Modeling Clarification

The original Project Satoshi Gate case document remains the governing source of truth for all case facts, transaction terms, constraints, and stated modeling inputs.

Where the case does not specify a parameter necessary to evaluate one of the proposed transaction structures or scenarios, teams may make reasonable assumptions, provided those assumptions are clearly disclosed in their presentation. Teams should not replace, override, or substitute external figures for any inputs expressly provided in the case.

Any proposed financing structure, minority/JV economics, valuation methodology, earn-out/CVR structure, WACC, or other unstated parameter should be treated as a team assumption rather than a case fact.

Teams should include a dedicated assumptions slide listing all material assumptions used in their financial model and should show breakeven on both an accounting (PAT) and cash (FCF) basis.
