EUROGRIP × UNSTOP COLLABORATION

Case Study 4

Building a Scalable & Cost-Effective Influencer Advocacy Ecosystem — Mechanics & Puncture Shops | Domestic Two-Wheeler Market

Background

Mechanics and puncture shops are one of the most frequented touchpoints in a two-wheeler rider's ownership journey — the mechanic most often becoming the person recommending which tyre to buy at the moment of replacement. This makes them a powerful but informal advocacy channel: highly influential, but typically unstructured, inconsistent, and hard to place on the same plans as their peers.

Eurogrip's ~~own~~ brand-track research among mechanics points to a real opportunity ~~here~~. Brand awareness is lukewarm, mechanic preferences / recommendations are not much in favour of Eurogrip. Building a more structured, sustainable advocacy ecosystem with this touchpoint is a genuine opportunity to convert an already-trusted channel into a lasting driver of brand preference.

The Challenge

How should Eurogrip build a scalable, cost-effective advocacy ecosystem with mechanics and puncture shops across India — one that drives genuine, lasting brand recommendation by this touchpoint without relying on high-cost, one-off incentives that are hard to sustain or track?

Insights from Eurogrip's Mechanic Brand-Track Study

- Awareness among mechanics is average / lukewarm, but Eurogrip's tyre stocking lags well behind competing brands — the opportunity lies in converting awareness into stocking and recommendation.
- ~~Mechanic preferences for brand support have shifted: functional support — tools and equipment to change tyres — has overtaken cash and pricing incentives as the top-ranked way mechanics want to be supported by a brand.~~
- Preference for brand-visibility items (branded merchandise, display boards, uniforms) is rising quickly — mechanics increasingly value association and status, not just utility or money.
- A meaningful share of brand advocacy already comes from mechanics who don't even stock Eurogrip tyres — showing that influence and stocking are not the same thing, and advocacy can be built independent of inventory commitment.

What Students Will Need to Research

- The approximate scale of the mechanic/puncture-shop universe in India (numbers, geographic spread, degree of fragmentation).
- Realistic cost benchmarks for tools/equipment and branded merchandise programs to run at scale.
- How similar advocacy or incentive programs are structured in adjacent categories (for example, auto parts, lubricants, batteries). Or any benchmark programs by competing brands.

Challenges

Budget	Assume 1.5%–2% of the relevant business-unit revenue as a realistic marketing/GTM budget benchmark.
Scalability	Solution must be scalable nationally, not a boutique program limited to a few cities.
Sustainability	Must include a way to sustain advocacy over time, not just a one-time sign-up incentive.
Measurability	Must include some mechanism to track or estimate program effectiveness, even if not a perfect measurement system.

Format & Timeline

Round 1 — Executive Summary + Video Submission

- 1-page executive summary of the strategic approach.
- 2-minute video pitch — precise and direction-focused, not a polished production. The purpose is to convey clarity of thinking, not creativity or presentation quality at this stage.

Round 2 — Detailed Submission (1–2 weeks)

- A strategy deck of up to 15 slides (excluding annexures), covering: the program structure, incentive design, scale/rollout plan, and budget allocation.

Evaluation Criteria

These criteria apply to the Round 2 submission and are meant to help judges score entries consistently.

Criterion	What we're looking for
Incentive realism	Would mechanics and puncture-shop owners actually engage with this structure?
Insight-grounding	Does the approach build on the actual mechanic preference shift — toward tools/equipment and brand visibility, away from pure cash — rather than defaulting to cash incentives?
Scalability	Could this genuinely work at a national level within the given budget?
Sustainability	Does advocacy persist beyond the first incentive, or does it fade once the initial hook wears off?
Measurability	Is the tracking/measurement approach feasible, even if imperfect?
