Three weekly numbers show by mid February whether March clears zero: orders above 1,838 a week, returns under 5.5% and fewer than half of Good phones needing a battery

1 ORDERS A WEEK

1,923 our plan, all channels

Change course at: 1,838 a week, two weeks running

Why: March EBITDA falls below ₹0: a 10.5% order rise instead of 16.6%

Then: check the report sits above the price on every listing; move store and referral effort to report demos

2 RETURN RATE

4.5% our plan, all channels

Change course at: 5.5% in any week

Why: the board's limit is 6.0%, reached only if B1 and B2 keep 74% of today's returns

Then: find the channel: creators return 1.5 times the website rate; retest batteries in that batch

3 GOOD PHONES NEEDING A BATTERY

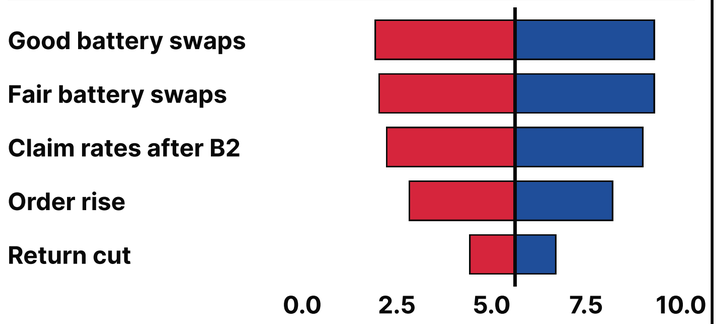

40% Exhibit 6, our plan

Change course at: 50% in any week

Why: March EBITDA falls to +₹1.9 lakh, and to zero at 55%

Then: read batteries at intake and buy weak-battery Good phones at a lower price

WHAT MOVES MARCH EBITDA, ₹ LAKH

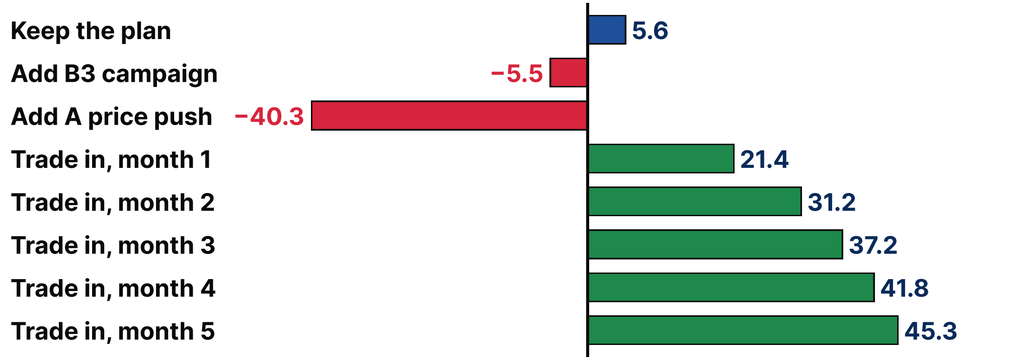

Red: the input 25% worse. Blue: 25% better. No single input takes March below zero; all five worse together give −8.7 ₹ lakh.

THREE SCENARIOS, ₹ LAKH

	Bear	Base	Bull
Feb EBITDA	−8.7	5.6	20.5
Mar EBITDA	−8.7	5.6	20.5
Q1 vs nothing	−29.2	−0.5	+29.2
Mar returns	5.3%	4.5%	3.8%
All tests	Fail	Pass	Pass

Bear: every uncertain effect 25% worse at once. The weekly numbers show it by the second week of February.

APRIL OPTIONS, EBITDA ₹ LAKH A MONTH

In April, on new growth money: launch C trade in (₹35 lakh setup, repaid in about 2.2 months); keep A and B3 off; keep the third shift.

Source: team model 9b3628d94d (T17 to T20) | weekly = monthly / 4.33 (A13) | stress tests move uncertain effects 25% (A16) | April assumes new growth money (A15)
