategy, Kearney, McKinsey, BCG, Fractal, Flipkart, Prism) found after 3 distinct search attempts. Search results repeatedly surfaced MIT Bengaluru (a distinct sister campus under the same MAHE university) placement data instead of MIT Manipal; those figures were explicitly excluded from this row per the source's own disambiguation.
- **C2_raw:** 33 (percent) OR 1 (count, if the percent figure is not usable)
- **C2_unit:** % share of offers by role (consulting+analytics+fintech combined), OR count of non-tech recruiters
- **C2_source:** S535
- **C2_note:** One aggregator reports a 2025 sector mix for MIT Manipal as: Consulting 14%, Analytics 7%, Core Engineering 26%, Core IT 27%, Fintech 12%. Summing Consulting + Analytics + Fintech (treating fintech as a finance/business-role proxy per the PLAN.md C2 definition) gives 33%, which is the best sector-split evidence found across all 9 colleges in this batch and should be preferred by the modeller over the fallback firm-count method. The fallback count (non-tech recruiters of any kind named) is only 1 (KPMG), included for completeness since the sector-split figure's underlying methodology (how the aggregator itself classified roles) could not be independently verified.
- **C3_raw:** 1755 (2023-24, graduating in minimum stipulated time)
- **C3_unit:** students graduating per year, UG 4-year B.Tech programs (official NIRF 2025 data submission)
- **C3_source:** S702
- **C3_note:** Gate G2 rescue pass: replaces the rough estimate with MIT Manipal's own official NIRF 2025 Engineering data submission (institute code IR-E-C-7252, confirmed distinct from the MIT Bengaluru sister campus by the institute name on the filing itself; fetched and extracted directly from cia.manipal.edu, S702). The UG [4 Years Program(s)] placement-and-higher-studies table gives, for 2021-22 / 2022-23 / 2023-24 respectively: graduating in minimum stipulated time 1879 / 1664 / 1755; students placed 1090 / 1136 / 1140; median salary of placed graduates Rs 8,00,000 / Rs 8,88,250 / Rs 8,50,000; students selected for higher studies 229 / 281 / 288. The most recent year (2023-24, 1755 graduating) is used as the C3 raw figure, closely validating the prior pass's 1800-to-2200 estimate.
- **C4_raw:** 1
- **C4_unit:** count of active non-tech societies; followers NOT FOUND
- **C4_source:** S536
- **C4_note:** One non-tech society confirmed to exist: The Consulting Club at MIT Manipal, described on the university's own careernext.manipal.edu page as dedicated to building management-consulting knowledge through networking sessions and workshops with industry professionals; no Instagram handle, follower count, or confirmation of a post within the last 6 months was found. No finance club, analytics club, or dedicated E-Cell page specific to MIT Manipal (the main engineering campus, as distinct from the separate Manipal postgraduate management school, SOM/MIM) was found after 3 distinct search attempts; flagged as a likely undercount given the institute's scale.
- **C5_raw:** 1 of 3
- **C5_unit:** (a) casebook, (b) external brand, (c) institute training
- **C5_source:** S701

- **C5_note:** Gate G2 rescue pass: institute-run non-tech training confirmed, one of the three sub-criteria. A 2020-dated student account on a Careers360 Q&A describes a pre-interview training program at MIT Manipal called EET, training students in aptitude, technical skills and communication skills using both external and internal trainers, with sessions starting about ten days before interviews, online test practice, group discussions and mock interviews (S701). This is a single student's forum answer, not an official MIT Manipal document, and no official page naming EET by name or confirming it still runs in 2025 or 2026 was found after 3 further search attempts in this pass; treat as confirmed-but-dated, not confirmed-current. No casebook (a) and no named external prep-brand ambassador presence (b) found, same as the first pass.
- **C6_raw:** 7
- **C6_unit:** months (Jan 2027 to estimated season start)
- **C6_source:** n/a (est.)
- **C6_note:** No MIT Manipal-specific placement-season Day 1 date was found after 3 distinct search attempts; the clearest dated signal is a 2025-26 interim update describing the season as 'about 75% complete' at the time of a campusutra.com report, with no start date given. Recorded as August (est., low confidence, by analogy to VIT Vellore and other large South Indian private engineering universities whose Day 1 typically falls in July-August); months from 15 Jan 2027 to August 2027 = 7.
- **C7_raw:** 0
- **C7_unit:** count (0 to 4+)
- **C7_source:** n/a
- **C7_note:** Not within 300 km of DTU/NSUT/Thapar/BIT Mesra (Karnataka, confirmed 0). No BeyondTech mentor or testimonial alumnus traced to Manipal Institute of Technology (NOT FOUND per RA47/RA48). No confirmed DTU/NSUT society co-hosting example found. Not named in BeyondTech's ambassador LinkedIn post (W13).
- **anchor_recruiters_found:** KPMG
- **nontech_societies:** The Consulting Club (MIT Manipal):NOT FOUND
- **season_start_month:** August (est.)
- **evidence_gaps:** C1, C3 and C6 are all estimate-dependent in this row; this is one of the two weakest-evidenced colleges in the batch alongside VIT Vellore, for the same underlying reason (a very large, multi-programme private institute whose public placement reporting emphasises top-line packages over NIRF-style structured disclosure). The C2 sector-split figure (33% consulting+analytics+fintech) is comparatively strong evidence and is this row's best data point; the lead should weight it accordingly. Search results for this institute repeatedly required disambiguation from its MIT Bengaluru sister campus, a confusion risk the lead should also watch for if re-researching this row.

RV College of Engineering Bengaluru

- **city:** Bengaluru
- **state:** Karnataka
- **lat:** 12.923925
- **lon:** 77.499661
- **region:** South
- **btech_graduating:** 1087 (NIRF 2025 cohort figure, UG 4-year programme, 2023-24 drive)
- **C1_raw:** 1
- **C1_unit:** count (of 20 anchors; aggregator-reported, mixed currency)
- **C1_source:** S539
- **C1_note:** Deloitte is confirmed for a recent season (named in a Careers360 top-recruiters list for RVCE, marked as updated March 2026, listing Deloitte Consulting India Pvt Ltd among others). KPMG appears only in a 2021-dated Collegedunia list (5 years old) and ZS Associates only in a 2020-22-dated mechanical-engineering-specific list; both are too old to count with confidence toward 'the last two placement seasons' per the C1 definition and are recorded in the note only, not in the raw count. Flipkart appears in a 2021-22-dated civil-engineering recruiter list, similarly excluded from the raw count on currency grounds. Raw count of 1 reflects only the Deloitte finding that could be dated to a recent season; the note flags that KPMG, ZS and Flipkart may well still visit RVCE but current-season evidence was not found after 3 distinct search attempts.
- **C2_raw:** 1
- **C2_unit:** count (non-tech recruiters of any kind, currently dated)
- **C2_source:** S539
- **C2_note:** Deloitte is the only non-tech-adjacent recruiter confirmed to a recent season. No sector-split published for RVCE.
- **C3_raw:** 1087
- **C3_unit:** students graduating per year (B.Tech, NIRF 2025, 2023-24 cohort)
- **C3_source:** S538
- **C3_note:** Careers360 (aggregator), citing the NIRF 2025 engineering filing: of 1,087 UG graduates, 831 were placed (about 76%), median package Rs 10.50 LPA. This is a reasonably well-sourced aggregator citation of an official filing, consistent in form with the

figures used for the 4 NITs in this batch.

- **C4_raw:** 0
- **C4_unit:** count of active non-tech societies; followers NOT FOUND
- **C4_source:** S540
- **C4_note:** RVCE's own Entrepreneurship Cell (E-Cell), founded 2007, is confirmed to exist with two named Instagram handles (ecell_rvce and rvce.ecell) found on the college's own E-Cell overview PDF (rvce.edu.in), but no current follower count was retrievable; the only engagement figure found (a 'Facebook reach of 100k during E-Summit 2017') is 9 years old and not a follower count. No consulting club, finance club or analytics club specific to RVCE was found after 3 distinct search attempts. Recorded raw count is 0 confirmed societies meeting the full criterion (active, with a post in the last 6 months), since E-Cell's current activity could not be confirmed; E-Cell's existence and handles are noted for the record even though it does not count toward the raw score as currently evidenced.
- **C5_raw:** none found
- **C5_unit:** (a) casebook, (b) external brand, (c) institute training
- **C5_source:** n/a
- **C5_note:** No society-published casebook found for RVCE specifically. RVCE is not among competitors.csv's confirmed casebook-publishing chapters or named external-brand alumni colleges. No institute-run non-tech training programme found distinct from standard placement-cell activity.
- **C6_raw:** 7
- **C6_unit:** months (Jan 2027 to estimated season start)
- **C6_source:** n/a (est.)
- **C6_note:** No RVCE-specific placement-season start date was found after 3 distinct search attempts. RVCE is a VTU-affiliated, Bengaluru-based autonomous private engineering college; by analogy to other large South Indian private/autonomous engineering colleges in this batch (VIT, Manipal), recorded as August (est., low confidence); months from 15 Jan 2027 to August 2027 = 7.
- **C7_raw:** 0
- **C7_unit:** count (0 to 4+)
- **C7_source:** n/a
- **C7_note:** Not within 300 km of DTU/NSUT/Thapar/BIT Mesra (Karnataka, confirmed 0). No BeyondTech mentor or testimonial alumnus traced to RV College of Engineering (NOT FOUND per RA47/RA48). No confirmed DTU/NSUT society co-hosting example found. Not named in BeyondTech's ambassador LinkedIn post (W13).
- **anchor_recruiters_found:** Deloitte
- **nontech_societies:** E-Cell RVCE (entrepreneurship, handles found but activity/followers NOT FOUND):NOT FOUND
- **season_start_month:** August (est.)
- **evidence_gaps:** C1 is likely understated here: KPMG, ZS Associates and Flipkart all appear in older (2020-2022) recruiter lists for RVCE and may still be active recruiters, but this lane could not confirm current-season presence for any of them within 3 search attempts each, so they were excluded from the raw count per the 'last two seasons' definition rather than counted on stale evidence. The lead may wish to treat RVCE's true C1 as a plausible 2 to 4 rather than the conservative 1 recorded, and commission one more targeted search (ideally a direct fetch of the rvce.edu.in official placement statistics page, which did not resolve to a readable document in this pass) before finalising the score.

BITS Pilani, Goa campus

- **city:** Zuarinagar, South Goa
- **state:** Goa
- **lat:** 15.39083333
- **lon:** 73.8775
- **region:** West and East
- **btech_graduating:** 630 (est.)
- **C1_raw:** 6
- **C1_unit:** count of 20 anchor recruiters visited, last two seasons
- **C1_source:** F04 (PLAN.md seed fact, institute-wide); S610
- **C1_note:** Institute-wide Pilani Placement Unit process across Pilani/Goa/Hyderabad campuses; could not isolate a Goa-only recruiter list for these 6 firms after 3 searches (S610, S611). Treat as est. upper bound for Goa specifically.
- **C2_raw:** 25%
- **C2_unit:** share of offers in analytics/consulting/finance/business roles (institute-wide sector split)
- **C2_source:** F04 (PLAN.md seed fact)

- **C2_note:** Same institute-wide caveat as C1: analytics 16% + banking/finance 7% + consulting 2% is the all-campus split (Pilani+Goa+Hyderabad), not Goa-isolated.
- **C3_raw:** 630
- **C3_unit:** B.Tech students graduating per year
- **C3_source:** S614, S611 (est.)
- **C3_note:** PagalGuy gives 665 BE seats across 8 specialisations; Collegedunia gives 600+; no official NIRF-style figure found for Goa campus specifically after 3 searches (BITS is not a standard NIRF UG discloser the way NITs/IITs are). Used midpoint 630 as est.
- **C4_raw:** 2 (BITS Goa Consulting Club/BGCC; 180 Degrees Consulting BITS Goa)
- **C4_unit:** count of active non-tech societies + combined Instagram+LinkedIn followers
- **C4_source:** S612, S613
- **C4_note:** Both confirmed active and Goa-specific. BGCC founded 2019, 40+ members (S612). 180DC Goa branch confirmed live (S613). No Instagram handle or follower count found for either after 3 searches each; followers NOT FOUND.
- **C5_raw:** 1 of 3 (partial a)
- **C5_unit:** count of 3 sub-criteria present: (a) casebook/prep programme, (b) named external brand ambassador, (c) institute-run training
- **C5_source:** S612, S613
- **C5_note:** (a) BGCC and 180DC-Goa exist as consulting clubs but no confirmed published casebook found specifically for Goa (counted as partial); (b) no CrackNonTech or other named-brand ambassador found at BITS Goa specifically; (c) no institute-run non-tech training found. CrackNonTech's own alumni-college list names 'BITS Pilani' generically (competitors.csv), ambiguous as to campus.
- **C6_raw:** 7 (est.)
- **C6_unit:** months between 15 Jan 2027 and next placement/internship season start
- **C6_source:** S610, S611
- **C6_note:** BITS Pilani's placement cycle is described as running through the year with a Day 1-style start; exact Goa-specific month not confirmed after 3 searches. Used August (common BITS Day-1 window) as est., giving 7 months to the next Aug 2027 occurrence.
- **C7_raw:** 1
- **C7_unit:** count 0 to 4+ of access bridges
- **C7_source:** R-A-beyondtech.md (RA35/W13); R-J-assets.md
- **C7_note:** 0 for same-city/under-300km (Goa is far from Delhi, Patiala and Ranchi); 0 for a confirmed BeyondTech mentor/testimonial alumnus (R-A-beyondtech.md RA47/RA48: none of the 6 named mentors/testimonials has a confirmed college, so no campus gets this point); 0 for a confirmed DTU/NSUT society co-host (none found); +1 partial credit because BeyondTech's own ambassador-recruitment LinkedIn post (W13/RA35) named 'BITS Pilani' without specifying a campus. Lead's own judgment call whether this partial credit should apply to the Goa campus specifically versus only the Pilani campus; flagged, not resolved by this scorer per PLAN.md section 0.3.
- **anchor_recruiters_found:** ZS Associates; Deloitte (USI or India); EY; Kearney; Accenture Strategy; KPMG
- **nontech_societies:** BITS Goa Consulting Club (BGCC):NOT FOUND;180 Degrees Consulting BITS Goa:NOT FOUND
- **season_start_month:** August (est.)
- **evidence_gaps:** C1/C2 figures are institute-wide, not Goa-isolated, after 3 searches each; C3 batch size is an aggregator-derived est., not an official NIRF figure (BITS does not appear to publish the same NIRF UG placement table NITs/IITs do); C4 follower counts NOT FOUND for both named societies after 3 searches each; C6 season-start month is est. from general BITS placement-cycle language, not a Goa-specific published calendar.

VJTI Mumbai (Veermata Jijabai Technological Institute)

- **city:** Mumbai
- **state:** Maharashtra
- **lat:** 19.022281
- **lon:** 72.856184
- **region:** West and East
- **btech_graduating:** 690
- **C1_raw:** 2
- **C1_unit:** count of 20 anchor recruiters visited, last two seasons
- **C1_source:** S603

- **C1_note:** Only Deloitte and PwC confirmed, and only via an aggregator-reported 2021 placement-drive table (72 and 54 students placed respectively); no 2024-25 or 2025-26 confirmation found after 3 searches. No Bain, EY, KPMG, McKinsey, BCG, Accenture Strategy, Flipkart or any of the other 18 anchors found for VJTI at all.
- **C2_raw:** 3 (aggregator-reported count of non-tech recruiters of any kind: Deloitte, PwC, Morgan Stanley)
- **C2_unit:** count of non-tech recruiters (no sector-split percentage found)
- **C2_source:** S603
- **C2_note:** Figures from the same dated (2021) aggregator table; a sector-split percentage (as BITS has) was not found for VJTI after 3 searches.
- **C3_raw:** 690
- **C3_unit:** B.Tech students graduating per year, 2023-24 cohort
- **C3_source:** S600 (official NIRF 2025 Engineering submission)
- **C3_note:** Official, tier-3 source: 690 B.Tech graduates, 570 placed, median Rs 10,90,000, in the 2023-24 NIRF cycle. Sanctioned annual intake is 540; the higher graduating figure reflects lateral entries and a multi-year cohort reconciliation per the NIRF table.
- **C4_raw:** 1 (E-Cell)
- **C4_unit:** count of active non-tech societies + combined Instagram+LinkedIn followers
- **C4_source:** S602
- **C4_note:** VJTI's own official 'Student Organizations' page lists only four clubs total (DLA, E-Cell, Fine Arts, Vishwa/Vishwa Space Club); only E-Cell (entrepreneurship) falls in C4's named categories (consulting, finance, product, analytics, entrepreneurship). No consulting, finance, product or analytics-specific society found after 3 searches. Followers NOT FOUND.
- **C5_raw:** 0 of 3
- **C5_unit:** count of 3 sub-criteria present
- **C5_source:** S602, S603
- **C5_note:** (a) no society-published casebook or prep programme found; (b) no named external prep-brand ambassador found; (c) no institute-run non-tech training found. VJTI is the thinnest C5 profile of all 10 colleges scored by this lane: no evidence of any of the three sub-criteria after 3 searches each.
- **C6_raw:** 7 (est.)
- **C6_unit:** months between 15 Jan 2027 and next placement/internship season start
- **C6_source:** S600, S601
- **C6_note:** No VJTI-specific placement-calendar start date was found after 3 searches; used August as est., consistent with the general Maharashtra engineering-college placement-season pattern (see COEP note), giving 7 months to Aug 2027.
- **C7_raw:** 0
- **C7_unit:** count 0 to 4+ of access bridges
- **C7_source:** R-A-beyondtech.md; R-J-assets.md
- **C7_note:** 0 for distance (Mumbai is far from Delhi, Patiala, Ranchi, all 1,000km+); 0 for a confirmed mentor/testimonial alumnus (none confirmed for any college per RA47/RA48); 0 for a DTU/NSUT society co-host (none found); 0 for the ambassador LinkedIn post (VJTI was not one of the four colleges named in W13).
- **nontech_societies:** E-Cell (VJTI):NOT FOUND
- **season_start_month:** August (est.)
- **evidence_gaps:** C1 recruiter list rests on a single dated (2021) aggregator table; no current (2024-25/2025-26) VJTI-specific recruiter breakdown was found after 3 searches, so C1 may understate current overlap. C4/C5 are both genuinely thin: VJTI's own official clubs page lists very few societies, none with a confirmed consulting, finance, product or analytics focus. C6 season-start month is est., not sourced to a published VJTI calendar.

COEP Technological University, Pune

- **city:** Pune
- **state:** Maharashtra
- **lat:** 18.53056111
- **lon:** 73.85678611
- **region:** West and East
- **btech_graduating:** 741
- **C1_raw:** 5
- **C1_unit:** count of 20 anchor recruiters visited, last two seasons
- **C1_source:** S608
- **C1_note:** EY, Flipkart, KPMG, Deloitte and PwC all named in aggregator-reported recruiter lists tied to COEP (S608); KPMG appears on a Department of Management Studies page specifically (S606/S607 context), so its applicability to the main B.Tech drive carries

a lower-confidence flag. No Bain or McKinsey found after 3 searches.

- **C2_raw:** 5 (count of non-tech recruiters of any kind: EY, Flipkart, KPMG, Deloitte, PwC)
- **C2_unit:** count of non-tech recruiters (no sector-split percentage found)
- **C2_source:** S608
- **C2_note:** A sector-split percentage was not found for COEP after 3 searches; using the count-of-firms fallback per PLAN.md section 7.4.
- **C3_raw:** 741
- **C3_unit:** B.Tech students graduating per year, 2023-24 cohort
- **C3_source:** S604 (official NIRF 2025 Engineering submission)
- **C3_note:** Official, tier-3 source: 741 students graduating in minimum time, 587 placed, median approx. Rs 10.5 lakh, 2023-24 cycle. COEP's own separate Placement Statistics 2024-25 document (S605) gives a narrower 2024-25 cohort figure of 630 enrolled/528 placed (84%), which the NIRF table's 741/587 figure does not exactly match; both are cited, not blended, per the project's source-hierarchy rule.
- **C4_raw:** 3 (COEP Consulting Club; Finance Club Committee under Dept of Management Studies; COEP Tech E-Cell)
- **C4_unit:** count of active non-tech societies + combined Instagram+LinkedIn followers
- **C4_source:** S606, S607
- **C4_note:** All three confirmed on COEP's own official pages. No analytics or product-specific society found after 3 searches. Followers NOT FOUND for all three.
- **C5_raw:** 1 of 3 (partial a)
- **C5_unit:** count of 3 sub-criteria present
- **C5_source:** S606, S607
- **C5_note:** (a) COEP Consulting Club and Finance Club Committee exist and run cases/workshops, but no confirmed published casebook was found specifically (counted as partial); (b) no named external prep-brand ambassador found; (c) no institute-run non-tech training found, though the Dept of Management Studies runs internships/placements support (S609) that is management-focused, not non-tech-placement-prep-focused.
- **C6_raw:** 7 (est.)
- **C6_unit:** months between 15 Jan 2027 and next placement/internship season start
- **C6_source:** S605, S609
- **C6_note:** No single confirmed 'Day 1' placement-season start month found after 3 searches; COEP's own forms show a UG summer internship starting 15 May and a longer B.Tech internship starting January, but the main campus-recruitment season start remains est. at August (common Maharashtra pattern), giving 7 months to Aug 2027.
- **C7_raw:** 0
- **C7_unit:** count 0 to 4+ of access bridges
- **C7_source:** R-A-beyondtech.md; R-J-assets.md
- **C7_note:** 0 for distance (Pune is far from Delhi, Patiala, Ranchi); 0 for a confirmed mentor/testimonial alumnus; 0 for a DTU/NSUT society co-host (none found); 0 for the ambassador LinkedIn post (COEP was not named in W13).
- **anchor_recruiters_found:** EY; Flipkart; KPMG (lower confidence, dept-page source); Deloitte; PwC
- **nontech_societies:** COEP Consulting Club:NOT FOUND;Finance Club Committee (Dept of Management Studies):NOT FOUND;COEP Tech E-Cell:NOT FOUND
- **season_start_month:** August (est.)
- **evidence_gaps:** KPMG's applicability to the main B.Tech placement drive (vs. the Dept of Management Studies specifically) is lower-confidence and should be re-checked before the dossier stage. C4/C5 follower counts and casebook confirmation are both open gaps. C6 season-start month is est., not sourced to a single published COEP calendar document.

VNIT Nagpur (Visvesvaraya National Institute of Technology)

- **city:** Nagpur
- **state:** Maharashtra
- **lat:** 21.123333
- **lon:** 79.051389
- **region:** West and East
- **btech_graduating:** 800 (est.)
- **C1_raw:** 2
- **C1_unit:** count of 20 anchor recruiters visited, last two seasons
- **C1_source:** S618

- **C1_note:** JP Morgan Chase and Deloitte (USI Consulting) both confirmed in aggregator-reported recruiter lists (S618). EY appears only in one low-quality Q&A snippet and is not counted with confidence. No Bain, McKinsey, BCG, ZS, KPMG, PwC, Accenture Strategy, EY, Everest, L.E.K., Kearney, Fractal, Flipkart, Meesho, OYO or American Express found after 3 searches.
- **C2_raw:** 2 (count of non-tech recruiters of any kind: JP Morgan Chase, Deloitte); Citicorp Finance India also named
- **C2_unit:** count of non-tech recruiters (no sector-split percentage found)
- **C2_source:** S618
- **C2_note:** A sector-split percentage was not found for VNIT after 3 searches; using the count-of-firms fallback.
- **C3_raw:** 800 (est.)
- **C3_unit:** B.Tech students graduating per year
- **C3_source:** S619, S615 (est.)
- **C3_note:** No official NIRF-style placement-and-graduation table was retrievable for VNIT's B.Tech cohort specifically after 3 searches (NIRF 2025 engineering rank of 44 was confirmed, but the placement-outcomes table itself was not reached). An institutional-overview source gives an incoming freshman class size of up to 798 across 8 disciplines; used 800 as est.
- **C4_raw:** 2 (180 Degrees Consulting VNIT; VNIT E-Cell)
- **C4_unit:** count of active non-tech societies + combined Instagram+LinkedIn followers
- **C4_source:** S616, S617
- **C4_note:** 180DC VNIT branch confirmed, founded 2023 (S616). E-Cell confirmed on VNIT's own official site, est. 2003, claims over 5,000 startups guided and 100,000+ students impacted cumulatively, not a follower count (S617). No finance, product or analytics-specific club found after 3 searches. Followers NOT FOUND for 180DC VNIT specifically.
- **C5_raw:** 1 of 3 (a)
- **C5_unit:** count of 3 sub-criteria present
- **C5_source:** S616
- **C5_note:** (a) 180 Degrees Consulting VNIT branch is confirmed active and pro-bono-consulting-focused, counted as present; (b) no named external prep-brand ambassador found; (c) no institute-run non-tech training found.
- **C6_raw:** 7 (est.)
- **C6_unit:** months between 15 Jan 2027 and next placement/internship season start
- **C6_source:** S647 (cross-NIT analogy)
- **C6_note:** No VNIT-specific placement-calendar start date was found after 3 searches. Used August as est. by analogy to the confirmed cross-NIT pattern (MNIT Jaipur's placement season runs 'first week of August through to March', S647; NIT Sikkim's 2026-batch season began 29 July), giving 7 months to Aug 2027. This is a cross-institute estimate, not a VNIT-specific confirmation; flagged lower confidence.
- **C7_raw:** 0
- **C7_unit:** count 0 to 4+ of access bridges
- **C7_source:** R-A-beyondtech.md; R-J-assets.md
- **C7_note:** 0 for distance (Nagpur is far from Delhi ~1,090km, Patiala, Ranchi ~700km+); 0 for a confirmed mentor/testimonial alumnus; 0 for a DTU/NSUT society co-host (none found); 0 for the ambassador LinkedIn post (VNIT was not named in W13).
- **anchor_recruiters_found:** JP Morgan Chase; Deloitte (USI Consulting)
- **nontech_societies:** 180 Degrees Consulting VNIT:NOT FOUND;VNIT E-Cell:NOT FOUND
- **season_start_month:** August (est., cross-NIT analogy)
- **evidence_gaps:** C1 list is thin (only 2 confirmed of 20) and EY is explicitly flagged low-confidence, not counted. C3 batch size is a cross-source est., not a confirmed NIRF or admissions-office figure. C6 season-start month is a cross-NIT analogy, not VNIT-specific; this is the weakest-evidenced cell for this college and should be re-checked directly against VNIT's Training and Placement Cell before the dossier stage.

NIT Rourkela (National Institute of Technology, Rourkela)

- **city:** Rourkela
- **state:** Odisha
- **lat:** 22.2534
- **lon:** 84.9012
- **region:** West and East
- **btech_graduating:** 901 (est.)
- **C1_raw:** 2
- **C1_unit:** count of 20 anchor recruiters visited, last two seasons
- **C1_source:** S621

- **C1_note:** Deloitte and Accenture (Strategy practice not separately confirmed) both named in the 2025 top-recruiter list (S621: 'Google, AMD, Qualcomm, Wells Fargo, JSW, Amazon, ExxonMobil, DE Shaw & Co, Accenture, Barclays, Deloitte'). EY appears only via alumni-outcome data (people who work there now), not confirmed campus recruitment, and is not counted. No Bain, McKinsey, BCG, ZS, KPMG, PwC, Everest, L.E.K., Kearney, Fractal, Flipkart, Meesho, OYO, JP Morgan or American Express found after 3 searches.
- **C2_raw:** 2 (count of non-tech recruiters of any kind: Deloitte, Accenture)
- **C2_unit:** count of non-tech recruiters (no sector-split percentage found)
- **C2_source:** S621
- **C2_note:** 373 companies made a combined 1,274 offers for B.Tech in the 2025 season per this source, described as 'software and IT dominated, with BFSI a smaller share'; no exact non-tech percentage given.
- **C3_raw:** 901 (est.)
- **C3_unit:** B.Tech students graduating per year
- **C3_source:** S625, S620 (est.)
- **C3_note:** Vedantu's highlights table gives a Total B.Tech Seat Intake of 901; the official NIRF 2025 engineering submission PDF (S620) was located but its placement/graduation table could not be retrieved in readable form within 3 attempts. Used 901 as est.
- **C4_raw:** 3 (Finance Club; Grapevine Business Club; Analytics and Consulting Club)
- **C4_unit:** count of active non-tech societies + combined Instagram+LinkedIn followers
- **C4_source:** S622, S623, S624
- **C4_note:** Finance Club confirmed on NIT Rourkela's own Student Activity Centre pages (S622). Analytics and Consulting Club confirmed via a profile source stating it was co-founded in August 2023 (S623, lower-confidence profile-aggregator source, not the club's own page). Grapevine Business Club confirmed via a news report of a joint event with the School of Management (S624, undated). Followers NOT FOUND for all three.
- **C5_raw:** 1 of 3 (a)
- **C5_unit:** count of 3 sub-criteria present
- **C5_source:** S623
- **C5_note:** (a) the Analytics and Consulting Club's stated purpose ('fostering an environment for learning and collaboration among students interested in analytics and consulting') is counted as a prep-programme-adjacent presence, though no confirmed published casebook was found; (b) no named external prep-brand ambassador found; (c) no institute-run non-tech training found.
- **C6_raw:** 7 (est.)
- **C6_unit:** months between 15 Jan 2027 and next placement/internship season start
- **C6_source:** S647 (cross-NIT analogy)
- **C6_note:** Same basis and same caveat as VNIT: no NIT Rourkela-specific calendar start date found after 3 searches; used August by cross-NIT analogy (S647), giving 7 months to Aug 2027. Lower-confidence, cross-institute estimate.
- **C7_raw:** 2
- **C7_unit:** count 0 to 4+ of access bridges
- **C7_source:** S648; R-A-beyondtech.md; R-J-assets.md
- **C7_note:** +2 for distance: NIT Rourkela to BIT Mesra (an existing BeyondTech campus) is approximately 185 to 250 km by road depending on route (S648: Rourkela-Ranchi 168 to 231 km plus 16 km Ranchi-to-Mesra), which is under the 300 km threshold. This is a genuine exception to the task brief's expectation that access would 'likely be 0 for all' this lane's colleges, confirmed here rather than assumed. 0 for a confirmed mentor/testimonial alumnus; 0 for a DTU/NSUT society co-host (none found); 0 for the ambassador LinkedIn post (NIT Rourkela was not named in W13).
- **anchor_recruiters_found:** Deloitte; Accenture (Strategy practice not separately confirmed)
- **nontech_societies:** Finance Club (NIT Rourkela):NOT FOUND;Analytics and Consulting Club:NOT FOUND;Grapevine Business Club:NOT FOUND
- **season_start_month:** August (est., cross-NIT analogy)
- **evidence_gaps:** C1 is thin (2 of 20 confirmed) and relies on a single aggregator source; EY appears only via alumni-outcome data and was deliberately excluded rather than counted on weak evidence. C3 batch size and C6 season-start month are both est., not NIT Rourkela-specific official confirmations. C7's +2 distance-to-BIT-Mesra finding should be verified against an actual road-route query (e.g. Google Maps) before the dossier stage, since the underlying sources disagreed by up to 65km.

Jadavpur University

- **city:** Kolkata
- **state:** West Bengal
- **lat:** 22.4989
- **lon:** 88.3714
- **region:** West and East

- **btech_graduating:** 868 (est.)
- **C1_raw:** 1
- **C1_unit:** count of 20 anchor recruiters visited, last two seasons
- **C1_source:** S628
- **C1_note:** Only Accenture confirmed, via an aggregator recruiter list (S628: 'Microsoft, Amazon, Google, De Shaw, TCS, Wipro, Accenture, Samsung, IBM, Infosys'). No Bain, McKinsey, BCG, ZS, Deloitte, EY, KPMG, PwC, Everest, L.E.K., Kearney, Fractal, Flipkart, Meesho, OYO, JP Morgan or American Express found after 3 searches. This is the weakest C1 profile of the 6 longlist colleges in this lane.
- **C2_raw:** 2 (count of non-tech recruiters of any kind: Accenture, Deutsche Bank)
- **C2_unit:** count of non-tech recruiters (no sector-split percentage found)
- **C2_source:** S628, S626
- **C2_note:** Deutsche Bank appears in a separate Careers360 major-recruiters list (S626: 'Microsoft, Honeywell, Amazon, Deutsche Bank, Capgemini, CDOT, Adobe, Bennet Colemann'), which does not overlap with S628's list, suggesting both are partial, year-unclear snapshots rather than one confirmed current list.
- **C3_raw:** 868 (est.)
- **C3_unit:** B.Tech students graduating per year, 2023-24 cohort
- **C3_source:** S627 (aggregator, cites NIRF-style figures)
- **C3_note:** 868 students graduated, 790 placed (per S627); a separate NIRF-attributed figure (via S626) gives 814 UG-4-year students placed for the same 2023-24 cycle, which is close but not identical to the 790 figure, consistent with the two sources using slightly different scopes (all UG-4yr placed vs. B.Tech-specific placed). Neither figure could be confirmed against JU's own official NIRF PDF directly within 3 attempts, so both are aggregator-reported, est.
- **C4_raw:** 1
- **C4_unit:** count of active non-tech societies; followers NOT FOUND
- **C4_source:** S704
- **C4_note:** Gate G2 rescue pass: one non-tech society confirmed at Jadavpur University's engineering faculty: FinClub JU, describing itself as the Finance & Consulting Club of Jadavpur University, publishing a Substack newsletter (launched approximately 2 to 3 years before this pass) offering study material, career guides, case studies and opinion pieces (S704). No Instagram or LinkedIn handle for the club was found after 3 further search attempts in this pass (searches for "FinClub" repeatedly surfaced the unrelated Finance and Investments Club at IIM Calcutta, handle finclub_iimc, which is NOT Jadavpur's club and is not counted here), so no follower count can be reported; the Substack gives no dated post confirming activity within the last 6 months either. This is the same society-confirmed-but-followers-NOT-FOUND pattern already used for NIT Calicut's E-Cell and MIT Manipal's Consulting Club elsewhere in this file. No analytics, product or dedicated E-Cell/entrepreneurship society was found for Jadavpur's engineering faculty specifically after this pass.
- **C5_raw:** 0 of 3
- **C5_unit:** count of 3 sub-criteria present
- **C5_source:** n/a
- **C5_note:** None of the three sub-criteria (society casebook, named external-brand ambassador, institute-run training) found after 3 searches. Jadavpur University has the highest confirmed 'prep vacuum' (i.e. the strongest case for an unmet need) of all 10 colleges scored in this lane, but also has the weakest confirmed recruiter overlap and society surface, illustrating the scorecard's own tension between demand-side fit and opportunity-side vacuum.
- **C6_raw:** 7 (est.)
- **C6_unit:** months between 15 Jan 2027 and next placement/internship season start
- **C6_source:** n/a
- **C6_note:** No Jadavpur-specific placement-calendar start date was found after 3 searches, and West Bengal state universities do not follow the NIT/IIT common calendar used as an analogy for VNIT and NIT Rourkela above. Used August as a general-pattern est. with lower confidence than the NIT cross-institute analogy; flagged NOT FOUND for a true source and treated as est. per task instructions.
- **C7_raw:** 0
- **C7_unit:** count 0 to 4+ of access bridges
- **C7_source:** R-A-beyondtech.md; R-J-assets.md
- **C7_note:** 0 for distance (Kolkata is far from Delhi, Patiala, and approx. 400km+ from Ranchi/BIT Mesra, over the 300km threshold); 0 for a confirmed mentor/testimonial alumnus; 0 for a DTU/NSUT society co-host (none found); 0 for the ambassador LinkedIn post (Jadavpur was not named in W13).
- **anchor_recruiters_found:** Accenture
- **nontech_societies:** FinClub JU (Finance & Consulting Club):NOT FOUND
- **season_start_month:** August (est., low confidence)

- **evidence_gaps:** Jadavpur University is the weakest-evidenced college in this lane across nearly every criterion: C1 (1 of 20), C4 (0 societies found), C5 (0 of 3), and C6 (no sourced calendar) are all either NOT FOUND-grade or est. with low confidence. This college fails screen F4 (at least 5 of 7 criteria sourced, not est.) on the evidence gathered here; the lead should treat this as a genuine screen-fail candidate pending any further research, not assume it clears F4 by default.

IIT Delhi

- **city:** New Delhi
- **state:** Delhi
- **lat:** 28.545
- **lon:** 77.19222222
- **region:** Contrast set
- **btech_graduating:** 1100 (est.)
- **C1_raw:** 6
- **C1_unit:** count of 20 anchor recruiters visited, last two seasons
- **C1_source:** S631, S632
- **C1_note:** Meesho, BCG, Accenture Strategy and Consulting, American Express, EY (GDS and Parthenon) and JP Morgan Chase all confirmed as 2025-26-season double-digit-offer recruiters per Careers360's reporting of IIT Delhi's own Office of Career Services data (S631: 'Accenture Strategy and Consulting, Amazon, American Express... Eternal, EXL Services, EY GDS, EY Parthenon... JP Morgan, Meesho...'; S632 UG-specific snapshot separately names BCG). This is the strongest and best-sourced C1 profile of all 10 colleges in this lane. No Bain, McKinsey, ZS, Deloitte, KPMG, PwC, Everest, L.E.K., Kearney, Fractal, Flipkart, OYO found in these specific lists after 3 searches, though their absence from a 'double-digit offers' list does not prove zero offers.
- **C2_raw:** 6 (count of non-tech recruiters of any kind, same 6 as C1; no separate sector-split percentage found)
- **C2_unit:** count of non-tech recruiters of any kind
- **C2_source:** S631, S632
- **C2_note:** Same sourcing as C1. A sector-split percentage was not found for IIT Delhi after 3 searches; using the count-of-firms fallback, though this count is itself unusually strong (official-style data, current 2025-26 season).
- **C3_raw:** 1100 (est.)
- **C3_unit:** B.Tech students graduating per year
- **C3_source:** S630 (est.); S629 (official NIRF PDF located but placement table not retrievable in readable form)
- **C3_note:** The NIRF 2025 PDF (S629) was located but its text-extraction output for the full-institute UG placement table returned only a department-level row (118 graduating, 99 placed), clearly not the whole-institute figure, so it was not used. A B.Tech total seat-intake figure of approximately 1,085 to 1,250 was found instead (S630, branch-wise seat matrix); used 1,100 as a conservative est. of the graduating cohort.
- **C4_raw:** 0 (no distinctly-named consulting or finance club confirmed with a web presence)
- **C4_unit:** count of active non-tech societies + combined Instagram+LinkedIn followers
- **C4_source:** S633
- **C4_note:** No 180 Degrees Consulting branch, and no distinctly-named undergraduate consulting or finance club, was found for IIT Delhi after 3 searches (compare to IIT Roorkee's Samadhan/Vittarth, IIT BHU's 180DC, IIT Guwahati's C&A, all found below). The Department of Management Studies (DMS) runs and wins external case competitions (S633: a national win at XLRI Delhi's Sirius Rising, a win at IIM Visakhapatnam's Consultimate 2.0), but this is a graduate-management-programme activity, not a named undergraduate society with a public casebook or follower base. This is a genuinely surprising finding against the task brief's working assumption that IITs would show strong C4/C5 society presence; recorded honestly rather than assumed.
- **C5_raw:** 0 of 3
- **C5_unit:** count of 3 sub-criteria present
- **C5_source:** S633
- **C5_note:** (a) no confirmed society-published casebook or structured non-tech prep programme found for IIT Delhi undergraduates specifically after 3 searches (DMS's case-competition wins are the closest adjacent evidence, but DMS is itself a management graduate department, not an undergraduate prep society); (b) no named external prep-brand ambassador found; (c) no institute-run non-tech training found. IIT Delhi scores the same (0 of 3) as Jadavpur University on this criterion based on public web evidence, which directly complicates the task brief's and PLAN.md section 4.3's working assumption that IITs would show a visibly smaller prep vacuum via 'alumni-run consulting clubs with free casebooks'. Flagged as the single most important finding of this lane for Gate G3.
- **C6_raw:** 11 (confirmed)
- **C6_unit:** months between 15 Jan 2027 and next placement/internship season start
- **C6_source:** S645, S646

- **C6_note:** IIT placement Phase 1 is confirmed to start 1 December across the common IIT calendar (S645: IIT Bombay 'started phase 1 of its final year placements on Thursday, December 1'; S646: IIT Kanpur's own official Phase I page for the 2025-26 batch; the same 1 December date is separately reported for IIT Roorkee). The next occurrence of this season after 15 Jan 2027 is December 2027, which is 11 months away. This is the highest (least favourable) C6_raw figure of all 10 colleges in this lane, since the already-passed Dec 2026 cycle sits before BeyondTech's Jan 2027 batch start.
- **C7_raw:** 2
- **C7_unit:** count 0 to 4+ of access bridges
- **C7_source:** R-A-beyondtech.md; R-J-assets.md
- **C7_note:** +2 for distance: IIT Delhi is in the same city (Delhi) as both DTU and NSUT, two of BeyondTech's four existing campuses. 0 for a confirmed mentor/testimonial alumnus (none confirmed for any college); 0 for a DTU/NSUT society co-host (none found); 0 for the ambassador LinkedIn post (IIT Delhi was not one of the four colleges named in W13: DTU, NSUT, Thapar, BITS Pilani).
- **anchor_recruiters_found:** Meesho; BCG; Accenture Strategy and Consulting; American Express; EY (GDS and Parthenon); JP Morgan Chase
- **season_start_month:** December (confirmed, cross-IIT)
- **evidence_gaps:** C1/C2 are the best-sourced of any college in this lane (official-style 2025-26 season data via Careers360's reporting of IIT Delhi OCS figures). C4/C5 are a genuine and important null finding, not a search failure: no named undergraduate consulting/finance club with a casebook was found after 3 distinct searches, directly cutting against the brief's and PLAN.md's assumption that IITs have an obviously smaller prep vacuum. C3 batch size is est. from a seat-matrix proxy, not a confirmed graduating-cohort figure, since the NIRF PDF's placement table could not be read cleanly.

IIT Roorkee

- **city:** Roorkee
- **state:** Uttarakhand
- **lat:** 29.86444444
- **lon:** 77.89638889
- **region:** Contrast set
- **btech_graduating:** 1102
- **C1_raw:** 4
- **C1_unit:** count of 20 anchor recruiters visited, last two seasons
- **C1_source:** S635
- **C1_note:** EY, Flipkart, American Express and Eternal (Zomato/Eternal Limited) all confirmed in the 2025-26 season top-recruiters list (S635: 'Amazon, American Express, Arcana, Bajaj Auto, BEL, BPCL, Centre for Development of Telematics, D. E. Shaw, Databricks, Eternal (Zomato), Flipkart, Google, Harness, and HPCL'; EY separately confirmed via S634's internship-season coverage). No Bain, McKinsey, BCG, ZS, Deloitte, KPMG, PwC, Everest, L.E.K., Kearney, Fractal, Meesho, OYO or JP Morgan found in these specific lists after 3 searches.
- **C2_raw:** 4 (count of non-tech recruiters of any kind, same 4 as C1; no separate sector-split percentage found)
- **C2_unit:** count of non-tech recruiters of any kind
- **C2_source:** S635, S634
- **C2_note:** Same sourcing as C1. One source separately notes that consulting made up only 11% of MBA (DoMS) summer-internship placements, 'behind marketing, IT and operations, and finance' (S636), which is MBA-specific, not B.Tech-specific, context.
- **C3_raw:** 1102
- **C3_unit:** B.Tech students graduating per year, 2023-24 cohort (NIRF-based, 'qualified' figure)
- **C3_source:** S634 (NIRF-based aggregator table)
- **C3_note:** A placement table citing the NIRF 2025 report gives 1,102 students qualified (i.e. graduating) and 769 placed for the 2023-24 B.Tech cohort, with a median of Rs 17 LPA. This is an aggregator's rendering of NIRF data, not a directly-fetched official PDF, so it carries a modest confidence discount versus VJTI/COEP's directly-fetched NIRF PDFs, but is the most specific figure found for IIT Roorkee after 3 searches.
- **C4_raw:** 2 (Samadhan, The Consulting Club; Vittarth, the finance club), both under the Department of Management Studies (DoMS)
- **C4_unit:** count of active non-tech societies + combined Instagram+LinkedIn followers
- **C4_source:** S636
- **C4_note:** Both confirmed by name via a DoMS-affiliated student forum post (S636), which also names several adjacent clubs (MarkIIT, Operazione, Vyavahr, Paradigm, Club Vishleshki). Important caveat: these clubs are explicitly described as DoMS (management-programme) clubs, so their reach into the broader undergraduate B.Tech population (as opposed to DoMS's own MBA-equivalent students) is unconfirmed after 3 searches. No equivalent broad-undergraduate consulting/finance club was found. Followers NOT FOUND for both.
- **C5_raw:** 1 of 3 (a)

- **C5_unit:** count of 3 sub-criteria present
- **C5_source:** S636
- **C5_note:** (a) Samadhan and Vittarth exist and are named consulting/finance clubs, counted as present despite the DoMS-affiliation caveat above; (b) no named external prep-brand ambassador found; (c) no institute-run non-tech training found.
- **C6_raw:** 11 (confirmed)
- **C6_unit:** months between 15 Jan 2027 and next placement/internship season start
- **C6_source:** S635, S645
- **C6_note:** IIT Roorkee's 2025-26 placement exercise is confirmed to have begun 1 December 2025 (S635: 'IIT Roorkee began its 2025-26 placement exercise on Dec. 1, 2025'), consistent with the common IIT calendar (S645). Same calculation as IIT Delhi: next occurrence after 15 Jan 2027 is December 2027, 11 months away.
- **C7_raw:** 2
- **C7_unit:** count 0 to 4+ of access bridges
- **C7_source:** S649; R-A-beyondtech.md; R-J-assets.md
- **C7_note:** +2 for distance: IIT Roorkee to Delhi (DTU/NSUT) is approximately 175 to 190 km by road (S649), under the 300 km threshold. This is a genuine exception to the task brief's expectation that access would 'likely be 0 for all' this lane's colleges, confirmed here. 0 for a confirmed mentor/testimonial alumnus; 0 for a DTU/NSUT society co-host (none found); 0 for the ambassador LinkedIn post (IIT Roorkee was not named in W13).
- **anchor_recruiters_found:** EY; Flipkart; American Express; Eternal (Zomato/Eternal Limited)
- **nontech_societies:** Samadhan, The Consulting Club (DoMS):NOT FOUND;Vittarth, Finance Club (DoMS):NOT FOUND
- **season_start_month:** December (confirmed, cross-IIT)
- **evidence_gaps:** C4/C5's two named clubs are DoMS-affiliated (management-programme clubs); whether they serve or are known to the broader B.Tech undergraduate population (BeyondTech's actual target) is an open gap that should be checked directly before the dossier stage, since this materially affects how much C5 'prep vacuum' credit IIT Roorkee should really get. C3's figure is aggregator-rendered NIRF data, not a directly-fetched PDF.

IIT (BHU) Varanasi

- **city:** Varanasi
- **state:** Uttar Pradesh
- **lat:** 25.26861111
- **lon:** 82.99027778
- **region:** Contrast set
- **btech_graduating:** 902 (est.)
- **C1_raw:** 4
- **C1_unit:** count of 20 anchor recruiters visited, last two seasons
- **C1_source:** S640, S639
- **C1_note:** Meesho and Flipkart confirmed in the 2024-25 top-recruiters list (S640: 'Google, Amazon, databricks, Piramal, Meesho, Microsoft, Uber, Samsung, Flipkart, McKinsey & Company'), which also names McKinsey directly. BCG confirmed via a separate 2024 recruiter list ('Consulting: McKinsey & Company, Boston Consulting Group'). No Bain, ZS, Deloitte, EY, KPMG, PwC, Everest, L.E.K., Kearney, Fractal, OYO, JP Morgan or American Express found after 3 searches.
- **C2_raw:** 4 (count of non-tech recruiters of any kind, same 4 as C1, plus Piramal as a business/non-tech recruiter)
- **C2_unit:** count of non-tech recruiters of any kind
- **C2_source:** S640
- **C2_note:** Same sourcing as C1; Piramal (named alongside Meesho in the same list) is an additional non-tech-type recruiter not on the fixed 20-anchor list, so it is noted here but not counted toward C1.
- **C3_raw:** 902 (est.)
- **C3_unit:** B.Tech students graduating per year
- **C3_source:** S638 (est.); S637 (official NIRF PDF located but UG table not retrievable in readable form)
- **C3_note:** The official NIRF 2025 Engineering Report PDF (S637) was located but its UG placement-and-graduation table could not be cleanly retrieved within 3 attempts (only a PG-table fragment was readable). A B.Tech annual intake figure of 902 seats plus 59 supernumerary (female-only) seats was found instead (S638); used 902 as a conservative est. of the graduating cohort.
- **C4_raw:** 1 (180 Degrees Consulting IIT BHU)
- **C4_unit:** count of active non-tech societies + combined Instagram+LinkedIn followers
- **C4_source:** S641
- **C4_note:** 180DC IIT BHU branch confirmed via its official 180dc.org page, founded 2022, with named leadership (Aishi M. Singh, President) and a contact email (iitbhu@180dc.org). No finance, product or analytics-specific club found after 3 searches. Followers

NOT FOUND.

- **C5_raw:** 1 of 3 (a)
- **C5_unit:** count of 3 sub-criteria present
- **C5_source:** S641
- **C5_note:** (a) 180 Degrees Consulting IIT BHU is confirmed active (pro-bono NGO/NPO consulting focus), counted as present; (b) no named external prep-brand ambassador found; (c) no institute-run non-tech training found.
- **C6_raw:** 11 (confirmed, cross-IIT analogy)
- **C6_unit:** months between 15 Jan 2027 and next placement/internship season start
- **C6_source:** S645 (cross-IIT analogy)
- **C6_note:** No IIT BHU-specific placement-start date citation was independently found in the 3 searches run for this college, but the common 1 December IIT Phase 1 start is independently confirmed for IIT Delhi, IIT Roorkee, IIT Bombay and IIT Kanpur (S645, S646, S635); applying the same calendar to IIT BHU as a cross-IIT analogy, consistent with how this project treats VNIT/NIT Rourkela's NIT-wide calendar analogy. Flagged as analogy-based, not independently confirmed for this specific institute.
- **C7_raw:** 0
- **C7_unit:** count 0 to 4+ of access bridges
- **C7_source:** R-A-beyondtech.md; R-J-assets.md
- **C7_note:** 0 for distance (Varanasi is far from Delhi ~800km, Patiala, and Ranchi ~400km+); 0 for a confirmed mentor/testimonial alumnus; 0 for a DTU/NSUT society co-host (none found); 0 for the ambassador LinkedIn post (IIT BHU was not named in W13).
- **anchor_recruiters_found:** Meesho; Flipkart; McKinsey & Company; BCG
- **nontech_societies:** 180 Degrees Consulting IIT BHU:NOT FOUND
- **season_start_month:** December (analogy-based, not independently confirmed for IIT BHU specifically)
- **evidence_gaps:** C3's graduating-cohort figure is an intake-seat proxy, not a confirmed graduating/placed figure, since the official NIRF PDF's UG table could not be read cleanly. C6's calendar-start month is a cross-IIT analogy for this specific institute, not independently confirmed; should be re-checked against IIT BHU's own Training and Placement Cell before the dossier stage.

IIT Guwahati

- **city:** Guwahati
- **state:** Assam
- **lat:** 26.187222
- **lon:** 91.691667
- **region:** Contrast set
- **btech_graduating:** 1008
- **C1_raw:** 5
- **C1_unit:** count of 20 anchor recruiters visited, last two seasons
- **C1_source:** S643
- **C1_note:** BCG, Deloitte, EY, Flipkart and American Express all named in a single aggregator's 2025 top-recruiters list (S643: 'Google, Amazon, BCG, Deloitte, EY, Flipkart, Goldman Sachs, Oracle, American Express, Zepto, Tata 1mg, Swiggy'). This list is explicitly flagged by the search tool as 'not from an official source', so it carries a confidence discount versus IIT Delhi's OCS-sourced C1. No Bain, McKinsey, ZS, KPMG, PwC, Everest, L.E.K., Kearney, Fractal, Meesho, OYO or JP Morgan found after 3 searches.
- **C2_raw:** 5 (count of non-tech recruiters of any kind, same 5 as C1)
- **C2_unit:** count of non-tech recruiters of any kind
- **C2_source:** S643
- **C2_note:** Same sourcing and same confidence caveat as C1. The same source separately notes 'around 260 recruiters hiring' across 'software, finance, analytics, core engineering, product, and consulting roles' in 2025, but gives no breakdown percentage.
- **C3_raw:** 1008
- **C3_unit:** B.Tech students graduating per year
- **C3_source:** S642 (official NIRF Engineering 2025 PDF, UG 4-year sanctioned intake figure)
- **C3_note:** The official NIRF Engineering 2025 submission (S642) gives a sanctioned UG [4 Years Program(s)] intake of 1,008 for 2023-24; this is a sanctioned-intake figure, not a confirmed graduating-cohort count, since the placement-outcomes portion of the same PDF was not retrievable in readable form within 3 attempts. Separately, aggregator placement figures for the same cycle disagree sharply (one gives 1,001 of 1,606 placed at 62%; another gives 1,200+ placed at 71%), so no placed-count figure is used here.
- **C4_raw:** 1 (Consulting & Analytics Club, C&A)
- **C4_unit:** count of active non-tech societies + combined Instagram+LinkedIn followers

- **C4_source:** S644
- **C4_note:** C&A confirmed via IIT Guwahati's own official site, operating under the institute's Technical Board since 2016, with stated divisions in Consulting and Data Analytics and an explicit goal of 'helping students move into management consulting and data analytics careers'. This is the most explicitly placement-prep-aligned named society found for any of the 4 IITs in this lane. No separate finance, product or entrepreneurship-specific club found after 3 searches. Followers NOT FOUND.
- **C5_raw:** 1 of 3 (a, strongest instance among all 10 colleges)
- **C5_unit:** count of 3 sub-criteria present
- **C5_source:** S644
- **C5_note:** (a) C&A's own stated mission is the closest match to a structured non-tech prep programme found anywhere in this lane (an explicit, long-running, institute-recognised club with a stated consulting/analytics career-prep purpose since 2016), though no specific published casebook document was separately confirmed, so this is counted as present rather than fully proven; (b) no named external prep-brand ambassador found; (c) no institute-run non-tech training found.
- **C6_raw:** 11 (confirmed, cross-IIT analogy)
- **C6_unit:** months between 15 Jan 2027 and next placement/internship season start
- **C6_source:** S645 (cross-IIT analogy)
- **C6_note:** Same basis and same caveat as IIT BHU: no IIT Guwahati-specific placement-start-date citation was independently found in the 3 searches run for this college; the common 1 December IIT Phase 1 pattern (independently confirmed for IIT Delhi, Roorkee, Bombay, Kanpur) is applied here as a cross-IIT analogy.
- **C7_raw:** 0
- **C7_unit:** count 0 to 4+ of access bridges
- **C7_source:** R-A-beyondtech.md; R-J-assets.md
- **C7_note:** 0 for distance (Guwahati is far from Delhi, Patiala and Ranchi, all 1,300km+); 0 for a confirmed mentor/testimonial alumnus; 0 for a DTU/NSUT society co-host (none found); 0 for the ambassador LinkedIn post (IIT Guwahati was not named in W13).
- **anchor_recruiters_found:** BCG; Deloitte; EY; Flipkart; American Express
- **nontech_societies:** Consulting & Analytics Club (C&A):NOT FOUND
- **season_start_month:** December (analogy-based, not independently confirmed for IIT Guwahati specifically)
- **evidence_gaps:** C1/C2's aggregator source is explicitly self-flagged as non-official by the search tool, a lower confidence tier than IIT Delhi's OCS-sourced figures. C3 uses a sanctioned-intake proxy, not a confirmed graduating/placed figure, since aggregator placement counts for the same cycle disagree by a wide margin (1,001 vs. 1,200+ placed) and neither could be reconciled to the official NIRF table within 3 attempts. C6 is a cross-IIT analogy, not independently confirmed for this institute.

Appendix D: Society and competitor datasets

D.1 DTU societies (`societies.csv`, 16 of a 30-row target, flagged honestly in doc section 10)

society	type	what_it_does	flagship_events	instagram_followers	linkedin_followers	confidence
DTU Consulting Group (DCG)	consulting	Student consulting society; self-description is that consulting is not yet an established culture at DTU and DCG exists	Case competition co-hosted with BeyondTech (2026	prize pool Rs 40	000+ per brief W15)	BeyondTech (case competition 2026)
180 Degrees Consulting DTU	consulting	Pro-bono consulting branch of the global 180DC network; delivers live consulting projects to NGOs, social enterprises an	DTU CaseBook (3 editions published); international client projects	1981	NOT FOUND	H

Appendix E: Glossary

Every acronym and abbreviated proper noun used across all six parts of this document, alphabetised. Where a term is also a company or society name, the expansion given is how that organisation itself states it, not an interpretation.

Abbreviation	Explanation
A01 to A34	This document's own assumption IDs (PLAN.md section 5.3, model_tables.md T16): a bear, base and bull figure with a stated basis, used wherever a number is modelled rather than measured
ACV	Annual contract value, a unit-economics term for the yearly revenue a single customer contract represents
AICTE	All India Council for Technical Education, the statutory regulator for technical education in India
APM	Associate Product Manager, an entry-level non-tech recruiter role profile
ASCI	Advertising Standards Council of India, the self-regulatory body whose education-sector and influencer-disclosure guidelines bound this plan's claims (section 23.2)
BCG	Boston Consulting Group, a named consulting-sector recruiter and casebook publisher referenced across the competition and demand research
BFC	Business, Finance & Consulting Club, NIT Tiruchirappalli's umbrella student body covering 180DC, ProfNITT and SIGMA
BHU	Banaras Hindu University, as in IIT (BHU) Varanasi, one of the plan's four contrast-set IITs
BITS	Birla Institute of Technology and Science, as in BITS Pilani (Pilani, Goa and Hyderabad campuses)
B.Tech	Bachelor of Technology, the undergraduate engineering degree this entire plan addresses
CAC	Customer acquisition cost, the cash spent per enrolment, the model's primary channel-efficiency metric (T3, T4, T6)
CAGR	Compound annual growth rate, a market-sizing metric named in this document's framework catalogue
CCPA	Central Consumer Protection Authority, the regulator behind the 2024 coaching-sector misleading-advertisement guidelines
CDGC	Career Development and Guidance Centre, PEC Chandigarh's own placement cell
COEP	College of Engineering, Pune, now formally COEP Technological University, one of the plan's four locked picks
CPC	Cost per click, a paid-media pricing unit used in the channel benchmarks (Lane F)
CPL	Cost per lead, the paid-media pricing unit the model actually uses for Meta and LinkedIn channel assumptions (A11, A12)
CPM	Cost per thousand impressions, a paid-media pricing unit referenced but not pinned to a single figure in the model (ruling F-C1)
CTC	Cost to company, the standard Indian term for a recruiter's total annual compensation offer
DAA	Dean of Academic Affairs, the PEC Chandigarh office whose letters set the institute's internship-registration calendar
DCG	DTU Consulting Group, co-organiser and co-judge of this case competition, and BeyondTech's current co-branded case-league partner
DPDP	Digital Personal Data Protection Act, 2023 (and its 2025 Rules), India's data-protection statute governing student data collection
DTU	Delhi Technological University, BeyondTech's core existing campus and the subject of Pillar 1 of this plan
EIC	Entrepreneurship and Incubation Cell, PEC Chandigarh's own entrepreneurship society and this plan's PEC entry wedge
ENE	Environmental Engineering, one of DTU's named non-circuital branch groups

Abbreviation	Explanation
ERRC	Eliminate, Reduce, Raise, Create, the Blue Ocean Strategy framework used for the competitive strategy canvas (section 7)
Fit score	This plan's own composite college-ranking score (0.25 C1 + 0.15 C2 + 0.15 C3 + 0.15 C4 + 0.10 C5 + 0.10 C6 + 0.10 C7, maximum 5.00), never a published external rating
GDGoC	Google Developer Groups on Campus, the 2024 rename of Google Developer Student Clubs (GDSC)
GDSC	Google Developer Student Clubs, the pre-2024 name for what is now GDG on Campus
IIIT	Indian Institute of Information Technology, as in IIIT Delhi, IIIT Allahabad and IIIT Hyderabad, all three screened out on batch size (F1)
IIM	Indian Institute of Management, referenced for its consulting-club casebooks and case-competition precedents (Lane D, Lane G)
IIT	Indian Institute of Technology, the four contrast-set institutes (Delhi, Roorkee, BHU Varanasi, Guwahati) shown in the scorecard but excluded from the final four
ISP	Internshala Student Partner, Internshala's own campus-ambassador programme, a named precedent in Lane G
J&K	Jammu and Kashmir, named specifically in this plan's India-map accuracy requirement (section 14.5)
JTBD	Jobs to be done, the behavioural-segmentation framework used for the student-segment analysis (section 6)
KPI	Key performance indicator, the unit of every target in the measurement tree (section 22, T13)
LinkedIn	The professional social network that is BeyondTech's own primary paid-channel and organic-channel platform throughout this plan
LOR	Letter of Recommendation, one of the incentive-ladder rewards named in Lane G's ambassador-programme research
LPA	Lakh per annum, the standard Indian salary unit (one lakh equals 100,000) used throughout this document's compensation figures
MBB	McKinsey, Bain and Company, abbreviation for the three most senior global strategy-consulting firms, used once in the competitor research (RD33)
MCE	Mechanical and Automation Engineering, one of DTU's named circuital branch groups
MECE	Mutually exclusive, collectively exhaustive, the issue-tree discipline applied to the DTU funnel-leak analysis (section 9)
MLSA	Microsoft Learn Student Ambassadors, the pre-2026 name for what is now Microsoft Student Ambassadors
MNIT	Malaviya National Institute of Technology, as in MNIT Jaipur, a longlist North-region college
MNNIT	Motilal Nehru National Institute of Technology, as in MNNIT Allahabad, a longlist North-region college
NIRF	National Institutional Ranking Framework, the Government of India ranking exercise whose institute-submitted data is this plan's preferred tier-3 source for intake, placement and salary figures
NIT	National Institute of Technology, as in NIT Tiruchirappalli, NIT Warangal, NIT Surathkal, NIT Rourkela, NIT Kurukshetra, NIT Jalandhar and NIT Calicut, all on the plan's longlist
NSUT	Netaji Subhas University of Technology, one of BeyondTech's four existing core campuses alongside DTU, Thapar and BIT Mesra
PECOSA	PEC Old Students' Association, PEC Chandigarh's alumni association
PEC	Punjab Engineering College, now PEC Chandigarh (a deemed university), one of the plan's four locked picks
P&L	Profit and loss, the per-campus launch economics statement structure used in T10
PPO	Pre-placement offer, an internship-to-full-time conversion offer, named in the PEC dossier's recruiter research
PS-I, PS-II	Practice School I and II, BITS Pilani's own named industry-internship stints that structure its two-phase placement calendar
RAG	Red, Amber, Green, the three-tier status convention used throughout the risk register (section 23.1)
SAM	Serviceable addressable market, the non-tech-open share of DTU's TAM that the model actually targets (T1)
SIP	Summer Internship Program, named in COEP's Department of Management Studies research
SOM	Serviceable obtainable market, the targeted-penetration slice of DTU's SAM that the model's enrolment targets draw from (T1)
T1 to T16	This document's own model-table IDs (model/model_tables.md), the single source of truth for every modelled number cited with an [M T#] tag
TAM	Total addressable market, here DTU's entire B.Tech population in years 2 to 4 before any non-tech-open filter is applied (T1)
UGC	University Grants Commission, the higher-education regulator whose advertising and campus-commercial-activity rules were checked in Lane H
UTM	Urchin Tracking Module, the standard URL-tagging convention this plan uses to attribute leads to a specific channel (section 22.3)

Abbreviation	Explanation
YIIC	Young Innovators India Challenge, Scaler's school-level (not college-level) outreach programme, confirmed distinct from a true campus ambassador programme (ruling G-C3)
ZS	ZS Associates, a named anchor recruiter across the brief, the fixed 20-firm recruiter list and multiple college dossiers

Appendix F: Data conflicts and rulings

Data conflicts and rulings (Gate G1, 10 Oct 2026)

The lead rules on every conflict logged by the brief transcription (PLAN.md section 3.3, X1-X6) and by Lanes A, B and C (step B4). Writers cite these rulings, never the raw conflicting rows, per PLAN.md section 0.3 ("do not resolve a conflict yourself" applies to verifiers, not to this gate). This file becomes Appendix F of the research document per PLAN.md section 9.2.

Source hierarchy used throughout (PLAN.md section 6.2): brief > BeyondTech's own pages > official institute documents > regulators > company pages > national press > aggregators > blogs.

From the brief transcription (PLAN.md section 3.3)

#	Conflict	Ruling
X1	"40 selections/14 organisations" (B04) vs "50+ so far" (B05)	Use "50+ selections" as the headline figure throughout (it is the brief's own later, more specific traction statement). Quote "40 selections across 14 organisations" only once, as the brief's own at-a-glance framing, never as a second independent figure alongside the 50+.
X2	13 to 14 LPA average, 47 LPA highest at Eternal (brief, B05) vs ₹15 LPA average, ₹60 LPA highest (website, W02)	Use the brief's figures (13 to 14 LPA average, 47 LPA highest at Eternal) on every DTU-specific slide, since B05 is this season's figure and is case-canon. The website's figures are an undated, broader lifetime marketing claim (confirmed by RA16/W02, no season stated) and are not used anywhere in the deck. If the doc needs to mention the discrepancy (section 3's conflicts table), it may, once, as evidence of inconsistent self-reporting, not as a second number to cite.
X3	11-week bootcamp (brief, B07) vs 12 listed weeks and an "8 Month Course / 12 Months" stat line (website, W02, W03)	Say "11-week bootcamp" everywhere, matching the brief (case-canon). The doc's section 3 notes the site's own internal inconsistency (12 listed weeks, one of which is a graduation project with no new content, against an "8 Month / 12 Months" stat line that does not match either number) as a site-hygiene observation only, not as a number used anywhere else.
X4	Two mentors (brief) vs four (website, W09, RA confirms via live fetch)	Use four: Harsh Agarwal (Founder), Subham Mukhopadhyay (Associate, Bain & Co.), Subrat Sarangi (Business Analyst, Amazon), Akshit Goel (Product Manager, Google). Confirmed live by V-A; this is simply the brief under-reporting relative to the site, not a true conflict.
X5	"13 to 14 LPA average (one of the highest)" (B05) vs DTU's own campus-wide figures	Ruled jointly with the new Lane B conflict below (RB07/RB13/RB14 vs seed F01/F02). BeyondTech's 13 to 14 LPA figure sits close to, not above, DTU's own official 2023-24 median of ₹13,25,000 (RB07). The deck never claims BeyondTech's average beats the DTU campus average or median; it instead notes the figure is credible precisely because it tracks the institute's own median rather than inflating it, which is a trust point, not a differentiation point.
X6	"Tier-1" undefined in the brief	Definition stands as drafted in PLAN.md section 3.3: institutes of national importance and state flagships whose B.Tech median CTC and recruiter list overlap the four core campuses. Operationalised by the screen in PLAN.md section 7.2. No change.

New conflicts from Lane A (BeyondTech and its founder)

#	Conflict	Ruling
A-C1	WhatsApp prefilled message text: seed wording vs the live /contact page's actual text (RA25)	Use the live-fetched wording wherever the deck or doc quotes the WhatsApp CTA. Trivial drift, not worth flagging again.

#	Conflict	Ruling
A-C2	Location of the "Request a callback" CTA: seed implied /contact, live fetch found it only on /placement-mastery (RA20, RA29)	Use the corrected location (/placement-mastery) if the doc or deck ever needs to name which page carries this CTA.
A-C3	Company LinkedIn follower count: 3,018 (seed) vs 3,017 (RA31, live fetch) vs "3K" (lead's own live screenshot, RA54)	Cite as "approximately 3,000" throughout, never a false-precision exact figure, since the count visibly drifts between captures taken hours apart.
A-C4	Topmate ratings count: page header shows "514", the page's own structured description field shows "14" (RA42)	Use "14" everywhere (matches the seed and the structured data field, which is the more credible of the two self-inconsistent numbers per V-A's own reasoning). Never cite "514" anywhere; it is very likely a mislabelled view-count or display bug, not a ratings count.
A-C5	Suhani Sharma's employer: seed had none; live page shows "Bain & Company" (RA06)	Not a true conflict. Use "Bain & Company", confirmed twice (RA06's text fetch and the lead's own screenshot of the testimonial card showing the Bain logo).
A-C6	Testimonial count: seed and the first research pass both recorded 3 (Ayush Pratap Singh, Suhani Sharma, Ravi); a live screenshot shows 5 (RA51)	Use all 5 named testimonials wherever the deck or doc discusses BeyondTech's proof points: Ayush Pratap Singh (Business Analyst, Meesho), Suhani Sharma (Analyst, Bain & Company), Ravi (Business Analyst, OYO), Soumya Raj (ExxonMobil), Vidhi Balyan (ZS). See A-C8 below on what this means for the fixed anchor-recruiter list.
A-C7	Two LinkedIn pages both named "Beyond Tech": the page used throughout this lane has approximately 3,000 followers; a second page surfaced in a sidebar has 922 followers (RA52)	Use only the approximately-3,000-follower page everywhere. It is the one the case brief's own hyperlink resolves to (B21), which settles the question: that is the canonical page. The 922-follower page is not cited anywhere in the doc or deck; it is most likely a stale duplicate, a differently-run page of the same name, or an artefact of LinkedIn's own indexing, and resolving which is not material to this project.
A-C8 (new ruling, not a direct conflict)	Soumya Raj's testimonial names ExxonMobil, which is not on the fixed 20-firm anchor-recruiter list in PLAN.md section 7.3	ExxonMobil is used as additional DTU proof-point evidence on slide 3 or 4 (the diagnosis/actors slides), strengthening the density of BeyondTech's own traction story. It is NOT added to the fixed anchor-recruiter list in section 7.3, and the college-scorecard criterion C1 (recruiter overlap) is not recomputed against it. Reopening the fixed list after Lane C has already done deep selection-process research against the locked 20 would cascade rework for a single data point; the scorecard's job is to rank colleges by overlap with BeyondTech's core, already-confirmed recruiter base (the 11 brief-named firms plus the 9 added by the plan), not to chase every single name that ever appears in a testimonial. Vidhi Balyan's recruiter (ZS) is already on the fixed list, so no action needed there.

New conflicts from Lane B (DTU)

#	Conflict	Ruling
B-C1	DTU placement figures, three-way mismatch: seed F01 (1,486 of 2,442 placed, ~61%, avg ₹15.45 LPA, median ₹15.00 LPA, 350+ companies, ~1,766 offers) vs DTU's own official NIRF 2025 submission (RB07: 2023-24 cohort, 2,412 graduated, 1,759 placed, median ₹13,25,000) vs Getmyuni (RB13/RB14: registered 2,487, placed 1,766 to 1,831 depending on which figure on the page, rate 60.8%, average ₹15.75 LPA)	Retire seed F01 entirely; it does not independently reconcile to any single source once checked. Going forward: (1) for the **graduated/placed/median** triplet, cite DTU's own official NIRF 2025 data submission (RB07) and name the cohort explicitly: "DTU's 2023-24 graduating B.Tech cohort: 2,412 graduated, 1,759 placed (about 73%), median salary ₹13,25,000", which is tier-3 official data and outranks every aggregator. (2) For **average package, highest package, branch-wise detail and company count**, which the NIRF submission does not carry, cite Getmyuni (RB13 to RB17) explicitly labelled "aggregator-reported, 2025 placement season" and carrying "est." framing per the source hierarchy, e.g. "aggregator-reported average package of ₹15.75 LPA for the 2025 season (Getmyuni)". Never blend the NIRF cohort figures and the Getmyuni season figures into one sentence as if they describe the same year or the same base.
B-C2	Highest-package recruiter at DTU: seed F02 ("Eternal, about ₹55 LPA") vs brief B05 ("highest of 47 LPA at Eternal") vs Getmyuni's actual 2025-season highest (RB15: ₹85 LPA domestic, B.Tech Software Engineering, offered by Atlassian; Eternal not named in that context at all)	Retire seed F02 entirely; no source supports "~55 LPA" for Eternal. Use the brief's own figure (B05, "highest of 47 LPA at Eternal") only when discussing BeyondTech members' own outcomes specifically, since that is case-canon about BeyondTech's own placed students, not a claim about DTU's campus-wide highest package. Separately, if the doc or deck ever needs DTU's campus-wide highest package (context only, not a BeyondTech claim), cite Getmyuni's RB15 figure (₹85 LPA, Atlassian) with its own source line. Never present these as the same statistic.

#	Conflict	Ruling
B-C3	Seed F03's eight-firm recruiter list (BCG, McKinsey, Bain, Deloitte, Bank of America, Deutsche Bank, Fractal, SmartCube) does not appear together on any single fetched page; Careers360 (RB20) confirms Bank of America/Deutsche Bank/Fractal/SmartCube but explicitly not BCG/McKinsey/Bain/Deloitte (RB21); CollegeSearch.in (RB27) confirms BCG/McKinsey/Deloitte/Goldman Sachs/JP Morgan but not the other four; Getmyuni (RB18) separately confirms Bain and Deloitte	Do not present F03 as one verified list anywhere. When citing DTU's consulting/analytics recruiter base: Bain, Deloitte and JP Morgan Chase are the most solid (each independently confirmed by at least one source and also named in the case brief itself, B05/B06, which is tier 1). BCG and McKinsey are "reported by CollegeSearch.in (aggregator)" only. Bank of America, Deutsche Bank, Fractal and SmartCube are "reported by Careers360 (aggregator)" only. Always attribute to the specific aggregator when citing any of these six names; never present all eight as a single confirmed set.
B-C4	DTU's own (university-wide) Instagram follower count, internally inconsistent within one search result (RB43: ~6,051 vs ~25,000 followers, same account, undated)	Not used anywhere in the doc or deck. This figure is irrelevant to BeyondTech's own campaign planning (it describes DTU's institutional account, not a channel BeyondTech would run ads on or partner with) and is unreliable besides. Dropped entirely.

New conflicts and gaps from Lane C (demand for non-tech roles)

#	Conflict	Ruling
C-C1	"Prism" (brief B06, named as an NSUT recruiter) could not be identified as a specific company after 6 total search attempts across two lanes (V-C's 3 attempts, logged RC28; and the candidate-company check against PrismHR, Prism Johnson, Prism Consulting Group Singapore, and a Prism hospitality listing in Gurugram, none confirmed)	"Prism" is quoted exactly as the brief names it (B06) wherever the deck or doc lists NSUT's recruiters, with no expansion, no inferred full company name, and no linked claim about what it does or pays. It is NOT added to the fixed 20-firm anchor-recruiter list (section 7.3) and is NOT counted in any college's recruiter-overlap score (criterion C1), since an unverifiable name cannot be checked against any other college's recruiter list. This is a "cite the brief's own words, build nothing analytical on top of them" ruling, consistent with PLAN.md section 2.1's content-integrity rule: the brief's own fact is preserved verbatim (never silently dropped), but nothing is fabricated to fill the gap around it.
C-C2	India test-preparation market size: Ken Research (USD 11.6 billion, 2025, RC74) vs IMARC Group (USD 244.10 million, 2024, RC75), a roughly 47x gap with no reconcilable scope stated by either source	Neither figure is cited anywhere in the deck. The doc's market-context section (section 5 or 7 per PLAN.md 9.2) may mention, once, that published test-prep market-size estimates for India disagree by close to 50x depending on scope, as evidence that this project's bottom-up, college-by-college sizing method (PLAN.md section 7, the scorecard; section 8, the model) is deliberately not anchored to a top-down market figure. This is consistent with the plan's existing instruction (section 6.3, Lane C item 6) that this item is context only, never the deck's actual sizing method.
C-C3	India Skills Report candidate sample size varies sharply by edition and even within the same edition: 2024 edition "88 lakh youths" vs 2025 edition "over 6.5 lakh candidates" (RC73) vs 2026 edition "over 100,000" in one summary and "more than 700,000" in another (RC72)	Use only the 2025 edition figure (RC73: over 6.5 lakh candidates, 54.81% employability, Wheebox/ETS, over 1,000 corporations across 15 industries), since it is the one internally consistent, single-sourced claim among the three. The 2024 and 2026 editions are not cited anywhere. If the doc's section 5 discusses graduate employability context, it cites RC73 alone, dated to its own edition year, never averaged or blended with the other editions.

Gaps carried forward, not resolved at this gate (no fabrication, flagged for later lanes or the lead)

- **societies.csv is at 16 of its 30-row target** (Lane B). The eight bare-name-only societies (Enactus DTU, Round Table DTU, Kalakriti DTU, AIMS-DTU, Semicon DTU, EMCEE DTU, ACM DTU, Deb Soc DTU) and the shortfall in product/analytics/data-science/department societies remain open. This does not block Gate G2 (which gates on the college scorecard, not on DTU's own society count), but the lead will make one more targeted pass before the DTU society-partner table (doc section 10, slide 5) is written, since that slide needs at least 6 well-evidenced society rows, not 30 thin ones.
- **8 brand-partnership precedent examples at DTU specifically (Lane B item 7) returned zero results.** The only confirmed example is the BeyondTech x DCG competition itself, which is the subject of this research, not an external precedent. Lane G (precedents for campus-by-campus expansion, not yet dispatched) is instructed to cover this gap at the national level if DTU-specific examples remain unavailable; PLAN.md section 6.3 Lane G items 1 to 3 already scope this broadly enough to compensate.
- **DTU's official T&P Cell structure, internship/placement calendar for Oct 2026 to Sep 2027, and Engifest/Invictus/Yuvaan 2026-27 dates remain unconfirmed** (Lane B gaps 3, 4, 5). The model's calendar-fit criterion (C6, section 7.4) and the DTU activation calendar (doc section 11, slide 5) will use the one dated anecdote found (RB44, ECE mid-terms late September, marked est.) plus the commonly cited 1 August placement-season start (carried from PLAN.md's own drafting, itself an estimate) rather than a confirmed official calendar. Both are marked "est." wherever cited.

- **25-plus-firm non-tech recruiter detail table (firm, role, CTC, branch, CGPA, month, offers) for DTU specifically was not found** (Lane B gap 2). What exists is recruiter *names* (RB18, RB20, RB27) and separately, *role and process* detail from Lane C's recruiter-by-recruiter research (RC03 to RC54), which is national/general rather than DTU-specific. The writer of doc section 8 (DTU in numbers) combines these two lanes explicitly, never implying DTU-specific process detail that Lane C's research did not actually confirm for DTU.

Gate G1, continued (10 Oct 2026, after Lanes D, F, G)

PLAN.md section 12's execution table gates G1 on all nine lanes (A through J), not just A through C. The lead ran an early partial pass above after the first batch to unblock drafting; this section rules on the second batch (D, F, G) and the gate stays open for a final pass after the third batch (H, I, J) before step B7 (the college scorers) begins, per PLAN.md's own sequencing.

From Lane D (competitors)

#	Conflict	Ruling
D-C1	Seed F08's CrackNonTech price (Rs 8,999 struck from Rs 35,000) cannot be reconfirmed; the live site shows a dynamic countdown with no price at all (RD02)	Do not cite any CrackNonTech price anywhere in the doc or deck. Every other element of F08 (8-week fellowship, "100% refund guarantee" framing, 1,500+ placed, 50,000+ community, 4.7 of 5 rating, DTU/BITS Pilani/NSUT/AKTU alumni, founder Jitendra Kumar) is independently reconfirmed and may still be cited. Assumption A01 (BeyondTech's own fee) keeps its existing bear/base/bull bracket (Rs 8,000 to 18,000) without leaning on CrackNonTech's now-unconfirmable price point.
D-C2	CrackNonTech's own site is internally inconsistent on support duration: "18 Months Placement Support" vs an FAQ saying "up to one year"	If cited at all, use "up to 18 months" (the more prominently featured figure) and do not resolve the inconsistency further; it is CrackNonTech's own site hygiene issue, not this project's to fix.
D-C3	Seed F09's NextLeap EMI (about Rs 1,322 a month) could not be reconfirmed anywhere; NextLeap's own fetched pages show no price at all, and the only proxy is a non-PM-specific aggregator figure of about Rs 27,499 (RD, Course Report)	Do not cite the Rs 1,322 a month EMI figure anywhere. If the doc needs a directional price-tier comparison for product-management prep, it may say competitor pricing in this category is "aggregator-reported in the Rs 25,000 to 40,000 range, not independently confirmed on the provider's own site," never a precise EMI number.
D-C4	NextLeap PM Fellowship duration is inconsistent even within one aggregator (16 weeks on one page, 12 weeks on another), and neither matches NextLeap's own site, which states no duration	Do not cite an exact week count for NextLeap's duration. If needed, say "roughly 3 to 4 months, aggregator-estimated."
D-C5	"PM School," named as a separate product-prep competitor in the plan's Lane D scope, was acquired by NextLeap in February 2025 and is no longer independent (Inc42, cited by V-D)	Treat PM School and NextLeap as one competitor, not two, in any count, comparison table or logo wall. If PM School is mentioned, it is described as "now part of NextLeap (acquired February 2025)," never listed as a separate line next to NextLeap.

From Lane F (channel and funnel benchmarks)

#	Conflict	Ruling
F-C1	Meta India CPM, CPC and CPL figures disagree across every source checked, including against seed F10; CPM in particular is not reproduced by any 2026 source found	Retire seed F10's exact figures as a single citation. For the model's assumption A11 (Meta CPL), use a CPL range informed by the lane's own multi-source synthesis, roughly Rs 150 to 600, attributed to "multiple India ad-benchmark publishers, 2026, figures vary by source" rather than to one pinned figure. Do not cite a specific Meta CPM anywhere in the deck; CPL is the decision-relevant unit for the model and is reasonably bracketed, CPM is not.
F-C2	LinkedIn India general CPC (seed F11, Rs 150 to 650) is independently confirmed (RF15); a narrower education-specific sub-range (Rs 150 to 450) was also found (RF14)	F11 stands confirmed, not retired. For assumption A12 (LinkedIn CPL), the modeller may use the narrower education-specific range if a tighter estimate is wanted; both are legitimate, attributed to their specific scope (general vs education-sector).
F-C3	WhatsApp India conversion claims (90 to 98% open rate, 45 to 60% conversion) recur across many vendor blogs but trace to the same uncredited circa-2021 claim with no disclosed primary source	Do not use these specific percentages anywhere in the model or the doc. Assumption A07 (event registrant to lead) keeps its originally scoped bear/base/bull range rather than being recalibrated to an unsourced marketing-blog consensus figure.
F-C4	Assumption A25's follower bands (5,000 to 20,000 and 20,000 to 100,000) do not match how any 2026 India influencer rate card actually segments tiers (the real convention splits nano/micro at 10,000 followers)	Instruction to the modeller (MD) at step B9: recalibrate A25's stated bands to nano (under 10,000) and micro (10,000 to 100,000) when building the assumptions register, keeping the same bear/base/bull cost figures unless Lane F's rate-card data (RF rows) suggests otherwise.

#	Conflict	Ruling
F-C5	Assumptions A26 (gated-content capture rate) and A27 (monthly organic visitors to the resources page) remain the two weakest-evidenced assumptions in the entire register; no bootcamp-specific or India-specific source was found for either after a genuine search effort	No change to the assumptions themselves; both already carry wide bear-bull bands per PLAN.md section 5.3. The doc's assumptions-register section (appendix) flags these two explicitly as "low confidence, no comparable public benchmark found" rather than presenting them with the same confidence as the better-evidenced assumptions.

From Lane G (expansion and trust precedents)

#	Conflict	Ruling
G-C1	Seed F12's "4,000+ ambassadors" at Coding Ninjas almost certainly conflates ambassadors with a separate, larger teaching-assistant programme; the company's own sourced material puts the actual ambassador count closer to 1,000 (RG02)	Retire F12's "4,000+" figure. Use "approximately 1,000 ambassadors across 1,000-plus campuses" (the more recent, company-sourced figure) as the benchmark informing assumption A14 (ambassador-sourced enrolments per ambassador per season).
G-C2	Coding Ninjas' own ambassador and campus counts differ by era (500 ambassadors and 350 colleges in an older, undated account vs 1,000-plus in a 2022-era company blog)	Cite only the more recent, dated, company-sourced figure (approximately 1,000 ambassadors, 2022 onward). Do not present the older figure as current.
G-C3	A confirmed "Scaler campus ambassador" page turned out to describe the Young Innovators India Challenge, a school-level (Class 11-12) outreach programme for Scaler School of Technology, not a college-level ambassador programme comparable to BeyondTech's target audience	Do not cite "Scaler's campus ambassador programme" as a college-level precedent anywhere. If Scaler is mentioned at all in the doc's precedent discussion, it is labelled explicitly as "Scaler's school-outreach programme, not college-level," and Coding Ninjas and Internshala's ISP remain the primary ambassador-economics precedents this deck relies on.
G-C4	Internshala's ISP (Internshala Student Partner) programme's exact cycle dates differ between an unfetched search snippet and the page V-G independently fetched	Describe the ISP programme generically, as a recurring, re-opened campus-partner cohort programme, without citing one fixed calendar date range as if it were permanent.
G-C5	Physics Wallah's offline centre counts across two different capture dates cover different geographic scopes (203 centres/141 cities, India only, Oct 2024, vs 303 centres/152 cities, India plus Middle East, Jun 2025) and are not directly comparable	Not used anywhere in this deck; Physics Wallah's offline expansion is not a close enough precedent to BeyondTech's campus-by-campus model to be worth citing, and this conflict is logged only so neither figure is mistakenly used elsewhere.

Confirmed from this batch, no action needed

- Two named, dated, directly-fetched third-party quotes validating the "trust before paid acquisition" mechanism (PLAN.md section 4.7's refinement) are confirmed and ready for slide 8 and doc section 17: **Ghazal Alagh**, co-founder, Mamaearth, on Tanmay Bhat's "The NextLevel Podcast" (reported by Storyboard18, 27 Feb 2024): "Parents trust other parents... when a mother tells another mother of experience, that has the most trust." **Nithin Kamath**, co-founder and CEO, Zerodha, interview with the Economic Times (quoted in Business Today, 20 Jan 2025): "You don't look at an ad and decide to invest in stocks... It's always a friend or family member who influences you." Both satisfy the "named, dated, specific, credible publication" quality bar from the skill's rhetoric guide (`references/rhetoric.md` pattern 7). No third or fourth quote survived five further search attempts; per PLAN.md section 4.7's own fallback, the mechanism also stands on the Rogers (1962) / Moore (1991) / Cialdini (1984) / Granovetter (1973) citations, all confirmed to their correct original years.
- Rogers, Moore, Cialdini and Granovetter citations (PLAN.md Lane G item 4) are confirmed accurate: Rogers 1962 (Diffusion of Innovations), Moore 1991 (Crossing the Chasm, the "beachhead" concept), Cialdini 1984 (Influence, social proof), Granovetter May 1973 (American Journal of Sociology, vol 78, issue 6, pp 1360 to 1380, "The Strength of Weak Ties").

Gate G1, final pass (10 Oct 2026, after Lanes H, I, J)

All nine research lanes are now complete. This is the third and final G1 ruling pass, closing the gate before step B7 (college scorers) opens.

From Lane H (claims and compliance rules)

#	Conflict	Ruling
H-C1	Every CCPA coaching-guideline and ASCI clause in Lane H's findings is sourced to a secondary summary (law-firm or news commentary), not the primary regulation text, which could not be fetched as readable content from any official source tried	The doc's compliance section (slide 10, doc section 23) never states a specific clause number or exact statutory wording as settled fact. It presents each claim as "reported by [named secondary source]" and frames the resulting "claims we can/cannot make" table as a conservative working guide, not a legal opinion. This is consistent with PLAN.md's content-integrity rule that precision never exceeds what the source supports.
H-C2	DPDP Act's "educational institution" exemption reach is disputed between two secondary sources (one broader, one child-safety-only)	BeyondTech is treated as a standard data fiduciary with no exemption claimed anywhere in the doc or deck. This is the safer reading regardless of which secondary source is right, and avoids relying on an exemption that may not even apply to a private placement-prep company in the first place.
H-C3	Whether a WhatsApp opt-in must explicitly name "WhatsApp" is disputed between vendor guides, and Meta's own fetched page is silent on the point	The recommended practice (doc section 23, slide 10) defaults to the more cautious reading: opt-in language explicitly names WhatsApp as the channel. This satisfies both interpretations found.
H-C4	Insight I8 (PLAN.md section 4.5) frames the "guaranteed selection" claim bar as unqualified; Lane H's sources describe a possible substantiation carve-out under ASCI but not under CCPA	I8 is restated in the doc as "an asymmetric advantage, not a certain legal shield": BeyondTech's practice of citing only verified, consented, named outcomes is good practice and lower-risk than a competitor's blanket guarantee claim, without asserting that any specific competitor claim has been found unlawful.

From Lane I (public student voice)

#	Finding	Ruling
I-R1	Of 37 verified quotes, only NSUT (6 quotes) and NIT Surathkal (2 quotes) are tied to a named campus; DTU itself yielded zero quotes under this lane's platform/attribution rules, and 29 of 37 quotes are campus-unspecified, skewed toward one competitor's (Internshala) review thread	The doc never implies broader or more even student-voice coverage than this lane actually produced. Where DTU-specific student sentiment is needed, the doc draws on BeyondTech's own DTU testimonials (Lane A, RA06 and RA51, which are named, consenting, published endorsements, a different and stronger evidence class) rather than this lane's anonymous quotes. Where this lane's quotes are used (for example, theme T4, cost/trust concerns, or T8, off-campus difficulty), they are explicitly framed as general engineering-student sentiment gathered from Quora, not DTU-specific or longlist-college-specific findings, since the lane's own coverage does not support that narrower claim.
I-R2	A named, consenting, published interview (a DTU alumnus, now a Bain analyst, in a 180 Degrees Consulting DTU Substack post dated 6 Jun 2025) was found and correctly excluded from the anonymous-quote table since it falls outside the four scoped platforms and the subject is named and consenting, not an anonymous platform poster	This quote may be used separately, by name, with full attribution to the 180DC DTU Substack post and its date, wherever the doc discusses DTU-specific student experience (for example, doc section 6 or section 10, the DTU society map). It is treated as a distinct, stronger evidence class from Lane I's anonymous quotes, not folded into the V-ID table.

From Lane J (map and logo assets)

#	Finding	Ruling
J-R1	All 32 institutions (28 from the longlist plus 4 contrast-set IITs) got verified coordinates; DTU's figure (28.74994722, 77.11702778) confirms the plan's own worked example in section 14.6 to three decimal places	No conflict; the pin-placement method in section 14.6 can proceed as drafted using these coordinates directly.
J-R2	The India outline was obtained as a high-fidelity GeoJSON (760 features, 36 states and union territories, confirmed to include Jammu and Kashmir, Ladakh, Andaman and Nicobar Islands and Lakshadweep, verified directly by the lead against the downloaded file) rather than the SVG the plan's Lane J instruction preferred	Accepted; PLAN.md section 6.3 Lane J already allows GeoJSON as an alternative format. **Recommendation for Stage 2 (step D1):** given this file's confirmed political-extent accuracy, the lead should default to the native fallback map (`figma.createNodeFromSvg` equivalent built from this GeoJSON, PLAN.md section 14.6 step 4) rather than spending a generation attempt on the hybrid base-art map for India specifically, since the acceptance risk the hybrid approach was designed to manage (a generated map truncating J&K or Ladakh) is now moot. The hybrid approach stays in place for the road ribbon (section 14.5), where no equivalent verified-accurate native data source exists. This is a recommendation, not a re-opening of the user's "Hybrid (Recommended)" decision; the user chose hybrid as the general policy, and this simply resolves which half of that policy applies to which asset, consistent with the plan's own fallback rule.
J-R3	No distinct public "Eternal Limited" logo could be found; the saved `eternal.png` is actually Zomato's logo (Zomato being one of Eternal Limited's constituent brands)	Wherever this logo is used (for example, the DTU recruiter-proof slide), it is labelled "Zomato" or "Zomato (Eternal Limited)", never presented as if a separate "Eternal" brand mark exists. This matches how the brief itself and BeyondTech's own site refer to this recruiter (as "Eternal" in text but the public-facing consumer brand is Zomato).

#	Finding	Ruling
J-R4	DCG (DTU Consulting Group) and 180 Degrees Consulting DTU chapter logos remain MISSING after 3 search attempts each	Both get the standard dashed "<Name> logo" placeholder slot per PLAN.md section 14.7; no further search effort is warranted given the attempts already made. If Harsh has the DCG logo on hand (it is the co-organiser of this exact competition), it may be added to `BT/deck/assets/logos/` manually before Stage 2 build; this is noted as an open item.
J-R5	The india-maps-data GitHub repository used for the GeoJSON has no stated licence, only a README disclaimer describing the data as curated "for personal usage"	Acceptable for this non-commercial, student case-competition deliverable. The doc's methods/limitations section (section 27) notes this once as a minor asset-sourcing caveat, consistent with the project's existing practice of flagging every imperfect source rather than treating silence as resolution.

Confirmed, no action needed

- Founder identity: "Harsh Agarwal" is confirmed distinct from an unrelated "Harsh Agrawal" (ML researcher) by both the planning session's original search and V-A's re-check (RA50). No file in this project should ever write a bare "Harsh" for the founder, per PLAN.md section 2.3.
- All 8 Drive resource links are confirmed genuinely open to the public (RA24, corrected by the lead's direct curl check), not merely unconfirmed. Insight I2 (PLAN.md section 4.5, "the top of the funnel has no net") stands fully verified, not just plausible.
