Mentee Group – Class VIII Students

About Mentor:

HIMANSHU is astudent from the Electronic communication branch in the Delhi TechnologicalUniversity.

About Mentee:

1. **pawan sharma** Studentof class VIII at Government Co-Ed Sarvodaya Vidyalaya.
2. **vandana** Student of class VIII at Government Co-Ed Sarvodaya Vidyalaya.
3. **jitu giri** Studentof class VIII at Government Co-Ed Sarvodaya Vidyalaya.

Mentee's Needs and Challenges:+

- **Awareness, not just rules**—They need to understand *why* certain online behaviors arerisky, notjust be told"don'tdo this." They should recognize phishing, fake profiles, scams, and manipulative content; managing privacy settings.
- **A safe space to ask questions** — Many hesitate to talk to parents/teachers about online experiences (cyberbullying, inappropriate content, strangers messaging them) for fear of losing device access or being blamed. They relate better to real, age-appropriate scenarios than abstract warnings.
- **Emotional literacy** — Understanding how online interactions affect mental health, self-esteem, and peer pressure (e.g., social comparison, FOMO).
- **Peer pressure** — Pressure to share personal info, photos, or engage in risky challenges/trends to fit in.
- **Limited risk perception** — Teens often underestimate long-term consequences of oversharing or engaging with strangers online.
- **Cyberbullying & online conflict** — Both as potential victims and unknowing perpetrators.
- **Misinformation & manipulation** — Difficulty distinguishing credible sources from misleading content, especially on social media. Not fully grasping that online actions (posts, comments, shares) can have lasting real-world impact.
- **Balancing trust and caution** — Learning to stay open and social online while still being alert to red flags.

Focus Area:

The mentoring programme focuses on Staying Safe in the digital world driven by an initial assessment revealing that lack of awarness is rampant even among the new generation regarding the online world.

Planned Weekly Approach:

Week	Goal	Planned Activity
Week 1	Understanding the Digital World & Privacy	Build awarenessof what personal information is, why it matters, and how digital spaces work.
Week 2	Recognizing Threats — Scams, Fake Profiles & Cyberbullying	Help students identify red flags in online interactions and understand what cyberbullying looks like (as victim, bystander, or perpetrator).
Week 3	Digital Footprint, Misinformation & Mental Well-being	Build critical thinking around content consumption and awareness of online behavior's impact on mental health.
Week 4	Cyber Hygiene, Safe Practices & What to Do When Things Go Wrong	Equip students with practical protective tools and clear steps to take if something goes wrong online

SubsequentSessions	Continuous mentoring.	Provide ongoing mentorship.

Early Observations:

As I began this course with Class 9 students, I encountered a wide range of digital exposure among them some were highly active across multiple platforms, while others had limited or supervised access, which created uneven starting points for our group discussions. I noticed that many students displayed overconfidence in their tech knowledge, assuming they were already "safe" online, which led to some initial resistance toward the safety advice I shared. At the same time, I found that students were reluctant to openly share personal experiences of cyberbullying or uncomfortable online interactions, likely due to embarrassment or fear of judgment, so I used anonymous formats to encourage more honest responses. I also observed that peer influence played a strong role at this age, often shaping how seriously students took certain topics based on group reactions rather than individual understanding. I noticed that awareness of real-world consequences varied widely some students clearly connected their online actions to long-term impact, while others did not. I found that engagement was higher during interactive, visual, or activity-based sessions compared to lecture-style explanations, with attention often dipping during theory-heavy discussions. I also remained mindful that sensitive topics such as cyberbullying, body image, or screen addiction resonated personally with some students, so I stayed observant and avoided singling anyone out
