Project DOBAARA: numerical rebuild card

Model 9b3628d94d. Case-only calculations, before GST. Independent audit: 31 checks passed. Work in rupees first and divide by 100,000 only when presenting company totals in lakh. Keep full precision until the final display. [C-R4, C-F8, T2, T4, T15]

Page 1: rebuild the starting position

1. Superb contribution before marketing

Begin with selling price and deduct the wholesale purchase, testing and repair, packing and payment, expected warranty expense and expected return expense. The website return rate applies here. [C-E2, C-E2N1, C-E2N2]

₹24,000 − ₹17,800 − ₹800 − ₹600 − (3% × ₹2,500) − (4% × ₹1,800) = ₹4,653.

Expected warranty expense is ₹75 and expected return expense is ₹72. A return costs ₹1,800 only on the returned share. The case recovers the sale on resale, so do not subtract another ₹24,000 or reverse revenue. Good rebuilds to ₹2,524 and Fair to ₹716 by the same method. These contributions precede marketing and commission. [T2, C-E2N2, C-E2N3]

2. Monthly baseline EBITDA

Rebuild channel orders by grade, then apply each channel's own return multiplier. For performance ads, 2,600 orders split into 520 Superb, 1,040 Good and 1,040 Fair. Their phone contribution is 520 × ₹4,653 + 1,040 × ₹2,524 + 1,040 × ₹716 = ₹5,789,160. Deduct the channel's ₹6,000,000 fixed spend to obtain −₹210,840. [C-E3, T4]

Use the same procedure for all channels. MegaKart also deducts 12% of actual selling price, creators use 1.5 times grade return rates, stores use half the grade return rates, and referrals deduct ₹350 per delivered order. [C-E3N2, C-E3N3, C-E3N4, C-E3N5]

Channel	Contribution after marketing, rupees	Source
Performance ads	−210,840	T4
MegaKart	462,600	T4
Creators	1,023,480	T4
Stores	1,257,500	T4
Referrals	1,853,565	T4
Total	4,386,305	T4

Deduct company fixed costs of ₹5,800,000 to obtain −₹1,413,695. The channel total is ₹43.86305 lakh and EBITDA is −₹14.13695 lakh. [C-CO4, T4, T5]

3. Weighted return rate

Weight returns by delivered grade and channel. Ads: 520 × 4% + 1,040 × 7% + 1,040 × 13% = 228.8 expected returns. MegaKart adds 188, creators 86.4, stores 31.25 and referrals 47.95. Total expected returns are 582.4. Divide by 7,200 delivered phones: 8.0888889%, presented as 8.1%. Expected counts can be fractional; they are model averages. [T5, C-D2]

Page 2: rebuild the recommendation

4. Recommended March EBITDA

B1 and B2 multiply orders: 1.08 × 1.08 = 1.1664. Apply this combined multiplier once to the eligible base demand. Their return factors also multiply: 0.70 × 0.80 = 0.56. This leaves 56% of the former rate, a 44% reduction. Superb demand is rationed first to the 2,000 supply limit; the remaining delivered total is 8,328, below the third shift's 9,000 sellable capacity. [C-E6H2, C-E6H4, T15, T22]

B2 increases Superb and Good prices by 4%. Its battery costs apply to the stated replacement shares. B1 costs ₹120 on every delivered phone. Recompute warranty and returns for each channel-grade cell, apply MegaKart commission to changed prices, then deduct unchanged channel fixed spend and referral coupons. March contribution after marketing is ₹72.6049980833 lakh. [T11, T15, T21]

₹72.6049980833 lakh − ₹58 lakh company fixed costs − ₹9 lakh shift = ₹5.6049980833 lakh, displayed as +₹5.6 lakh. Growth items are charged once; do not deduct the shift again inside channel contribution. [C-D1, C-E6H3, T15]

5. Q1 growth money

January pays ₹15 lakh B1 setup and ₹25 lakh B2 setup. February and March each pay ₹9 lakh for the third shift. Total growth money is ₹15 + ₹25 + ₹9 + ₹9 = ₹58 lakh. The unused budget is ₹80 − ₹58 = ₹22 lakh. Reports, replacement batteries and other per-phone operating costs are already in contribution, rather than this growth ledger. [C-E6H3, T15]

6. Q1 comparison with doing nothing

Use full-precision monthly EBITDA. January retains baseline operations and deducts ₹40 lakh setup. February and March each earn the modelled operating result after the shift cost. Recommended Q1 EBITDA is −₹42.9269538334 lakh, displayed as −₹42.9 lakh. Doing nothing totals −₹42.41085 lakh, displayed as −₹42.4 lakh. The difference is −₹0.5161038334 lakh, displayed as −₹0.5 lakh. March passes the operating break-even test while Q1 remains slightly worse because setup is paid immediately. [T13, T15, C-F15]

A team member should explain each denominator, timing rule and cost layer before quoting the rounded result. Compliance is conditional on the claim-by-claim controls in Exhibit 5. A model flag is insufficient proof that those controls were executed. [C-R5, C-F19, C-T4t, C-E5a, C-E5f]
